Reliable Process-Automation Valid Test Test & Perfect Salesforce Certification Training - The Best Salesforce Salesforce Process Automation Accredited Professional

Our Process-Automation study braindumps can be very good to meet user demand in this respect, allow the user to read and write in a good environment continuously consolidate what they learned. Our Process-Automation prep guide has high quality. So there is all effective and central practice for you to prepare for your test. With our professional ability, we can accord to the necessary testing points to edit Process-Automation Exam Questions. It points to the exam heart to solve your difficulty. So high quality materials can help you to pass your exam effectively, make you feel easy, to achieve your goal.

Salesforce Process Automation Accredited Professional Sample Questions

(Q134-Q139):

NEW QUESTION # 134
What should an Administrator do to allow the value of a variable to be get by sources that started the flow?

- A. Select "Available for input" checkbox
- B. Select "Field is required" checkbox
- C. Select "Available for output" checkbox
- D. Select 'Allow Multiple Values" checkbox

Answer: A

NEW QUESTION # 135
The Salesforce Admin needs to automate a process that sends an approval request to the VP of Sales for any account record that changes from Prospect to New Customer. What process automation capabilities would the Admin use to meet this requirement?

- A. Use an Apex Trigger to change the Account field value from "prospect" to "customer" and email the Account Owner as a reminder to get an approval from their Manager.
- B. Use a Record Trigger Flow to change the Account field value from "prospect" to "customer" and email the Account Owner.
- C. Use o Process to monitor t changed field value on the Account object from "prospect" to "customer" and an action to submit the record to an Approval Process
- D. Use a Flow to update the field and trigger on Approval Process to notify the VP of Sales.

Answer: D

Explanation:
To automate the process of sending an approval request when an Account record changes from Prospect to New Customer, the best approach would be to use Salesforce Flow to update the Account field value and then trigger an Approval Process to notify the VP of Sales. This approach allows for a more flexible and powerful automation compared to using Apex Triggers or Process Builder alone. Salesforce Flow can detect record changes and perform complex logic, including updating records and initiating approval processes. The Approval Process can then be configured to send an approval request to the VP of Sales. This solution aligns with Salesforce's best practices for leveraging declarative automation tools before resorting to code.Reference: Salesforce Help Documentation on Flow and Approval Processes.

NEW QUESTION # 136
Ursa Major Solar is automating a complex business process. The Administrator discovers that flows needed for the orchestration already exist in the org; however, they cannot create the orchestration in Flow Builder. What could be causing this issue?

- A. "Orchestration" is disabled under Flow Builder settings in the Setup.
- B. The Administrator is missing the "Manage Flow" permission.
- C. One or more existing flows have a reference to an External Object.
- D. The org does not have "LEX for Flows" add-in activated for all users.

Answer: B

NEW QUESTION # 137
Which global variable contains the record's values immediately before the flow users run?

- A. $Record
- B. $Record__Prior
- C. $RIORVALUE Formula Field
- D. $Flow

Answer: B

Explanation:
In Salesforce Flows, the global variable that contains the record's values immediately before the flow runs is $Record__Prior. This

variable is particularly useful in record-triggered flows, where you may need to compare the current state of a record with its previous state to determine what action to take.Reference: Salesforce Help - Use PriorValue in Record-Triggered Flows

NEW QUESTION # 138

The Salesforce Admin needs to automate a process that sends an approval request to the VP of Sales for any account record that changes from Prospect to New Customer. What process automation capabilities would the Admin use to meet this requirement?

- A. Use a Record-Triggered Flow to change the Account field value from "Prospect" to "Customer" and email the Account Owner.
- B. Use a Process to monitor the changed field value on the Account object from "Prospect" to "Customer" and an action to submit the record to an Approval Process.
- C. Use an Apex Trigger to change the Account field value from "Prospect" to "Customer" and email the Account Owner as a reminder to get an approval from their Manager.
- D. Use a Flow to update the field and trigger an Approval Process to notify the VP of Sales.

Answer: B

NEW QUESTION # 139

......
