These 300-715 certification exam's benefits assist the 300-715 exam dumps to achieve their career objectives. To do this you just need to pass the Implementing and Configuring Cisco Identity Services Engine (300-715) exam which is quite challenging and demands complete 300-715 exam questions preparation. For the quick and complete Cisco 300-715 PDF Questions preparation you can get help from Prep4King. The Prep4King is a leading platform that offers valid, updated, and real 300-715 Questions that are particularly designed for quick and complete 300-715 exam preparation.

Individuals who pass 300-715 exam display a strong understanding of core ISE concepts, such as user authentication, authorization, and accounting (AAA). They can configure and manage policies for wired and wireless endpoints, guest access, and posture services, including endpoint compliance checks. Candidates can also integrate ISE with other security solutions like Cisco Firepower and AnyConnect to enhance the security posture of their organization.

Cisco 300-715 exam is designed to validate the knowledge and skills of IT professionals who are responsible for implementing and configuring Cisco Identity Services Engine (ISE). Implementing and Configuring Cisco Identity Services Engine certification exam is ideal for network administrators, security professionals, and engineers who want to enhance their knowledge of identity services and security policies. 300-715 Exam is designed to test the candidate's ability to use Cisco ISE to secure network access, automate security policies, and streamline network operations.

This free demo is a small part of the official complete Implementing and Configuring Cisco Identity Services Engine 300-715 training dumps. The free demo can show you the quality of our exam materials. You can download any time before purchasing.

Cisco Implementing and Configuring Cisco Identity Services Engine Sample Questions (Q247-Q252):

NEW QUESTION # 247

Select and Place

□

Answer:

Explanation:

□

NEW QUESTION # 248

An administrator is responsible for configuring network access for a temporary network printer. The administrator must only use the printer MAC address 50:89:65:18:8:AB for authentication. Which authentication method will accomplish the task?

- A. Profiling
- B. 802.1x
- **C. MAB**
- D. Posturing

Answer: C

NEW QUESTION # 249

An engineer is configuring the remote access VPN to use Cisco ISE for AAA and needs to conduct posture checks on the connecting endpoints. After the endpoint connects, it receives its initial authorization result and continues onto the compliance scan. What must be done for this AAA configuration to allow compliant access to the network?

- A. Configure the posture authorization so it defaults to unknown status
- **B. Enable dynamic authorization within the AAA server group**
- C. Fix the CoA port number
- D. Ensure that authorization only mode is not enabled

Answer: B

NEW QUESTION # 250

Which protocol must be allowed for a BYOD device to access the BYOD portal?

- A. SSH
- **B. HTTPS**
- C. HTTP
- D. SMTP

Answer: B

Explanation:

Section: BYOD

NEW QUESTION # 251

Which two task types are included in the Cisco ISE common tasks support for TACACS+ profiles? (Choose two.)

- **A. Shell**
- B. ASA
- **C. WLC**
- D. Firepower
- E. IOS

Answer: A,C

Explanation:

[https://www.cisco.com/c/en/us/td/docs/security/ise/2-](https://www.cisco.com/c/en/us/td/docs/security/ise/2-1/admin_guide/b_ise_admin_guide_21/b_ise_admin_guide_20_chapter_0100010.html)

[1/admin_guide/b_ise_admin_guide_21/b_ise_admin_guide_20_chapter_0100010.html](https://www.cisco.com/c/en/us/td/docs/security/ise/2-1/admin_guide/b_ise_admin_guide_21/b_ise_admin_guide_20_chapter_0100010.html) TACACS+ Profile TACACS+ profiles control the initial login session of the device administrator. A session refers to each individual authentication, authorization, or

accounting request. A session authorization request to a network device elicits an ISE response. The response includes a token that is interpreted by the network device, which limits the commands that may be executed for the duration of a session. The authorization policy for a device administration access service can contain a single shell profile and multiple command sets. The TACACS+ profile definitions are split into two components:

Common tasks

Custom attributes

There are two views in the TACACS+ Profiles page (Work Centers > Device Administration > Policy Elements > Results > TACACS Profiles)-Task Attribute View and Raw View. Common tasks can be entered using the Task Attribute View and custom attributes can be created in the Task Attribute View as well as the Raw View.

The Common Tasks section allows you to select and configure the frequently used attributes for a profile. The attributes that are included here are those defined by the TACACS+ protocol draft specifications. However, the values can be used in the authorization of requests from other services. In the Task Attribute View, the ISE administrator can set the privileges that will be assigned to the device administrator. The common task types are:

Shell

WLC

Nexus

Generic

The Custom Attributes section allows you to configure additional attributes. It provides a list of attributes that are not recognized by the Common Tasks section. Each definition consists of the attribute name, an indication of whether the attribute is mandatory or optional, and the value for the attribute. In the Raw View, you can enter the mandatory attributes using an equal to (=) sign between the attribute name and its value and optional attributes are entered using an asterisk (*) between the attribute name and its value. The attributes entered in the Raw View are reflected in the Custom Attributes section in the Task Attribute View and vice versa. The Raw View is also used to copy paste the attribute list (for example, another product's attribute list) from the clipboard onto ISE. Custom attributes can be defined for nonshell services.
