### EMC Dell PowerEdge Foundations v2 Exam Sample Questions (Q72-Q77):

#### NEW QUESTION # 72

An administrator is tasked with updating firmware on several remote servers without interrupting the operating system. Which method should they use?

- A. Clone the OS configuration
- B. Implement OpenManage Enterprise
- C. Utilize iDRAC
- D. Set up System Setup

**Answer: C**

Explanation:

The Integrated Dell Remote Access Controller (iDRAC) allows administrators to update firmware on PowerEdge servers remotely without interrupting the operating system. iDRAC's out-of-band management enables firmware updates via its web interface or CLI, ensuring minimal disruption. OpenManage Enterprise requires additional software and is for broader management, System Setup requires local access and may interrupt operations, and cloning OS configuration is unrelated to firmware updates. iDRAC is the most efficient method for remote, non-disruptive updates. Exact extract: "Describe different methods of updating firmware and drivers in PowerEdge Servers... Compare the PowerEdge Servers management applications, utilities, and licensing." Reference: Dell PowerEdge Foundations v2 Exam Description (D-PE-FN-01), Topic: Maintenance (18%).
