最新的免費下載IDP考題 &安全的IDP考題：CrowdStrike Certified Identity Specialist(CCIS) Exam

如果你選擇了報名參加CrowdStrike IDP 認證考試，你就應該馬上選擇一份好的學習資料或培訓課程來準備考試。因為CrowdStrike IDP 是一個很難通過的認證考試，要想通過考試必須為考試做好充分的準備。

想獲得CrowdStrike IDP認證，就來VCESoft網站！為您提供最好的學習資料，讓您不僅可以通過IDP考試，還可以在短時間內獲得良好的成績。我們已經幫助很多的考生順利順利通過IDP考試，獲取證書，這是一個難得的機會。現在，購買CrowdStrike IDP題庫之后，您的郵箱會收到我們的郵件，您可以及時下載您購買的IDP題庫并訪問，這樣可以全面地了解詳細的考試試題以及答案。

>> 免費下載IDP考題 <<

免費下載IDP考題 - 保證高通過率

我們VCESoft的CrowdStrike的IDP考試培訓資料是以PDF和軟體格式提供，它包含VCESoft的CrowdStrike的IDP考試的試題及答案，你可能會遇到真實的IDP考試，這些問題堪稱完美，和可行之的有效的方法，在任何CrowdStrike的IDP考試中獲得成功，VCESoft CrowdStrike的IDP 全面涵蓋所有教學大綱及複雜問題，VCESoft的CrowdStrike的IDP 考試的問題及答案是真正的考試挑戰，你必須要擦亮你的技能和思維定勢。

最新的 CrowdStrike CCIS IDP 免費考試真題 (Q15-Q20):

問題 #15
Which of the following areNOTincluded within the three-dot menu on Identity-based Detections?
Which of the following are not included within the three-dot menu on Identity-based Detections?

- A. Edit status
- B. Add exclusion
- C. Add comment
- D. Add to Watchlist

答案：D

解題說明：
In Falcon Identity Protection, thethree-dot (#) action menuon anidentity-based detectionprovides analysts with a limited set of actions that applydirectly to the detection itself. According to the CCIS curriculum, these actions are designed to support investigation workflow, tuning, and documentation.
The supported actions in the detection-level three-dot menu include:
* Edit status, which allows analysts to update the detection state (for example, New, In Progress, or Closed).
* Add comment, which enables collaboration and documentation directly on the detection.
* Add exclusion, where supported, to suppress future detections that match known benign behavior.
Add to Watchlistisnot includedin this menu because watchlists are applied toentities(such as users, service accounts, or endpoints), not to detections. Watchlists are managed from entity views or investigation workflows and are used to increase visibility and

monitoring priority for specific identities-not to act on individual detections.
This distinction is emphasized in CCIS training to reinforce the separation betweenentity-centric actionsand detection-centric actions.
Because watchlists operate at the entity level,Option Bis the correct and verified answer.

問題 #16
Which of the followingBESTindicates that this user has an established baseline?

- A. The user has recent logon activity on ETIS-WS03
- B. The user has a risk score of 6.4
- C. The user has endpoints that they are considered owners of
- D. The user was found logging into five endpoints

答案：C

解題說明：
In Falcon Identity Protection, auser baselineis established by observing consistent and repeatable behavior over time, including authentication patterns, endpoint associations, and usage context. According to the CCIS curriculum, one of the strongest indicators that a user has an established baseline is the presence ofendpoints for which the user is identified as an owner.
Endpoint ownership is determined through historical authentication behavior and usage frequency. When Falcon identifies that a user consistently logs into specific endpoints over time, those endpoints are marked as owned, which signifies that sufficient historical data exists to confidently model the user's normal behavior.
This ownership relationship is only created after Falcon has observed the user long enough to establish a reliable baseline.
The other options do not definitively indicate a baseline:
* Logging into multiple endpoints may occur during initial discovery or anomalous activity.
* A risk score reflects current risk posture, not baseline maturity.
* Recent logon activity alone does not imply historical consistency.
Becauseendpoint ownership requires sustained, predictable behavior over time, it is the clearest indicator that Falcon has successfully established a user baseline. Therefore,Option Bis the correct and verified answer.

問題 #17
How many days will an identity-based incident be suppressed if new events related to the same incident occur?

- A. 14 days
- B. 5 days
- C. 7 days
- D. 30 days

答案：B

解題說明：
Falcon Identity Protection usesincident suppression windowsto prevent alert fatigue while still maintaining accurate incident tracking.
According to the CCIS documentation, whennew events related to an existing identity-based incident occur, the incident issuppressed for 5 days.
This suppression means that Falcon does not generate a new incident for the same activity during this window. Instead, additional detections areadded to the existing incident, allowing analysts to view the full progression of the threat in a single investigative context.
The 5-day suppression window ensures that ongoing identity attacks-such as repeated authentication abuse or lateral movement-are consolidated rather than fragmented across multiple incidents. This improves investigation efficiency and aligns with Falcon's incident lifecycle management approach.
Because the suppression period is fixed at5 days,Option Dis the correct and verified answer.

問題 #18
What setting can be switched under the Domain Security Overview for each Active Directory domain and/or Azure tenant?

- A. Privileged Identities
- B. Domains
- C. Scope

- D. Goal

答案：C

解題說明：
In the Domain Security Overview,Scopeis a configurable setting that allows administrators toswitch between Active Directory domains and Azure tenants. This capability is essential for organizations managing multiple identity environments, as it enables targeted risk assessment and comparison across different identity infrastructures.
The CCIS documentation explains that Scope determineswhich domain or tenant's identity data is displayedin the Overview dashboard, including risk scores, trends, and prioritized remediation guidance.
Changing the scope does not alter risk calculations; it simply refocuses the analysis on the selected identity environment.
Other options are incorrect because:
* Privileged Identities represent a subset of users, not a switchable setting.
* Domains are entities, not a dashboard control.
* Goal changes how risks are evaluated, not which environment is displayed.
By allowing granular control over which domain or tenant is analyzed, Scope supports accurate identity risk management in complex, hybrid environments. Therefore,Option Dis the correct answer.

問題 #19
Which of the following IDaaS connectors will allow Identity to ingest cloud activity along with applying SSO Policy?

- A. Okta SSO
- B. SAML
- C. Azure NPS
- D. ADFS

答案：A

解題說明：
Falcon Identity Protection integrates withIdentity-as-a-Service (IDaaS)providers to ingest cloud authentication activity and enforce identity-based policies. According to the CCIS curriculum,Okta SSOis a supported IDaaS connector that enables Falcon to ingestcloud authentication eventswhile also applying Single Sign-On (SSO) policies.
Okta SSO provides rich identity telemetry, including login attempts, device context, and authentication outcomes. This data allows Falcon Identity Protection to correlate on-premises and cloud-based identity activity, extending identity risk analysis beyond Active Directory.
The other options are incorrect:
* ADFSis an on-premises federation service, not a cloud IDaaS.
* Azure NPSis used for RADIUS-based MFA, not SSO ingestion.
* SAMLis a protocol, not an IDaaS connector.
Because Okta SSO provides both cloud activity ingestion and SSO enforcement,Option Bis the correct and verified answer.
