We will give you reply as quickly as possible.

HashiCorp Certified: Terraform Associate (003) (HCTA0-003) Sample Questions (Q182-Q187):

NEW QUESTION # 182
Terraform configuration can only call modules from the public registry.

- A. True
- B. False

Answer: B

Explanation:
Terraform can call modules from various sources including the public Terraform Registry, private registries, local file paths, or version control systems like GitHub.
Reference:
Terraform Modules

NEW QUESTION # 183
Which of the following module source paths does not specify a remote module?

- A. Source = "hasicrop/consul/aws"
- B. Source = "githhub.comicrop/example"
- C. Source ="git@github.comhasicrop/example.git"
- D. Source = "module/consul"

Answer: D

Explanation:
The module source path that does not specify a remote module is source = "module/consul". This specifies a local module, which is a module that is stored in a subdirectory of the current working directory. The other options are all examples of remote modules, which are modules that are stored outside of the current working directory and can be accessed by various protocols, such as Git, HTTP, or the Terraform Registry. Remote modules are useful for sharing and reusing code across different configurations and environments.

NEW QUESTION # 184
Which two steps are required to provision new infrastructure in the Terraform workflow? Choose two correct answers.

- A. Plan
- B. Alidate
- C. Import
- D. Init
- E. apply

Answer: D,E

Explanation:
The two steps that are required to provision new infrastructure in the Terraform workflow are init and apply. The terraform init command initializes a working directory containing Terraform configuration files. It downloads and installs the provider plugins that are needed for the configuration, and prepares the backend for storing the state. The terraform apply command applies the changes required to reach the desired state of the configuration, as described by the resource definitions in the configuration files. It shows a plan of the proposed changes and asks for confirmation before making any changes to the infrastructure.
References = [The Core Terraform Workflow], [Initialize a Terraform working directory with init], [Apply Terraform Configuration with apply]

NEW QUESTION # 185
Which of these are features of HCP Terraform/Terraform Cloud? (Pick the 2 correct responses)

- A. Automatic backups of configuration and state.
- B. Automated infrastructure deployment visualization.
- C. A web-based user interface (UI).
- D. Remote state storage.

Answer: C,D

Explanation:
Terraform Cloud provides features like remote state storage and a web-based user interface for managing your Terraform runs. While it offers robust infrastructure as code capabilities, automatic backups of configuration and state are not directly provided by Terraform Cloud; instead, the state is stored remotely and secured.

Terraform Cloud Features

NEW QUESTION # 186
Where can Terraform not load a provider from?

- A. Official HashCrop Distribution on releases.hashcrop.com
- B. Source code
- C. Plugins directory
- D. Provider plugin chance

Answer: B

Explanation:
Explanation
This is where Terraform cannot load a provider from, as it requires a compiled binary file that implements the provider protocol. You can load a provider from a plugins directory, a provider plugin cache, or the official HashiCorp distribution on releases.hashicorp.com.

NEW QUESTION # 187
......

Certification has become a prerequisite for employment and career growth in the HashiCorp industry for reputable companies.
