

Esri EAEP2201 Questions To Complete Your Preparation

P.S. Free 2026 Esri EAEP2201 dumps are available on Google Drive shared by TestPassKing: <https://drive.google.com/open?id=16J9HVMfZ3edUbaaCLPaPKrLAis-IYRo7>

Enterprise Administration Professional 2201 EAEP2201 practice test software always keeps track of previous EAEP2201 practice exam attempts and shows the changes and improvements in every attempt. All the Enterprise Administration Professional 2201 questions given in Enterprise Administration Professional 2201 pdf questions file and practice test software are very similar to the actual Enterprise Administration Professional 2201 EAEP2201 Exam Questions. So it eliminates the hassle of EAEP2201 exam fear. The desktop EAEP2201 practice exam software is compatible with windows based computers. There are many customers support team of TestPassKing always to fix any problems.

In order to prevent your life from regret and remorse, you should seize every opportunity which can change lives passibly. Did you do it? TestPassKing's Esri EAEP2201 exam training materials can help you to achieve your success. We can help you pass the Esri EAEP2201 Exam smoothly. In order not to let success pass you by, do it quickly.

Evaluate Your Exam Preparation with Online Esri EAEP2201 Practice Test Engine

Quality should be tested by time and quantity, which is also the guarantee that we give you to provide EAEP2201 exam software for you. Continuous update of the exam questions, and professional analysis from our professional team have become the key for most candidates to Pass EAEP2201 Exam. The promise of "no help, full refund" is the motivation of our team. We will continue improving EAEP2201 exam study materials. We will guarantee that you you can share the latest EAEP2201 exam study materials free during one year after your payment.

Esri Enterprise Administration Professional 2201 Sample Questions (Q54-Q59):

NEW QUESTION # 54

An ArcGIS Enterprise deployment is completely internal and does not have access to the internet. How should the organization find patches and updates for the deployment components?

- A. Open the Check For Updates option on the machine where ArcGIS Server is installed
- B. Refer to the Patches and Service Pack page on the Esri Support website
- C. Run the patch notification bat utility from the command line

Answer: C

Explanation:

For environments without internet access, the organization can use thepatchnotification.batutility to check for available patches and updates. This utility can be run from the command line and provides information about the current patch status of the ArcGIS Enterprise components. Administrators can then manually download the necessary patches from another machine with internet access and transfer them to the internal environment for installation.

NEW QUESTION # 55

In an existing ArcGIS Enterprise deployment, the ArcGIS Data Interoperability extension must be licensed on one of the federated ArcGIS Server sites. The administrator has received the license file for the extension.

What should the administrator do?

- A. Use the Software Authorization Wizard to apply the license and then restart
- B. Manually add the license to the JSON license file, and then reload it
- C. Use the ArcGIS Server installation program to apply the license

Answer: A

Explanation:

To license the ArcGIS Data Interoperability extension on a federated ArcGIS Server site, the administrator must use theSoftware Authorization Wizard. This is the officially supported and recommended method provided by Esri for authorizing additional extensions to ArcGIS Server.

According to the ArcGIS Enterprise Installation Guide and Esri's administration best practices:

* The Software Authorization Wizard is the tool used to input license information and authorize software features such as the Data Interoperability extension.

* This wizard can be launched after installation or from the ArcGIS Server program group at any time.

* Once the license is applied using the wizard, it is necessary to restart the ArcGIS Server serviceso that the newly authorized extension is loaded properly.

Option A is incorrect because Esri does not support manually modifying license JSON files. Doing so can corrupt the licensing configuration and is not documented or recommended.

Option C is incorrect because the ArcGIS Server installation program does not apply or manage licenses-it is used solely for installing the core server software.

Therefore, the correct method is to use the Software Authorization Wizard, apply the license file, and restart the ArcGIS Server service to activate the extension.

NEW QUESTION # 56

A GIS administrator is analyzing the usage statistics of ArcGIS Enterprise. The administrator needs to pull tabular statistics on various groups and users about the type of content that they produce and consume.

Which action should the administrator perform?

- A. Run usage reports in Portal for ArcGIS to determine the effect on the organization.
- B. Open ArcGIS Server statistics to create a report for commonly used items.
- C. Use ArcGIS Monitor to capture desired information over a period of time in a report.

Answer: A

Explanation:

Portal for ArcGIS provides built-in usage reports that allow administrators to monitor how members are using, sharing, and contributing resources. These reports offer insights into content creation, usage patterns, and group activities. Administrators can generate and export these reports in tabular formats for further analysis.

ArcGIS Server statistics focus on service-level metrics and do not provide detailed user or group content statistics. ArcGIS Monitor

captures system performance metrics but is not designed for detailed content usage analysis by users or groups.

NEW QUESTION # 57

A GIS administrator must share an imagery service with another ArcGIS Enterprise. The administrator sets up a distributed collaboration with the other ArcGIS Enterprise and shares the service as a reference. The users in the other organization keep being prompted for credentials.

Which action should the administrator perform?

- A. Set the collaboration workspace to send and receive
- **B. Share the image service as a copy**
- C. Configure the service with anonymous access
- D. Save viewer credentials in the collaboration

Answer: B

NEW QUESTION # 58

Multiple users report that a map service is experiencing negative performance. Upon review of ArcGIS Monitor data, the GIS analyst finds the following:

- * The minimum number of instances is 2 and the maximum is 8 for that service.
- * The data is in a publication Enterprise Geodatabase with no system usage in excess of 50%.
- * At the p75 level of requests, the map service time is 10 times longer than the service time at the p25 level.
- * The number of instances in use at the p50 level is 8.
- * The maximum % of physical memory in use is 40%, and the maximum % of virtual memory in use is 44% on the ArcGIS Server.
- * The maximum % CPU utilization observed is 53%.

What is causing the issue?

- A. The network connection between the database server and ArcGIS Server is saturated.
- **B. The maximum instance setting is too low for the demand on the underperforming map service.**
- C. The client is an Android device, and the ArcGIS Server is a Linux virtual machine.

Answer: B

Explanation:

The ArcGIS Monitor data indicates that the map service is reaching its maximum configured instances (8) at the median usage level (p50), suggesting that the service cannot scale to meet higher demand. The significant increase in service time at the p75 level further supports that the service is under-provisioned. Since system resources like CPU and memory are not fully utilized, the bottleneck is likely due to the instance configuration. Increasing the maximum number of instances would allow the service to handle more concurrent requests, improving performance.

There is no evidence of network saturation or client-specific issues affecting performance in this scenario.
