

Exam 350-701 Discount, 350-701 Exam Dumps Provider

P.S. Free & New 350-701 dumps are available on Google Drive shared by PrepAwayTest: https://drive.google.com/open?id=1Q0s6q_4Hq_tkdkBOZIR_jV4zX3hbcwAk

PrepAwayTest beckons exam candidates around the world with our attractive characters. Our experts made significant contribution to their excellence. So we can say bluntly that our 350-701 simulating exam is the best. Our effort in building the content of our 350-701 study materials lead to the development of learning guide and strengthen their perfection. So our simulating exam is definitely making your review more durable. To add up your interests and simplify some difficult points, our experts try their best to design our 350-701 Study Material to help you pass the 350-701 exam.

For a long time, high quality is our 350-701 exam questions constantly attract students to participate in the use of important factors, only the guarantee of high quality, to provide students with a better teaching method, and at the same time the 350-701 practice quiz brings more outstanding teaching effect. Our high-quality 350-701 learning guide help the students know how to choose suitable for their own learning method, our 350-701 study materials are a very good option.

Quiz 350-701 - Fantastic Exam Implementing and Operating Cisco Security Core Technologies Discount

Our 350-701 learning quiz is the accumulation of professional knowledge worthy practicing and remembering, so you will not regret choosing our 350-701 study guide. The best way to gain success is not cramming, but to master the discipline and regular exam points of question behind the tens of millions of questions. Our 350-701 Preparation materials can remove all your doubts about the exam. If you believe in our products this time, you will enjoy the happiness of success all your life

Cisco Implementing and Operating Cisco Security Core Technologies Sample Questions (Q88-Q93):

NEW QUESTION # 88

An organization has a Cisco Stealthwatch Cloud deployment in their environment. Cloud logging is working as expected, but logs are not being received from the on-premise network, what action will resolve this issue?

- A. Deploy a Cisco FTD sensor to send events to Cisco Stealthwatch Cloud
- **B. Deploy a Cisco Stealthwatch Cloud sensor on the network to send data to Cisco Stealthwatch Cloud**
- C. Configure security appliances to send NetFlow to Cisco Stealthwatch Cloud
- D. Configure security appliances to send syslogs to Cisco Stealthwatch Cloud

Answer: B

Explanation:

Explanation

Explanation

You can also monitor on-premises networks in your organizations using Cisco Stealthwatch Cloud. In order to do so, you need to deploy at least one Cisco Stealthwatch Cloud Sensor appliance (virtual or physical appliance).

NEW QUESTION # 89

What is a functional difference between Cisco AMP for Endpoints and Cisco Umbrella Roaming Client?

- A. AMP for Endpoints authenticates users and provides segmentation, and the Umbrella Roaming Client allows only for VPN connectivity.
- **B. AMP for Endpoints stops and tracks malicious activity on hosts, and the Umbrella Roaming Client tracks only URL-based threats.**
- C. The Umbrella Roaming Client authenticates users and provides segmentation, and AMP for Endpoints allows only for VPN connectivity
- D. The Umbrella Roaming client stops and tracks malicious activity on hosts, and AMP for Endpoints tracks only URL-based threats.

Answer: B

Explanation:

Cisco AMP for Endpoints and Cisco Umbrella Roaming Client are both security solutions that protect mobile users from threats, but they have different functions and features. Cisco AMP for Endpoints is a cloud-managed endpoint security solution that stops and tracks malicious activity on hosts, such as malware execution, file behavior, and command-and-control callbacks. It also provides threat intelligence, sandboxing, and retrospective analysis to detect and respond to advanced threats. Cisco Umbrella Roaming Client is a lightweight DNS client that tracks only URL-based threats, such as phishing, ransomware, and botnets. It prevents connections to malicious domains and IP addresses, and provides visibility and enforcement for off-network devices. It also integrates with Cisco AnyConnect VPN client to provide seamless protection for VPN and non-VPN traffic. Therefore, the functional difference between Cisco AMP for Endpoints and Cisco Umbrella Roaming Client is that AMP for Endpoints stops and tracks malicious activity on hosts, and the Umbrella Roaming Client tracks only URL-based threats. NEW QUESTION # 90

Which two application layer preprocessors are used by Firepower Next Generation Intrusion Prevention System? (Choose two)

- A. inline normalization
- **B. SIP**
- C. packet decoder
- D. modbus
- **E. SSL**

Answer: B,E

Explanation:

Reference:

<https://www.cisco.com/c/en/us/td/docs/security/firepower/60/configuration/guide/fpmc-config-guidev60/Applica> uses many preprocessors, including DNS, FTP/Telnet, SIP, SSL, SMTP, SSH preprocessors.

NEW QUESTION # 91

An engineer needs to configure an access control policy rule to always send traffic for inspection without using the default action. Which action should be configured for this rule?

- A. monitor
- B. block
- C. allow
- D. trust

Answer: C

Explanation:

<https://www.cisco.com/c/en/us/td/docs/security/firepower/623/configuration/guide/fpmc-config-guide-v623/acce> the first three access control rules in the policy-Monitor, Trust, and Block-cannot inspect matching traffic. Monitor rules track and log but do not inspect network traffic, so the system continues to match traffic against additional rules to determine whether to permit or deny it <https://www.cisco.com/c/en/us/td/docs/security/firepower/623/configuration/guide/fpmc-config-guide-v623/acce>

NEW QUESTION # 92

Why should organizations migrate to a multifactor authentication strategy?

- A. Multifactor authentication methods of authentication are never compromised
- B. Biometrics authentication leads to the need for multifactor authentication due to its ability to be hacked easily
- C. Single methods of authentication can be compromised more easily than multifactor authentication
- D. Multifactor authentication does not require any piece of evidence for an authentication mechanism

Answer: C

Explanation:

Multifactor authentication (MFA) is a security measure that requires two or more proofs of identity to grant access to a resource, such as a username and password, a one-time code, a smart card, etc.1 MFA provides stronger protection than single-factor authentication (SFA), which only requires one proof of identity, such as a password. SFA can be compromised more easily by attackers who can guess, steal, or intercept passwords, or use phishing or social engineering techniques to trick users into revealing their credentials. MFA adds an extra layer of security that makes it harder for attackers to gain access, even if they have the password. MFA can also prevent unauthorized access from lost or stolen devices, as the attacker would need another factor to authenticate. MFA can also deter attackers from targeting an organization, as they would need to invest more time and resources to bypass the security measures. Therefore, organizations should migrate to a multifactor authentication strategy to enhance their security posture and protect their data and assets. References :
