Salesforce is a cloud-based customer relationship management (CRM) software company that provides various products and services to its clients. One of the significant components of Salesforce is its Identity and Access Management (IAM) system that helps organizations manage user access and authentication to their Salesforce applications. The Salesforce Identity-and-Access-Management-Architect (IAM) certification is designed to validate the skills and knowledge required to build and implement secure IAM solutions on the Salesforce platform.

Our experts will fully consider the gradual progress of knowledge and create the most effective learning plan on the Identity-and-Access-Management-Architect exam questions for you.

Salesforce Certified Identity and Access Management Architect Sample Questions (Q43-Q48):

NEW QUESTION # 43

Northern Trail Outfitters (NTO) recently purchased Salesforce Identity Connect to streamline user provisioning across Microsoft Active Directory (AD) and Salesforce Sales Cloud.

NTO has asked an identity architect to identify which Salesforce security configurations can map to AD permissions.

Which three Salesforce permissions are available to map to AD permissions?

Choose 3 answers

- A. Sharing Rules
- B. Field-Level Security
- C. Profiles and Permission Sets
- D. Roles
- E. Public Groups

Answer: C,D,E

NEW QUESTION # 44

Universal Container's (UC) is using Salesforce Experience Cloud site for its containerwholesale business. The identity architect wants to an authentication provider for the new site.

Which two options should be utilized in creating an authentication provider?

Choose 2 answers

- A. The default authentication provider certificate can be set.
- B. A custom error URL can be set.
- C. A custom registration handler can be set.
- D. The default login user can be set.

Answer: B,C

Explanation:

An authentication provider is a configuration that allows users to log in to Salesforce using an external identity provider, such as Facebook, Google, or a custom one. When creating an authentication provider, two options that can be utilized are:

* A custom registration handler, which is a class that implements the Auth.RegistrationHandler interface and defines how to create or update users in Salesforce based on the information from the external identity provider.

* A custom error URL, which is a URL that users are redirected to when an error occurs during the authentication process.

NEW QUESTION # 45

Universal Containers (UC) is considering a Customer 360 initiative to gain a single source of the truth for its customer data across disparate systems and services. UC wants to understand the primary benefits of Customer 360 Identity and how it contributes to a successful Customer 360 Truth project.

What are two key benefits of Customer 360 Identity as it relates to Customer 360?

Choose 2 answers

- A. Customer 360 Identity enables an organization to build a single login for each of its customers, giving the organization an understanding of the user's login activity across all its digital properties and applications.
- B. Customer 360 Identity automatically integrates with Customer 360 Data Manager and Customer 360 Audiences to seamlessly populate all user data.
- C. Customer 360 Identity supports multiple brands so you can deliver centralized identity services and correlation of user activity, even if it spans multiple corporate brands and user experiences.
- D. Customer 360 Identity not only provides a unified sign up and sign in experience, but also tracks anonymous user activity prior to signing up so organizations can understand user activity before and after the users identify themselves.

Answer: A,C

Explanation:

Customer 360 Identity is a cloud-based identity service that provides a single, trusted identity for customers across all your digital properties and applications². Customer 360 Identity has several benefits that relate to Customer 360, such as³:

* Customer 360 Identity enables an organization to build a single login for each of its customers, giving the organization an understanding of the user's login activity across all its digital properties and applications. This helps to create a unified customer profile and deliver personalized experiences based on user preferences and behaviors³.

* Customer 360 Identity supports multiple brands so you can deliver centralized identity services and correlation of user activity, even if it spans multiple corporate brands and user experiences. This helps to maintain brand consistency and loyalty while providing seamless access to your products and services³.

NEW QUESTION # 46

The security team at Universal Containers (UC) has identified exporting reports as a high-risk action and would like to require users to be logged into Salesforce with their Active Directory (AD) credentials when doing so.

For all other uses of Salesforce, users should be allowed to use AD credentials or Salesforce credentials. What solution should be recommended to prevent exporting reports except when logged in using AD credentials while maintaining the ability to view reports when logged in with Salesforce credentials?

- A. Use SAML Federated Authentication with a login flow to dynamically add or remove a permission set that grants the export reports permission.
- B. Use SAML Federated Authentication, treat SAML sessions as high assurance, and raise the session level required for exporting reports.
- C. Use SAML Federated Authentication and Custom SAML JIT provisioning to dynamically add or remove a permission set that grants the Export Reports permission.
- D. Use SAML Federated Authentication and block access to reports when accessed through a standard assurance session.

Answer: D

NEW QUESTION # 47

An organization has a central cloud-based Identity and Access Management (IAM) Service for authentication and user management, which must be utilized by all applications as follows:

- 1 - Change of a user status in the central IAM Service triggers provisioning or deprovisioning in the integrated cloud applications.
- 2 - Security Assertion Markup Language single sign-on (SSO) is used to facilitate access for users authenticated at identity provider (Central IAM Service).

Which approach should an IAM architect implement on Salesforce Sales Cloud to meet the requirements?

- A. Configure Salesforce as a SAML Service Provider, and enable SCIM (System for Cross-Domain Identity Management) for provisioning and deprovisioning of users.
- B. Configure central IAM Service as an authentication provider and extend registration handler to manage provisioning and

deprovisioning of users.

- C. Configure Salesforce as a SAML service provider, and enable Just-in Time (JIT) provisioning and deprovisioning of users.
- D. Deploy Identity Connect component and set up automated provisioning and deprovisioning of users, as well as SAML-based SSO.

Answer: A

NEW QUESTION # 48

.....

In order to meet the requirements of our customers, Our Identity-and-Access-Management-Architect test questions carefully designed the automatic correcting system for customers. It is known to us that practicing the incorrect questions is very important for everyone, so our Identity-and-Access-Management-Architect exam question provide the automatic correcting system to help customers understand and correct the errors. If you want to improve your correct rates of exam, we believe the best method is inscribed according to the fault namely this in appearing weak sports, specific aim ground consolidates knowledge is nodded. Our Identity-and-Access-Management-Architect Guide Torrent will help you establish the error sets. We believe that it must be very useful for you to take your exam, and it is necessary for you to use our Identity-and-Access-Management-Architect test questions.
