

# CDCP Exam Overview & New CDCP Exam Notes

## Mastering Your GAQM CDCP Exam Practice Questions: A Guide to Effective Preparation

The data center industry is continually developing, and experts in this sector are expected to be on the cutting edge of technology and best practices. Earning the GAQM CDCP (Certified Data Centre Professional) certification is one method to demonstrate your knowledge and dedication to quality. This prestigious certification opens doors to exciting career opportunities in data center management. In this comprehensive guide, we'll explore the importance of effective preparation for the GAQM CDCP exam and provide valuable insights into using [GAQM CDCP exam practice questions](#) as a powerful tool to achieve success.

### Why GAQM CDCP Certification Matters

Before we get into test prep, let's take a moment to examine why GAQM CDCP certification is so highly valued in the market. Businesses rely significantly on data centers to store and manage essential data, and the landscape is always changing. This places a premium on

For candidates who buy CDCP exam bootcamp online, they may have the concern about the money safety. We apply the international recognition third party for the payment, and it will protect the interests of you. Therefore you put your mind at rest if you buy CDCP exam bootcamp from us. In addition, we have free demo for you to have a try, so that you can have a deeper understanding the complete version of the CDCP Exam Dumps. If you have any other questions, just contact us, and we will do what we can do to help you.

We offer 24 - hour, 365 – day online customer service to every user on our CDCP study materials. Our service staff will help you solve the problem about the CDCP training materials with the most professional knowledge and enthusiasm. We believe that can completely dispel your worries on CDCP Exam Braindumps. So please feel free to contact us if you have any trouble on our CDCP practice questions.

## Valid Certified Data Centre Professional (CDCP) test answers, valid CDCP exam dumps

Currently we release the latest CDCP reliable exam answers for the test which not only cover the accurate study guide but also include more than 80% questions and answers of the real test. If it is still difficult for you to pass exam, or if you are urgent to clear exam in a short at first attempt, our CDCP Reliable Exam Answers will be your only valid choice. Don't hesitate again. Our buyers are companies and candidates from all over the world. It is the best methods for passing exam.

## EXIN Certified Data Centre Professional (CDCP) Sample Questions (Q65-Q70):

### NEW QUESTION # 65

What is the most preferred unit of measure for cooling capacity?

- A. Horsepower
- B. BTU
- C. Ton
- D. Watt

**Answer: D**

Explanation:

Cooling capacity is the measure of a cooling system's ability to remove heat from a space. The most preferred unit of measure for cooling capacity is watt (W), which is the SI unit for power. Watt is defined as the amount of energy transferred or converted per unit time. One watt is equal to one joule of energy per second. Using watt as the unit of measure for cooling capacity allows for easy comparison and calculation of the cooling performance and efficiency of different cooling systems.

Other units of measure for cooling capacity are ton, BTU, and horsepower, but they are less common and less convenient than watt. Ton is a unit of measure that describes how much water at freezing temperature can be frozen in 24 hours, equivalent to 3.5 kW or 12,000 BTU/h. BTU (British Thermal Unit) is a unit of measure that describes the amount of heat required to raise the temperature of one pound of water by one degree Fahrenheit, equivalent to 0.293 W. Horsepower is a unit of measure that describes the rate at which work is done, equivalent to 746 W.

### NEW QUESTION # 66

What type of heat does ICT equipment generate?

- A. Latent heat
- B. Both latent and sensible heat
- C. Radiant heat
- D. Sensible heat

**Answer: D**

Explanation:

According to the Certified Data Centre Professional (CDCP) reference materials, ICT (Information and Communication Technology) equipment such as servers, switches, and storage devices generate sensible heat.

Sensible heat is the heat energy that causes a change in temperature of the air but does not contribute to humidity or moisture content. This is in contrast to latent heat, which involves a change in moisture (humidity) in the air, such as from evaporation or condensation.

ICT equipment does not introduce moisture into the environment; it only raises the temperature of the surrounding air, making it sensible heat. Proper data center cooling focuses on removing this sensible heat load to maintain optimal equipment operating conditions. Latent heat loads, such as those from people or water leaks, are typically not generated by ICT equipment and are managed differently in facility design.

Radiant heat is a minor consideration and typically refers to heat transferred by electromagnetic waves (e.g., from sunlight or hot surfaces), not the primary mode of heat transfer from ICT equipment, which is primarily through convection (airflow) and is measured as sensible heat.

### NEW QUESTION # 67

Escape route signage should be placed where?

- A. Only at the main entrance of the data centre building
- **B. At every door providing a pathway**
- C. At every door including riser doors, doors of storage closets etc.
- D. Only at emergency escape doors

**Answer: B**

Explanation:

Escape route signage should be placed at every door providing a pathway to the exit or the assembly area, according to the CDCP Preparation Guide<sup>1</sup> and the EU Safety/Health Signs Directive<sup>2</sup>. Escape route signage is used to guide the occupants of the data centre from wherever they are in the building, via a place of relative safety (the escape route), to the place of ultimate safety (the assembly area). Escape route signage should not be limited to only emergency escape doors or the main entrance of the data centre building, as these may not be accessible or visible from all locations. Escape route signage should also not include doors that do not lead to the exit or the assembly area, such as riser doors, doors of storage closets, or doors of other rooms, as these may confuse or mislead the occupants. Escape route signage should be placed at every door that provides a pathway to the exit or the assembly area, and should indicate the direction and distance of the escape route using pictograms, arrows, and words. Escape route signage should also be designed and installed in accordance with the relevant standards and codes, such as BS 5499 and ISO 7010.

### NEW QUESTION # 68

Mean time between failures is best considered a measure of

- A. Cost
- B. Duration
- **C. Reliability**
- D. Size

**Answer: C**

Explanation:

Mean time between failures (MTBF) is a measure of the reliability of a system or component. It represents the average time that a system or component will operate before it fails. The higher the MTBF, the more reliable the system or component is. MTBF is calculated by dividing the total time of operation by the number of failures that occur during that time. MTBF is used to compare the reliability of similar systems or components, and to help with maintenance planning, inventory management, and system design.

### NEW QUESTION # 69

What is a requirement of an FM200 (HFC-227) installation?

- A. Install the gas containers (tanks) close to the data centre.
- B. Drainage system under the raised floor.
- C. Install pre-action sprinklers in the same room as the FM200.
- **D. It is a high-pressure gas; therefore nozzles must be mounted with two brackets.**

**Answer: D**

Explanation:

FM200 (HFC-227) is a clean agent fire suppression system that uses a high-pressure gas to extinguish fires by reducing the oxygen concentration and absorbing the heat. FM200 is stored in cylinders at pressures of up to 42 bar (600 psi) and is released through nozzles into the protected area. Because of the high pressure, the nozzles must be mounted with two brackets to prevent them from moving or breaking during discharge. The brackets must be securely attached to the ceiling

or wall and aligned with the nozzle outlet. The nozzle outlet must also be free of any obstructions that could affect the discharge pattern or distribution.
