Identity-and-Access-Management-Architect Actual Test Answers & Reliable Identity-and-Access-Management-Architect Test Dumps

Quitters never win and winners never quit. If you are determined to clear Identity-and-Access-Management-Architect exam and obtain a certification you shouldn't give up because of one failure. If you are willing, our Salesforce Identity-and-Access-Management-Architect valid exam simulations file can help you clear exam and regain confidence. Every year there are thousands of candidates choosing our products and obtain certifications so that our Identity-and-Access-Management-Architect valid exam

simulations file is famous for its high passing-rate in this field. If you want to pass exam one-shot, you shouldn't miss our files.

Salesforce Certified Identity and Access Management Architect Sample Questions (Q25-Q30):

NEW QUESTION # 25

Universal Containers want users to be able to log in to the Salesforce mobile app with their Active Directory password. Employees are unable to use mobile VPN.

Which two options should an identity architect recommend to meet the requirement?

Choose 2 answers

- A. Salesforce Trigger & Field on Contact Object
- B. Configure Cloud Provider Load Balancer
- C. Active Directory Password Since Plugin
- D. Salesforce Identity Connect

Answer: C,D

Explanation:

If users must log in to the Salesforce mobile app with their Active Directory credentials and cannot rely on a mobile VPN, the architecture usually combines Salesforce Identity Connect with the appropriate Active Directory authentication plug-in or federation integration that allows Salesforce to honor those AD credentials without direct VPN dependency. Identity Connect helps bridge AD user management into Salesforce, while the directory-side authentication component handles password validation against Active Directory. Custom triggers or load balancers do not solve the identity problem. The important architecture idea is that workforce users should continue using their corporate directory password, and Salesforce should trust that directory-driven authentication path in a mobile-friendly way. This is why options A, B work together as the correct solution.

NEW QUESTION # 26

Universal Containers uses Salesforce as an identity provider and Concur as the Employee Expense management system. The HR director wants to ensure Concur accounts for employees are created only after the appropriate approval in the Salesforce org.

Which three steps should the identity architect use to implement this requirement?

Choose 3 answers

- A. Create an approval process for user object associated with the provisioning flow.
- B. Create an approval process for UserProvisioningRequest object associated with the provisioning flow.
- C. Create an approval process for a custom object associated with the provisioning flow.
- D. Create a connected app for Concur in Salesforce.
- E. Enable User Provisioning for the connected app.

Answer: B,D,E

Explanation:

User provisioning is a feature that allows Salesforce to create, update, or deactivate user accounts on a third-party system, such as Concur, based on user assignments in Salesforce. To implement user provisioning for Concur with an approval process, the identity architect should use the following steps:

* Create a connected app for Concur in Salesforce. A connected app is an application that integrates with Salesforce using APIs and standard protocols, such as SAML, OAuth, and OpenID Connect. To create a connected app for Concur, you need to provide the basic information, such as the app name, logo URL, contact email, and API name. You also need to enable SAML and configure the SAML settings, such as the entity ID, ACS URL, and subject type.

* Enable User Provisioning for the connected app. This step allows you to configure the user provisioning settings for the connected app, such as the provisioning API endpoint URL, the client ID and client secret, the mapping of user attributes, and the linkage rules. You can also choose to require an approval process for user provisioning requests by selecting the Approval Required option.

* Create an approval process for UserProvisioningRequest object associated with the provisioning flow. A UserProvisioningRequest object represents a user provisioning request that is sent to or received from a third-party system. An approval process specifies the steps necessary for a record to be approved and whom must approve it at each step. To create an approval process for UserProvisioningRequest object, you need to define the approval steps, assignees, actions, criteria, and email alerts.

NEW QUESTION # 27

Northern Trail Outfitters (NTO) believes a specific user account may have been compromised. NTO inactivated the user account and needs U perform a forensic analysis and identify signals that could indicate a breach has occurred. What should NTO's first step be in gathering signals that could indicate account compromise?

- A. Download the Login History and evaluate the details of logins performed by the user.
- B. Download the Identity Provider Event Log and evaluate the details of activities performed by the user.
- C. Download the Setup Audit Trail and review all recent activities performed by the user.
- D. Review the User record and evaluate the login and transaction history.

Answer: A

Explanation:

The Experience ID is a unique identifier for each Experience Cloud site that can be used to customize the branding and user interface based on the OAuth/Open ID or SAML flows. The Experience ID can be passed as a URL parameter to Salesforce to determine which site the user is accessing. References: Experience ID, Customize Your Experience Cloud Site Login Process

NEW QUESTION # 28

Universal Containers (UC) has built a custom based Two-factor Authentication (2fa) system for their existing on-premise applications. They are now implementing Salesforce and would like to enable a Two-factor login process for it, as well. What is the recommended solution an architect should consider?

- A. Replace the custom 2fa system with Salesforce 2fa for on-premise application and Salesforce.
- B. Use the custom 2fa system for on-premise applications and native 2fa for Salesforce.
- C. Replace the custom 2fa system with an app exchange app that supports on-premise applications and Salesforce.
- D. Use custom login flows to connect to the existing custom 2fa system for use in Salesforce.

Answer: D

NEW QUESTION # 29

Universal Containers (UC) uses Salesforce to allow customers to keep track of the order status. The customers can log in to Salesforce using external authentication providers, such as Facebook and Google. UC is also leveraging the App Launcher to let customers access an on-platform application for generating shipping labels.

The label generator application uses OAuth to provide users access. What license type should an Architect recommend for the customers?

- A. Identity license
- B. Customer Community Plus license
- C. External Identity license
- D. Customer Community license

Answer: C

Explanation:

D is correct because External Identity license is designed for customers who need to log in to Salesforce using external authentication providers, such as Facebook and Google. External Identity license also supports App Launcher, which allows customers to access other applications from Salesforce using OAuth or OpenID Connect.

A is incorrect because Customer Community license is designed for customers who need to access data and records in Salesforce, such as cases, accounts, and contacts. Customer Community license does not support App Launcher or external authentication providers.

B is incorrect because Identity license is designed for employees who need to access multiple applications from Salesforce using SSO and App Launcher. Identity license does not support external authentication providers or customer data access.

C is incorrect because Customer Community Plus license is designed for customers who need to access data and records in Salesforce, as well as collaborate with other customers and partners. Customer Community Plus license does not support App Launcher or external authentication providers.
