Authoritative Portworx-Enterprise-Professional PDF Question - Easy and Guaranteed Portworx-Enterprise-Professional Exam Success

Dumpleader provides actual to help candidates pass on the first try, ultimately saving them time and resources. These questions are

of the highest quality, ensuring success for those who use them. To achieve success, it's crucial to have access to quality Pure Storage Portworx-Enterprise-Professional Exam Dumps and to prepare for the likely questions that will appear on the exam. Dumpleader helps candidates overcome any difficulties they may face in exam preparation, with a 24/7 support team ready to assist with any issues that may arise.

Pure Storage Portworx-Enterprise-Professional Exam Syllabus Topics:

Topic	Details
Topic 1	• Deploy and Install: This domain targets DevOps Engineers and Infrastructure Specialists and focuses on deploying and installing Portworx storage solutions. It includes configuring and setting up storage clusters to support containerized applications reliably and securely.
Topic 2	• Operations and Administration: This section of the exam measures the skills of Storage Administrators and Kubernetes Operators and covers managing cluster operations and administering container storage environments using Portworx. Candidates demonstrate the ability to efficiently manage and operate storage clusters in production environments.
Topic 3	• Security: This section focuses on Security Engineers and Compliance Officers responsible for enforcing security measures in container storage environments. Topics include managing encryption, access control, and compliance policies to protect stored data.
Topic 4	• Business Continuity: This domain measures the skills of Disaster Recovery Planners and IT Continuity Managers in implementing backup, recovery, and failover strategies. It ensures candidates understand how to sustain business operations and data availability using Portworx features.
Topic 5	• Observability and Troubleshooting: This section assesses the expertise of Support Engineers and System Administrators in monitoring storage deployments and troubleshooting issues. Candidates learn to use observability tools and techniques to maintain system health and resolve performance problems effectively.

Pure Storage Pure Certified Portworx Enterprise Professional (PEP) Exam Sample Questions (Q32-Q37):

NEW QUESTION # 32
What is the minimum Stork version required to perform an Application Backup?

- A. Stork 23.3.0
- B. Any Stork version works
- C. Stork 2.3

Answer: C

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Stork version 2.3 is the minimum version required to support Application Backup features in Portworx. Application Backup allows for consistent snapshots and restores of complex, multi-volume, and multi-pod stateful applications. This capability depends on enhancements introduced in Stork 2.3 that enable application-aware backup orchestration, coordination between Kubernetes and storage layers, and integration with backup policies. Earlier Stork versions lack these features, making them unsuitable for application-level backups. Portworx release notes and Stork documentation confirm that version 2.3 introduced key functionalities that underpin the reliable backup and restore workflows for stateful workloads, making it a baseline requirement for disaster recovery and business continuity implementations involving application backups【Pure Storage Portworx Backup Docs source】.

NEW QUESTION # 33
What command allows a Portworx admin to create a cloud credential for the Object Store?

- A. pxctl credentials create
- B. pxctl service credentials create

- C. pxctl credentials generate

Answer: A

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
In Portworx, managing credentials for cloud object stores is vital to enable features like cloud snapshots and backups. The command pxctl credentials create is used to create and register cloud credentials with the Portworx cluster. This command allows administrators to specify provider details such as AWS, Google Cloud, or Azure, and input necessary access keys, secret keys, regions, and endpoints. Proper credential configuration enables Portworx to authenticate with external object stores securely, ensuring reliable data movement and disaster recovery operations. The CLI facilitates easy credential management, including listing, updating, and deleting credentials as needed. Official Portworx documentation highlights pxctl credentials create as the authoritative command for establishing cloud storage access, ensuring security best practices by managing credentials centrally within the Portworx control plane【Pure Storage Portworx CLI Guide source】.

NEW QUESTION # 34
What does the DriveStateChange alert indicate?

- A. Free disk space going below the recommended level of 10%
- B. Free volume space going below the recommended level of 5%
- C. Free disk space going below the recommended level of 20%

Answer: A

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
The DriveStateChange alert in Portworx indicates that free disk space on a storage device has fallen below the recommended threshold of 10%. This alert warns administrators that storage capacity on a particular disk is critically low and that immediate action may be needed to avoid performance degradation or failures. Monitoring disk space is essential to maintain cluster health and prevent data loss. Portworx automatically generates this alert as part of its proactive monitoring system, providing early warning so operators can add capacity, remove unnecessary data, or re-balance workloads. The alert documentation advises maintaining sufficient free space to ensure optimal performance and data durability in the Portworx cluster【Pure Storage Portworx Alerting Guide source】.

NEW QUESTION # 35
Which 3 secret stores are supported by Portworx?

- A. IBM KMS, Hashicorp Vault, Gemalto SafeNet KeySecure
- B. AWS KMS, Google Cloud KMS, Kubernetes Secrets
- C. AWS KMS, Oracle Key Vault, Hashicorp Vault

Answer: B

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Portworx integrates with three primary external secret stores to manage encryption keys securely: AWS Key Management Service (AWS KMS), Google Cloud Key Management Service (Google Cloud KMS), and Kubernetes Secrets. AWS KMS enables secure key storage and management for workloads running in AWS, leveraging native cloud security features. Google Cloud KMS provides similar key management for Google Cloud environments, allowing seamless integration with Google's security infrastructure. Kubernetes Secrets provide an on-premises or hybrid cloud method to store encryption keys and sensitive configuration securely within Kubernetes clusters, suitable for private data centers or cloud-agnostic deployments. This multi-cloud and hybrid cloud compatibility enable Portworx to meet diverse customer requirements for key management and regulatory compliance. Portworx security documentation details the setup, configuration, and best practices for each supported secret store to ensure data encryption keys are managed securely and efficiently across environments【Pure Storage Portworx Security Guide source】.

NEW QUESTION # 36
A Portworx administrator wants to enable security without guest access on a new storage cluster using the Portworx Kubernetes operator.

What configuration items should be added to the StorageCluster configuration ?

- A. spec:
  security: 'Enabled'
- B. spec:
  security:
  enabled: true
  auth:
  guestAccess: false
- C. spec:
  security:
  enabled: true
  auth:
  guestAccess: 'Disabled'

Answer: B

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Enabling security in Portworx without allowing guest access involves explicitly setting both enabled: true under the security section and guestAccess: false within the auth subsection of the StorageCluster spec. This configuration activates Portworx security features, enforcing authentication and encryption while preventing unauthenticated (guest) access to volumes. The guestAccess flag controls whether clients without valid credentials can access storage resources; setting it to false tightens security by requiring all access to be authenticated. This declarative setup is managed via the Kubernetes operator, ensuring consistent enforcement across cluster restarts and upgrades. Portworx's security documentation stresses this dual setting to harden clusters against unauthorized access while maintaining operational capabilities for authorized users, aligning with enterprise security policies and compliance standards【Pure Storage Portworx Security Guide source】.
