

F5CAB4 Latest Braindumps Questions | F5CAB4 New Test Camp

Isaca CISA - Braindumps Questions

Verifying the program can operate successfully with other parts of the system is sociability testing. Testing the program's functionality without knowledge of internal structures is black box testing. Controlled testing of programs in a semi-debugged environment, either heavily controlled step-by-step or via monitoring in virtual machines, is sand box testing.

Question No : 5 - (Topic 4)

When planning to add personnel to tasks imposing time constraints on the duration of a project, which of the following should be revalidated FIRST?

- A. The project budget
- B. The critical path for the project
- C. The length of the remaining tasks
- D. The personnel assigned to other tasks

Answer: B

Explanation:

Since adding resources may change the route of the critical path, the critical path must be reevaluated to ensure that additional resources will in fact shorten the project duration. Given that there may be slack time available on some of the other tasks not on the critical path, factors such as the project budget, the length of other tasks and the personnel assigned to them may or may not be affected.

Topic 5, IT SERVICE DELIVERY AND SUPPORT (116 PRACTICE QUESTIONS)

Question No : 6 - (Topic 5)

In a small organization, an employee performs computer operations and, when the situation demands, program modifications. Which of the following should the IS auditor recommend?

- A. Automated logging of changes to development libraries
- B. Additional staff to provide separation of duties
- C. Procedures that verify that only approved program changes are implemented
- D. Access controls to prevent the operator from making program modifications

Answer: C

Explanation:

While it would be preferred that strict separation of duties be adhered to and that additional

F5CAB4 Exam Dumps add vivid examples and accurate charts to stimulate those exceptional cases you may be confronted with. F5CAB4 Guide Torrent has been known as one of the world's leading providers of exam materials. F5CAB4 Test Questions free updating for one year and half price for further partnerships.

If you choose the help of VCETorrent, we will spare no effort to help you pass the exam. Moreover, we also provide you with a year of free after-sales service to update the exam practice questions and answers. Do not hesitate! Please select VCETorrent, it will be the best guarantee for you to pass F5CAB4 Certification Exam. Now please add VCETorrent to your shopping cart.

F5CAB4 New Test Camp - F5CAB4 Interactive Practice Exam

guide should be updated and send you the latest version. Our company has established a long-term partnership with those who have purchased our F5CAB4 exam questions. We have made all efforts to update our products in order to help you deal with any change, making you confidently take part in the F5CAB4 exam. Every day they are on duty to check for updates of F5CAB4 Study Materials for providing timely application. We also welcome the suggestions from our customers, as long as our clients propose rationally. We will adopt and consider it into the renovation of the F5CAB4 exam guide. Anyway, after your payment, you can enjoy the one-year free update service with our guarantee.

F5 F5CAB4 Exam Syllabus Topics:

| Topic | Details |
|---------|---|
| Topic 1 | <ul style="list-style-type: none"> Apply procedural concepts required to create, manage, and restore a UCS archive: This domain covers UCS backup and restore procedures, understanding backup use cases, proper storage practices, and UCS file contents including private keys. |
| Topic 2 | <ul style="list-style-type: none"> Identify configured system services: This domain covers verifying proper configuration of essential services including DNS, NTP, SNMP, and syslog. |
| Topic 3 | <ul style="list-style-type: none"> Given a scenario, determine device upgrade eligibility: This domain covers determining appropriate timing for software and platform upgrades and strategies to minimize downtime during upgrades. |
| Topic 4 | <ul style="list-style-type: none"> Identify and report current device status: This domain covers monitoring BIG-IP operational status through LCD panels, dashboards, Network Map, GUI TMSH commands, and checking high availability states. |
| Topic 5 | <ul style="list-style-type: none"> Given a scenario, interpret Service status: This section teaches interpreting service states, analyzing netstat output, and determining whether services are listening on specific ports. |
| Topic 6 | <ul style="list-style-type: none"> List which log files could be used to find events and or hardware issues: This section teaches identification of key log files (var log ltn, secure, audit), understanding event severity levels, and interpreting log messages. |

F5 BIG-IP Administration Control Plane Administration Sample Questions (Q50-Q55):

NEW QUESTION # 50

A BIG-IP Administrator receives an RMA replacement for a failed F5 device. The Administrator tries to restore a UCS taken from the previous device, but the restore fails. The following error appears in the /var/log/ltn:
insufficient pool members. 01070608:3: License is not operational
(expired, digital signature does not match contents)

What should the BIG-IP Administrator do to avoid this error? (Choose one answer)

- A. Reactivate the license on the new device using the manual activation method
- B. Use the appropriate tmsh command with the no-license option
- C. Remove the license information from the UCS archive
- D. Revoke the license prior to restoring

Answer: B

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents:

When restoring a UCS file to replacement hardware (RMA device), the license from the original device is not valid on the new system. If the UCS restore attempts to load the old license, BIG-IP reports license errors such as "License is not operational", which can prevent traffic objects (including pools and virtual servers) from loading correctly.

To avoid this issue, F5 documentation recommends restoring the UCS without the license, using the following command:

```
tmsh load /sys ucs <ucs filename> no-license
```

This approach:

Restores all configuration objects (LTM, networking, certificates, keys, etc.) Excludes the invalid license tied to the old hardware

Allows the administrator to activate a new license separately on the replacement device Why the other options are incorrect:

A . Remove the license information from the UCS archive

Not supported or recommended; UCS files should not be manually modified.

B . Revoke the license prior to restoring

License revocation does not prevent the UCS from attempting to load license data.

D . Reactivate the license on the new device using the manual activation method This must be done after restoring the UCS and does

not prevent the restore failure itself.
Therefore, the correct and supported method to avoid this error is C.

NEW QUESTION # 51

A BIG-IP Administrator defines a device Self IP. The Self IP is NOT reachable from the network. What should the administrator verify first?

- A. The correct Interface has been selected.
- B. Verify if auto last hop is disabled.
- C. The correct Trunk has been selected.
- **D. The correct VLAN has been selected.**

Answer: D

Explanation:

Connectivity management requires a proper logical-to-physical mapping within the BIG-IP Control Plane.

* VLAN Association: In TMOS, a Self IP address is not assigned directly to a physical interface. Instead, it is assigned to a VLAN (Virtual Local Area Network) object.

* Procedural Troubleshooting: If a Self IP is unreachable, the primary failure point is often that the IP was associated with the wrong VLAN, or the VLAN itself is not correctly associated with the intended physical interface or trunk.

* Layer 2 Mapping: The Control Plane requires the VLAN to be "up" and "untagged" or "tagged" on a valid interface for traffic to flow. If the administrator selects the incorrect VLAN, the Self IP will exist in the configuration but will be logically isolated from the physical network wire.

NEW QUESTION # 52

A BIG-IP Administrator must determine if a Virtual Address is configured to fail over to the standby member of a device group. In which area of the Configuration Utility can this be confirmed?

- A. Device Management > Devices
- **B. Local Traffic > Virtual Servers**
- C. Device Management > Overview
- D. Device Management > Traffic Groups

Answer: B

Explanation:

To report the current status of high availability for specific traffic, an administrator must verify the Traffic Group association. In the Configuration Utility, Virtual Server properties include the Virtual Address settings where the 'Traffic Group' is assigned. If the Virtual Address is assigned to a floating traffic group (like traffic-group-1), it is configured to fail over to the standby member.

NEW QUESTION # 53

A BIG-IP Administrator runs the initial configuration wizard and learns that the NTP servers were invalid.

In which area of the Configuration Utility should the BIG-IP Administrator update the list of configured NTP servers? (Choose one answer)

- A. System > Services
- **B. System > Configuration**
- C. System > Preferences
- D. System > Platform

Answer: B

Explanation:

On a BIG-IP system, NTP (Network Time Protocol) configuration is part of the system-level configuration settings. In the Configuration Utility, NTP servers are configured under the System configuration hierarchy.

The correct navigation path is:

System > Configuration > Device > NTP

This location allows the administrator to:

- * Add, modify, or remove NTP servers
 - * Ensure accurate system time synchronization
 - * Maintain proper time alignment required for features such as ConfigSync, HA failover, logging, and certificate validation Why the other options are incorrect:
 - * A. System > Platform is used for hardware-related settings.
 - * B. System > Preferences manages UI and user preferences.
 - * C. System > Services controls system daemons and services, not time configuration.
- Therefore, the correct answer is D. System > Configuration.

NEW QUESTION # 54

Which log file should the BIG-IP Administrator check to determine if a specific user tried to log in to the BIG-IP Configuration Utility? (Choose one answer)

- A. /var/log/secure
- B. /var/log/httpd
- C. /var/log/ltn
- D. /var/log/pam/tallylog

Answer: A

Explanation:

On BIG-IP systems, all authentication attempts for administrative access-including logins to the Configuration Utility (GUI)-are logged in /var/log/secure. This log file records:

- * Successful and failed login attempts
- * The username used
- * The authentication method (local, LDAP, RADIUS, etc.)
- * Access denials and PAM authentication errors

Why the other options are incorrect:

- * /var/log/pam/tallylog tracks account lockouts and failed attempt counters, not detailed login attempts.
 - * /var/log/ltn logs traffic management events, not administrative authentication.
 - * /var/log/httpd logs web server activity but does not record authentication success or failure for BIG-IP administrative users.
- Therefore, the correct log file to verify whether a user attempted to log in to the BIG-IP Configuration Utility is /var/log/secure.

NEW QUESTION # 55

.....

It is not a time to get scared of taking any difficult certification exam such as F5CAB4. The excellent study guides, practice questions and answers and dumps offered by VCETorrent are your real strength to take the test with confidence and pass it without facing any difficulty. Passing an F5CAB4 exam rewards you in the form of best career opportunities. A profile rich with relevant credentials opens up a number of career slots in major enterprises. VCETorrent's F5CAB4 Questions and answers based study material guarantees you career heights by helping you pass as many exams as you want.
