ExamCost's promise is to get you a wonderful success in M2 certification exams. Select any certification exam, our dumps and study guides will help you ace it in first attempt. No more cramming from books and note, just prepare our M2 Interactive Questions and answers and learn everything necessary to easily pass the actual M2 exam

International Code Council Commercial Mechanical Inspector Sample

Questions (Q12-Q17):

NEW QUESTION # 12

Unless listed for a greater or smaller dimension, mechanical draft venting systems shall terminate a minimum of _____ feet below an operable window.

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

Explanation:

For mechanical draft venting systems, unless the appliance is listed for a different clearance, the vent terminal must be located not less than 4 feet below, 4 feet horizontally from, or 1 foot above any door, operable window, or gravity air inlet into a building. Therefore, the required minimum distance below an operable window is 4 feet, so Option B is correct.

NEW QUESTION # 13

Floor furnaces shall not be closer than _____ inches to the ground.

- A. [option text not fully visible in the material you sent]
- B. 0
- **C. [option text not fully visible in the material you sent]**
- D. [option text not fully visible in the material you sent]

Answer: C

Explanation:

The ICC mechanical code requires the lowest portion of a floor furnace to have not less than 6 inches (152 mm) clearance from grade level. Therefore, the correct choice is the option corresponding to 6 inches, which is C based on your answer set.

NEW QUESTION # 14

Horizontal terminations for mechanical draft systems that are adjacent to public walkways shall be located a minimum of _____ feet above grade.

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

The fuel gas venting provisions state that the exit terminals of mechanical draft systems shall be not less than 7 feet above grade where located adjacent to public walkways. Therefore, A is the correct answer.

NEW QUESTION # 15

What is the maximum distance allowed below the design flood elevation from which ventilation may be obtained?

- A. 2 feet
- B. 0 inches
- **C. 1 foot**
- D. 6 inches

Answer: C

Explanation:

This question appears to contain a wording issue. In ICC flood-related provisions tied to ventilation/flood openings, the governing limit is that the opening location is not more than 1 foot relative to the reference grade condition used for flood-opening compliance. That corresponds to 1 foot, so Option C is the best-supported answer.

NEW QUESTION # 16

Given: a six-story, sprinklered, multifamily building with a continuously ventilated shaft extending vertically from the first floor to the roof and used for exhaust.

Which of the following requirements must also be met?

- A. have steel subducts with wall thickness of 0.0186 inch extending 22 inches horizontally into the shaft.
- B. kitchen exhaust that penetrates the shaft without a fire damper and extends vertically 12 inches.
- C. kitchen exhaust that penetrates the shaft without a fire damper and extends vertically 22 inches.
- D. fire dampers are installed that are connected to an emergency generator rated for 1 hour.

Answer: C

Explanation:

For this type of continuously ventilated exhaust shaft serving a multifamily building, the code requires the kitchen exhaust connection to penetrate the shaft and extend vertically not less than 22 inches without a fire damper. That matches Option D.

NEW QUESTION # 17

.....

Your eligibility of getting a high standard of career situation will be improved if you can pass the exam, and our M2 practice materials are your most reliable ways to get it. You can feel assertive about your exam with our 100 guaranteed professional M2 practice materials, let along various opportunities like getting promotion, being respected by surrounding people on your profession's perspective. All those beneficial outcomes come from your decision of our M2 practice materials.
