A lot of people can't do a thing because they don't have the ability, the fact is, they don't understand the meaning of persistence, and soon give up. Our Plat-Admn-202 Latest Questions will help make you a persistent person. Change needs determination, so choose our Plat-Admn-202 training brandump quickly! Our Plat-Admn-202 exam questions can help you pass the Plat-Admn-202 exam without difficulty.

Salesforce Plat-Admn-202 Exam Syllabus Topics:

Topic	Details
-------	---------

Topic 1	<ul style="list-style-type: none"> • User Interface: This section of the exam measures the skills of Salesforce UI Designers and Lightning App Builders and covers the ways in which Salesforce interfaces can be customized to improve usability. It includes understanding available options for UI customization and demonstrating when to apply custom buttons, links, and actions. The domain also distinguishes between declarative and programmatic methods for incorporating Lightning components in applications, ensuring that the right approach is selected for different user interface needs.
Topic 2	<ul style="list-style-type: none"> • Salesforce Fundamentals: This section of the exam measures the skills of Salesforce Administrators and Junior Salesforce Consultants and covers the essential concepts needed to understand how Salesforce works at a foundational level. It focuses on recognizing when to use declarative tools versus programmatic customization, determining when AppExchange apps extend org capabilities, and understanding key methods for managing object, record, and field access. It also evaluates your ability to choose the right sharing model based on business needs and to apply reporting tools effectively, including report types and dashboards. Additionally, the domain reviews how to optimize the mobile experience through actions and layouts, and how Chatter can be used to support collaboration.
Topic 3	<ul style="list-style-type: none"> • Data Modeling and Management: This section of the exam measures the skills of Data Analysts and Salesforce Administrators and covers the core principles of designing and maintaining Salesforce data structures. It requires selecting the correct data model in various scenarios and understanding relationship types and how they influence reporting, record access, and the user interface. It also tests knowledge of field data types and the operational impact of changing them. The section includes evaluating the use of Schema Builder and understanding the considerations involved in importing and exporting data across internal and external sources.
Topic 4	<ul style="list-style-type: none"> • App Deployment: This section of the exam measures the skills of Release Managers and Salesforce Administrators and covers the application lifecycle from planning through deployment. It requires determining the appropriate strategy when working with different sandboxes and managing milestones during development. Candidates must know when to use change sets and how to troubleshoot deployment issues. The section also includes understanding the implications of using unmanaged versus managed packages and selecting the correct deployment plan for various business scenarios.
Topic 5	<ul style="list-style-type: none"> • Business Logic and Process Automation: This section of the exam measures the skills of Process Automation Specialists and Salesforce Administrators and covers the key tools Salesforce provides to automate and enforce business logic. It focuses on using formula fields, roll-up summary fields, and validation rules to meet defined requirements. Candidates must also understand approval processes and know how to select the right automation tool to prevent conflicts or errors. The domain emphasizes evaluating business requirements and recommending automation solutions that maintain system stability and accuracy.

Salesforce Certified Platform App Builder Sample Questions (Q123-Q128):

NEW QUESTION # 123

After a deal is closed, Cloud Kicks (CK) wants to assign a user as a customer service manager (CSM) in addition to the account owner and would like a new field to easily track and report which CSM is assigned to the Account.

Which solution should an app builder use for this request?

- A. Picklist field
- B. Text field
- C. Lookup field
- D. Multi-select picklist field

Answer: C

Explanation:

The solution that an app builder should use for this request is a lookup field. A lookup field is a type of relationship field that links two objects together and allows users to select a record from another object. The app builder can create a lookup field on the account object that references the user object and allows users to assign a customer service manager (CSM) to the account. Option A is incorrect because a multi-select picklist field is not suitable for this request, as multi-select picklist fields allow users to select

multiple values from a predefined list, not from another object. Option B is incorrect because a picklist field is not suitable for this request, as picklist fields allow users to select one value from a predefined list, not from another object. Option D is incorrect because a text field is not suitable for this request, as text fields allow users to enter any alphanumeric characters, not from another object.

NEW QUESTION # 124

An app builder wants to add the option to 'Send New Email' from Leads, Contacts and Accounts for users on mobile. What is the benefit of using global actions to accomplish this?

- A. Global actions are record-specific and are available when searching that particular
- B. The global action's layout automatically clones the default page layout.
- C. Global actions can be accessed anywhere actions are pages, feed and Chatter groups,
- D. Salesforce Lightning Component Library houses existing global actions prebuild for use.

Answer: C

Explanation:

Global actions can be accessed anywhere actions are pages, feed and Chatter groups. This is correct because global actions are not tied to a specific object, and they can be added to any page that supports actions, such as record pages, home pages, feed pages, and Chatter groups.

NEW QUESTION # 125

An app builder is creating a custom object called Testimonial__c and wants to connect Testimonial__c records with both the submitter's Contact record and Account record. If the Account is deleted, the Testimonial__c should also be deleted. If the Contact is deleted, but the Account remains, the Testimonial__c should remain.

How should this be accomplished?

- A. Make Testimonial__c a junction object between Account and Contact using master-detail relationships.
- B. Make both the Contact and Account fields required on the Testimonial__c object and create lookup relationships from Testimonial__c to Contact and to Account.
- C. Create a lookup relationship from Testimonial__c to Account and a master-detail relationship from Testimonial__c to Contact.
- D. Create a master-detail relationship from Testimonial__c to Account and a lookup relationship from Testimonial__c to Contact.

Answer: D

Explanation:

To connect Testimonial__c records with both the submitter's Contact record and Account record, an app builder should create a master-detail relationship from Testimonial__c to Account and a lookup relationship from Testimonial__c to Contact. A master-detail relationship creates a parent-child relationship between two objects and allows for roll-up summary fields, sharing settings, and cascading actions. A lookup relationship creates a loose association between two objects and allows users to relate records from one object to another. Source

NEW QUESTION # 126

An app builder wants to create a custom Sync button on Account that will call a Lightning Web Component that connects with an external system. This action should only be available if the custom Status field is set to Ready to Sync.

What should an app builder use to add this functionality to an Account record page?

- A. Dynamic action
- B. Formula field
- C. AppExchange product
- D. Custom link

Answer: A

Explanation:

Dynamic actions are a new feature that allow app builders to create custom buttons or actions that can call Lightning Web

Components and display them conditionally based on field values or other criteria. Formula fields, AppExchange products, and custom links are not able to call Lightning Web Components.

NEW QUESTION # 127

When a sales rep submits an account for approval, Universal Containers wants the user to answer additional questions via a popup window to populate additional record fields.

What should an app builder use to achieve the desired result?

- A. Custom button and Flow
- B. Lightning component and Process Builder
- C. Process Builder and Flow
- D. Custom picklist field and Process Builder

Answer: A

Explanation:

The app builder should use a custom button and Flow to achieve the desired result. A custom button is a button that can invoke custom logic or actions when clicked by a user. A Flow is a type of automation tool that can guide users through a series of screens and perform actions based on user input. In this case, the app builder can create a custom button on the Account object that launches a Flow when clicked by a user. The Flow can display a popup window with questions for the user to answer and populate additional fields on the Account record based on the user input. Option A, B, and C are not tools that can achieve this result.

NEW QUESTION # 128

.....

The third format of ExamcollectionPass product is the desktop Salesforce Plat-Admn-202 practice exam software. You can access the Salesforce Certified Platform App Builder (Plat-Admn-202) practice exam after installing this software on your Windows computer or laptop.
