시험패스에 유효한 CLT합격보장 가능 시험대비자료 덤프공부자료

인재도 많고 경쟁도 많은 이 사회에, 업계인재들은 인기가 아주 많습니다. 하지만 팽팽한 경쟁률도 무시할 수 없습니다. 많은 MSSC인재들도 어려운 인증시험을 패스하여 자기만의 자리를 지키고 있습니다. 우리 Pass4Test에서는 마침 전문적으로 이러한 MSSC인사들에게 편리하게 시험을 CLT패스할수 있도록 유용한 자료들을 제공하고 있습니다.

MSSC CLT 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> Teamwork and Good Workplace Conduct to Solve Problems: This section of the exam measures skills of the Certified Logistics Associate and covers the professional behaviors and collaborative techniques needed to work effectively with colleagues and resolve common operational issues as a team.
주제 2	<ul style="list-style-type: none"> Safe Handling of Hazardous Materials: This section of the exam measures skills of the Certified Logistics Technician and covers the specific regulations, documentation, and protective measures required for storing and moving dangerous goods safely.
주제 3	<ul style="list-style-type: none"> Information Systems: This section of the exam measures skills of the Certified Logistics Associate and covers understanding and using the basic technology and software systems necessary to track, manage, and execute logistics operations, such as inventory or shipment records.
주제 4	<ul style="list-style-type: none"> Inventory Control: This section of the exam measures skills of the Certified Logistics Technician and covers the methods used to track stock levels, perform cycle counts, and reconcile inventory discrepancies to maintain high accuracy and prevent shortages or overstock.
주제 5	<ul style="list-style-type: none"> Evaluation of Transportation Modes (Truck, Air, Rail, Water): This section of the exam measures skills of the Certified Logistics Technician and covers the ability to compare and select the most appropriate transportation methods based on factors like cost, speed, and the nature of the freight being moved.
주제 6	<ul style="list-style-type: none"> Quality Control Principles: This section of the exam measures skills of the Certified Logistics Associate and covers the fundamental concepts used to monitor and ensure that goods and processes meet required quality standards and customer expectations.
주제 7	<ul style="list-style-type: none"> Packaging and Shipping: This section of the exam measures skills of the Certified Logistics Technician and covers the necessary techniques for securing goods safely for transit, selecting the right containers, and correctly labeling them for outbound transportation.
주제 8	<ul style="list-style-type: none"> Product Receiving: This section of the exam measures skills of the Certified Logistics Technician and covers the technical procedures for inspecting, verifying, documenting, and correctly transferring incoming shipments of goods into storage facilities.
주제 9	<ul style="list-style-type: none"> Product Storage: This section of the exam measures skills of the Certified Logistics Technician and covers the best practices for organizing, locating, and maintaining products within a warehouse to maximize space efficiency and minimize damage or loss.
주제 10	<ul style="list-style-type: none"> The World of Logistics and the Global Supply Chain: This section of the exam measures skills of the Certified Logistics Associate and covers the foundational knowledge of how logistics fits into the broader global economy and the movement of goods from their origin to the final consumer.
주제 11	<ul style="list-style-type: none"> The Logistics Environment: This section of the exam measures skills of the Certified Logistics Associate and covers the standard operational setting, including the various facilities, equipment, and regulatory factors that affect daily logistics tasks.
주제 12	<ul style="list-style-type: none"> Measuring Weight & Volume: This section of the exam measures skills of the Certified Logistics Technician and covers the technical computations needed to correctly size packages and calculate accurate weight and cubic volume for shipping costs and load planning.
주제 13	<ul style="list-style-type: none"> Safe Material Handling and Equipment Operation: This section of the exam measures skills of the Certified Logistics Associate and covers the proper methods for safely moving materials and the correct operation of common handling equipment like forklifts and pallet jacks.
주제 14	<ul style="list-style-type: none"> Order Processing: This section of the exam measures skills of the Certified Logistics Technician and covers the steps required to accurately manage and fulfill customer requests, including picking and preparing the correct items for dispatch.

최신 Certified Logistics Technician CLT 무료샘플문제 (Q86-Q91):

질문 # 86

HAZMATs that are not stored or transported in bulk must be individually labeled. Which of the following is NOT a basic labeling requirement?

- A. cannot be covered by any other marking
- B. must be clearly visible
- C. includes the material symbol at the top of the label
- D. must be written with a black Sharpie marker

정답: D

설명:

CLT aligns with DOT/OSHA rules: hazardous materials packages require durable, clearly visible, and unobstructed markings/labels that communicate hazard class, proper shipping name/UN ID (as applicable), and pictograms/symbols per standards. There is no requirement specifying a particular marker brand or handwriting; labels must meet durability/legibility specifications, not be covered or obscured, and display the correct hazard symboling.

질문 # 87

Pick-to-light systems provide a fast and accurate way to do which of the following?

- A. select house lighting schemes
- B. interface information to truck drivers
- C. automatically verify a correct pick
- D. calculate lighting brightness

정답: C

설명:

A Pick-to-Light (PTL) system is a semi-automated order fulfillment technology that uses light displays to guide workers to the correct picking locations. According to CLT's "Order Processing" materials, PTL increases speed and accuracy by illuminating the bin or slot containing the required item, while digital displays show quantity and confirmation buttons verify completion. This eliminates paper pick lists and reduces errors associated with manual documentation. Unlike systems that rely on visual searches or scanning after the fact, PTL enables real-time verification at the point of pick. The CLT curriculum emphasizes that these systems improve worker productivity and throughput while reducing training time. PTL technology integrates with the Warehouse Management System (WMS) to automatically update inventory balances and order status once confirmed.

질문 # 88

During the receiving process, after the materials are staged, all of the following are completed by the material handler EXCEPT

- A. check the materials against the order and Bill of Lading
- B. perform housekeeping in the staging area
- C. inspect material for damage
- D. check quantities

정답: B

설명:

The CLT "Product Receiving" activities outline that after materials are staged, handlers verify shipment accuracy, quantity, and condition against the purchase order and Bill of Lading. Inspection ensures quality control and discrepancy identification. While housekeeping is important for safety, it is not a functional step in the receiving verification process. The purpose of staging is to separate materials by order or destination, allowing organized inspection and documentation. CLT emphasizes accuracy and documentation at this stage, as errors during receiving propagate through the inventory system. Housekeeping tasks occur after receiving completion to maintain workplace order but are not part of the inspection checklist.

질문 # 89

Which of the following can improve order picking accuracy and productivity without implementing advanced technology?

- A. Pick task simplification
- B. Voice technology
- C. Pick-to-light systems
- D. Bar codes

정답: A

설명:

Pick task simplification is a key principle in CLT's "Order Processing" section that improves performance using process design rather than new technology. Simplifying tasks can involve standardizing pick paths, organizing items by frequency of use (ABC slotting), or minimizing travel distance through efficient layout design. These low-cost improvements yield significant gains in accuracy and throughput. Unlike technology-driven methods such as barcoding, voice, or light-directed picking, simplification focuses on reducing cognitive load and motion waste. CLT emphasizes lean principles-eliminating unnecessary steps and improving ergonomics-to create a more efficient, error-resistant workflow. Facilities that standardize labeling, bin locations, and sequence picking logically achieve higher accuracy with lower training requirements.

질문 # 90

If a delivery arrives unscheduled, the vehicle will be

- A. refused
- B. quickly redirected with little impact on other activities
- C. unloaded at the incorrect dock door
- D. delayed until the next open available slot

정답: D

설명:

Dock operations are time-phased. The CLT dispatch/tracking content underscores appointment control, door assignment, and trailer sequencing to avoid congestion and preserve service levels. When an unscheduled arrival occurs, standard practice is to hold the vehicle until a capacity slot opens without disrupting planned picks, pack waves, and outbound cutoffs. Automatic redirection "with little impact" is unrealistic in a tightly scheduled DC; blanket refusal is a site-specific policy, not the norm. Unloading at an "incorrect dock door" violates safety and process controls. Staging unscheduled arrivals into the next available slot aligns with appointment discipline while accommodating operational variability.
