With the help of the CWNP CWDP-305 brain dumps and preparation material provided by FreePdfDump, you will be able to get CWNP CWDP Wi-Fi Design certified at the first attempt. Our CWNP experts have curated an amazing CWDP-305 exam guide for passing the CWDP-305 Exam. You can get the desired outcome by preparing yourself from the CWDP-305 exam dumps material provided by FreePdfDump. We frequently update our CWDP-305 exam preparation material to reflect the latest changes in the CWDP-305 exam syllabus.

Our website FreePdfDump provide the CWDP-305 test guide to clients and help they pass the test CWDP-305 certification which is highly authorized and valuable. Our company is a famous company which bears the world-wide influences and our CWDP-305 test prep is recognized as the most representative and advanced study materials among the same kinds of products. Whether the qualities and functions or the service of our CWDP-305 Exam Questions, are leading and we boost the most professional expert team domestically.

Fantastic CWNP CWDP-305: Certified Wireless Design Professional Valid Braindumps Free - Useful FreePdfDump Reliable CWDP-305 Study Notes

With the help of performance reports of Certified Wireless Design Professional (CWDP-305) Desktop practice exam software, you can gauge and improve your growth. You can also alter the duration and Certified Wireless Design Professional (CWDP-305) questions numbers in your practice tests. Questions of this Certified Wireless Design Professional (CWDP-305) mock test closely resemble the format of the actual test. As a result, it gives you a feeling of taking the actual test.

CWNP Certified Wireless Design Professional Sample Questions (Q226-Q231):

NEW QUESTION # 226

Even when a full pre-design site survey is not performed, what is always recommended to be performed within the deployment areas?

- **A. A spectrum analysis walkthrough**
- B. A scan in the Sub-1 GHz bands to determine if sideband interference will impact 2.4 GHz operations
- C. An AP-on-a-stick survey of 37% of the facility as this amount provides all of the statistical information required for good design
- D. A scan in the 5 GHz band looking for common IoT interferers

Answer: A

NEW QUESTION # 227

While using a USB adapter attached to a USB hub and your laptop for protocol analysis you notice that the SNR is lower than expected. The USB adapter is an 802.11ac 3x3 adapter and is connected to a USB 3 hub. What is likely causing the SNR variation?

- A. USB 2.0 interference
- B. RF incidental energy generated by the cooling fans in the laptop
- C. EMI from the battery in the device
- **D. USB 3.0 interference**

Answer: D

NEW QUESTION # 228

When performing a frame capture over the air during a voice call, you notice that frames in the downlink direction (from the AP to the client) are not being transmitted with the correct UP (User Priority) value for voice frames, but in the uplink direction (from the client to the AP), they are transmitted correctly. What is the likely cause of this issue?

- **A. Somewhere on the wired network QoS markings aren't being trusted**
- B. Bad client driver
- C. Faulty antenna on the AP
- D. AP is not receiving enough PoE, thus not using QoS features

Answer: A

Explanation:

If QoS markings are correct from the client to the AP but incorrect from the AP to the client, it's likely that the QoS markings are being stripped or not trusted somewhere on the wired network between the controller and the AP. This misconfiguration can result in the AP transmitting frames without the appropriate QoS markings, affecting voice quality.

NEW QUESTION # 229

What are some significant drawbacks that are present with WPA/WPA2-Enterprise that are not present with WPA/WPA2-Personal? (Choose all that apply.)

- A. WPA/WPA2-Enterprise does not support the use of usernames/passwords for client authentication.
- **B. WPA/WPA2-Enterprise often requires additional backend infrastructure components that are not required with WPA/WPA2-Personal.**

- C. WPA/WPA2-Enterprise always requires X.509 certificates for server authentication.
- D. WPA/WPA2-Enterprise does not provide a way to perform per-user authorization and access control.
- E. WPA/WPA2-Enterprise often requires more administrative overhead for configuration than WPA/WPA2-Personal.

Answer: B,E

Explanation:

WPA/WPA2-Enterprise provides enhanced security features suitable for enterprise environments, such as per-user authentication and dynamic encryption keys. However, these benefits come with certain drawbacks not present in WPA/WPA2-Personal: Additional Infrastructure Requirements: WPA/WPA2-Enterprise typically requires a RADIUS server to handle authentication, which adds complexity and cost to the network infrastructure.

Increased Administrative Overhead: Configuring and maintaining WPA/WPA2-Enterprise involves managing user credentials, certificates, and RADIUS server settings, which demands more administrative effort compared to the simpler pre-shared key setup of WPA/WPA2-Personal.

It's important to note that WPA/WPA2-Enterprise does support the use of usernames and passwords for client authentication and provides mechanisms for per-user authorization and access control. While X.509 certificates are commonly used for server authentication in WPA/WPA2-Enterprise, they are not strictly required in all configurations.

NEW QUESTION # 230

In a manufacturing facility with highly reflective materials, you are planning an upgrade to your existing 802.11b WLAN implementation. You have chosen a dual-band 802.11n infrastructure product for this purpose. Your client applications include:

Handheld scanners for inventory management

Toughbooks (laptops) mounted on forklifts for inventory and workflow management VoWiFi phones used by select employees throughout the facility You are evaluating all of the 802.11n enhancements and determining which features to enable for your environment and applications.

In this scenario, what 802.11n enhancement typically should NOT be enabled on the 2.4 GHz radio of the new APs?

- A. Short guard intervals
- B. Frame aggregation
- C. Block Acknowledgments
- D. Multiple streams

Answer: A

Explanation:

Comprehensive and Detailed Explanation:

In environments with highly reflective materials, such as manufacturing facilities, the use of Short Guard Intervals (SGI) can lead to increased inter-symbol interference due to multipath propagation. SGI reduces the guard interval from 800ns to 400ns, which can improve throughput in environments with minimal interference. However, in reflective environments, the shorter interval may not provide sufficient time to mitigate the effects of delayed signals, leading to higher error rates. Therefore, it is recommended to disable SGI on the 2.4 GHz band in such environments to maintain reliable communication.
