Salesforce certification Data-Architect exam training programs

If you want to constantly improve yourself and realize your value, if you are not satisfied with your current state of work, if you still spend a lot of time studying and waiting for Data-Architect qualification examination, then you need our Data-Architect material, which can help solve all of the above problems. I can guarantee that our study materials will be your best choice. Our Data-Architect Study Materials have three different versions, including the PDF version, the software version and the online version, to meet the different needs, our products have many advantages, I will introduce you to the main characteristics of our Data-Architect research materials.

Salesforce Data-Architect is a highly regarded certification that is recognized globally. It is designed for professionals who specialize in data architecture and management within the Salesforce platform. Salesforce Certified Data Architect certification is known for its rigorous testing and evaluation process, making it a highly sought-after credential in the industry.

Salesforce Certified Data Architect Sample Questions (Q173-Q178):

NEW QUESTION # 173

Universal Containers keeps its Account data in Salesforce and its Invoice data in a third -party ERP system. They have connected the Invoice data through a Salesforce external object. They want data from both Accounts and Invoices visible in one report in one place. What two approaches should an architect suggest for achieving this solution? Choose 2 answers

- A. Create a separate Salesforce report for Accounts and Invoices and combine them in a dashboard.
- B. Create a report in an external system combining Salesforce Account data and Invoice data from the ERP.
- C. Create a Visualforce page combining Salesforce Account data and Invoice external object data.
- D. Create a report combining data from the Account standard object and the Invoices external object.

Answer: B,C

Explanation:

Creating a report in an external system combining Salesforce Account data and Invoice data from the ERP, and creating a Visualforce page combining Salesforce Account data and Invoice external object data are two approaches that an architect can suggest for achieving this solution. Both of these approaches can display data from both Accounts and Invoices in one place, using either an external reporting tool or a custom web page.

Creating a report combining data from the Account standard object and the Invoices external object is not possible because Salesforce does not support reporting on external objects. Creating a separate Salesforce report for Accounts and Invoices and combining them in a dashboard is not ideal because it will not show the data in one report, but rather in two separate components.

NEW QUESTION # 174

Universal Containers would like to remove data silos and connect their legacy CRM together with their ERP and with Salesforce. Most of their sales team has already migrated to Salesforce for daily use, although a few users are still on the old CRM until some functionality they require is completed. Which two techniques should be used for smooth interoperability now and in the future.

- A. Do not connect Salesforce and the legacy CRM to each other during this transition period, but do allow both to interact with the ERP.
- B. Work with stakeholders to establish a Master Data Management plan for the system of record for specific objects, records, and fields.
- C. Specify the legacy CRM as the system of record during transition until it is removed from operation and fully replaced by Salesforce.
- D. Replicate ongoing changes in the legacy CRM to Salesforce to facilitate a smooth transition when the legacy CRM is eventually retired.

Answer: B,C

Explanation:

Specify the legacy CRM as the system of record during transition until it is removed from operation and fully replaced by Salesforce. This is a good technique to ensure data consistency and avoid conflicts between the two systems. Work with stakeholders to establish a Master Data Management plan for the system of record for specific objects, records, and fields. This is another good technique to define the data governance and stewardship policies and processes for managing data quality and integrity across multiple systems

NEW QUESTION # 175

NTO need to extract 50 million records from a custom object everyday from its Salesforce org. NTO is facing query timeout issues while extracting these records.

What should a data architect recommend in order to get around the time out issue?

- A. The REST API to extract data as it automatically chunks records by 200.
- B. Use a custom auto number and formula field and use that to chunk records while extracting data.
- C. Use ETL tool for extraction of records.
- D. Ask SF support to increase the query timeout value.

Answer: C

Explanation:

The best solution to extract 50 million records from a custom object everyday from Salesforce org without facing query timeout issues is to use an ETL tool for extraction of records. ETL stands for extract, transform, and load, and it refers to a process of moving data from one system to another. An ETL tool is a software application that can connect to various data sources, perform data transformations, and load data into a target destination. ETL tools can handle large volumes of data efficiently and reliably, and they often provide features such as scheduling, monitoring, error handling, and logging. Using a custom auto number and formula field and use that to chunk records while extracting data is a possible workaround, but it requires creating additional fields and writing complex queries. The REST API can extract data as it automatically chunks records by 200, but it has some limitations, such

as a maximum of 50 million records per query job6. Asking SF support to increase the query timeout value is not feasible because query timeout values are not configurable

NEW QUESTION # 176

Which API should a data architect use if exporting 1million records from Salesforce?

- A. Streaming API
- B. Bulk API
- C. SOAP API
- D. REST API

Answer: B

Explanation:

Using Bulk API to export 1 million records from Salesforce is the best option. Bulk API is a RESTful API that allows you to perform asynchronous operations on large sets of data. You can use Bulk API to create, update, delete, or query millions of records in batches. Bulk API is optimized for performance and scalability, and it can handle complex data loading scenarios.

NEW QUESTION # 177

Universal Containers has successfully migrated 50 million records into five different objects multiple times in a full copy sandbox. The Integration Engineer wants to re-run the test again a month before it goes live into Production. What is the recommended approach to re-run the test?

- A. Truncate all 5 objects quickly and re-run the data migration test.
- B. Truncate all 5 objects and hard delete before running the migration test.
- C. Hard delete all 5 objects' data and re-run the data migration test.
- D. Refresh the full copy sandbox and re-run the data migration test.

Answer: D

Explanation:

The recommended approach to re-run the test is to refresh the full copy sandbox and re-run the data migration test. A full copy sandbox is a replica of the production Org, including all data, metadata, and attachments.

Refreshing a full copy sandbox means creating a new copy of the production Org and replacing the existing sandbox. This would ensure that the test is run on a clean and up-to-date environment, without any leftover data or configuration from previous tests. Truncating or hard deleting objects would not be sufficient, because they would not remove all the data or metadata from the sandbox, and they could also affect other dependent objects or processes.

NEW QUESTION # 178

.....

In order to facilitate the wide variety of users' needs the Data-Architect study guide have developed three models with the highest application rate in the present - PDF, software and online. Online mode of another name is App of study materials, it is developed on the basis of a web browser, as long as the user terminals on the browser, can realize the application which has applied by the Data-Architect simulating materials of this learning model, users only need to open the App link, you can quickly open the learning content in real time in the ways of the Data-Architect study materials.
