

Learning Oracle 1z0-076 Mode | 1z0-076 Dumps Vce

BTW, DOWNLOAD part of PrepAwayETE 1z0-076 dumps from Cloud Storage: https://drive.google.com/open?id=1CxActYNDad-OhguFhrbb_T3_bblM8FDdb

As long as you insist on using our 1z0-076 learning prep, you can get the most gold certificate in the shortest possible time! Want to see how great your life will change after that! You can make more good friends and you can really live your fantasy life. Don't hesitate, the future is really beautiful! If you are still not sure if our product is useful, you can free download the free demos of our 1z0-076 practice quiz. It is easy and fast.

Oracle 1z0-076 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Patching and Upgrading Databases in a Data Guard Configuration: This section provides guidance on patching and upgrading databases in a Data Guard environment, along with performance optimization techniques and monitoring considerations.
Topic 2	<ul style="list-style-type: none"> • Managing Physical Standby Files After Structural Changes on the Primary Database: The topic covers managing structural changes in the primary database and their impact on physical standby files.
Topic 3	<ul style="list-style-type: none"> • Using Oracle Active Data Guard: Supported Workloads in Read-Only Standby Databases: Here, the usage of physical standby databases for real-time queries is discussed.
Topic 4	<ul style="list-style-type: none"> • Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.
Topic 5	<ul style="list-style-type: none"> • Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.
Topic 6	<ul style="list-style-type: none"> • Using Flashback Database in a Data Guard Configuration: This topic covers the configuration and advantages of using Flashback Database in a Data Guard setup, as well as the process of enabling fast-start failover for seamless role changes.
Topic 7	<ul style="list-style-type: none"> • Performing Role Transitions: Here, the concept of database roles is explained, along with the steps for performing switchovers, failovers, and maintaining physical standby sessions during role transitions.

Topic 8	<ul style="list-style-type: none"> • Oracle Data Guard Broker Basics: An overview of the Data Guard broker, its architecture, components, benefits, and configurations, is provided here. It serves as an introduction to the tool used for managing Data Guard configurations.
Topic 10	<ul style="list-style-type: none"> • Creating a Logical Standby Database: This topic guides users through the process of creating and managing a logical standby database, including SQL Apply filtering.
Topic 11	<ul style="list-style-type: none"> • Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.
Topic 12	<ul style="list-style-type: none"> • Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.

1z0-076 real exam - 1z0-076 real braindumps - 1z0-076 practice test

Why do most people choose PrepAwayETE? Because PrepAwayETE could bring great convenience and applicable. It is well known that PrepAwayETE provide excellent Oracle 1z0-076 exam certification materials. Many candidates do not have the confidence to win Oracle 1z0-076 Certification Exam, so you have to have PrepAwayETE Oracle 1z0-076 exam training materials. With it, you will be brimming with confidence, fully to do the exam preparation.

Oracle Database 19c: Data Guard Administration Sample Questions (Q83-Q88):

NEW QUESTION # 83

Which TWO statements are true about database parameters for databases in a Data Guard environment?

- A. DB_FILE_NAME_CONVERT is only required if the standby database is on the same host as the primary database.
- B. LOG_FILE_NAME_CONVERT applies to online redo logs and archived logs.
- C. COMPATIBLE must have identical values for primary and standby databases.
- D. If DB_RECOVERY_FILE_DEST is specified, then LOG_ARCHIVE_DEST_n is not required for local archive logs.
- E. The databases that are part of a Data Guard configuration must have different DB_UNIQUE_NAME initialization parameters.

Answer: C,E

NEW QUESTION # 84

Which THREE are among the various tasks performed by the Data Guard Monitor (DMON) process?

- A. communicating with the DMON process of the observer to monitor a primary database in case a fast start failover is required
- B. maintaining information about all members of the broker configuration in binary configuration files.
- C. activating role-based services appropriately in the various database instances of the configuration, based on the database role
- D. communicating with dkon processes in other database instances that are part of the broker configuration
- E. performing role transitions when switchover requests are made

Answer: B,C,E

Explanation:

The Data Guard Monitor (DMON) process is a key component of Oracle Data Guard. It plays a crucial role in managing and monitoring the state of both the primary and standby databases in a Data Guard configuration.

* Performing role transitions when switchover requests are made (A): DMON is responsible for coordinating the switchover process

between the primary and standby databases. This involves safely transitioning the roles of the databases to ensure data protection and availability.

* Maintaining information about all members of the broker configuration in binary configuration files (B): DMON maintains detailed information about the databases in the Data Guard configuration, including their roles, states, and network addresses. This information is stored in binary configuration files, which are used by the Data Guard Broker to manage the Data Guard environment.

* Activating role-based services appropriately in the various database instances of the configuration, based on the database role (C): DMON activates services that are appropriate for the role of each database in the Data Guard configuration. For example, it may activate different services on a primary database than on a standby database, based on the specific requirements of each role.

NEW QUESTION # 85

Examine this list of possible steps:

1. Raise the compatibility level on both databases.
2. Restart SQL Apply on the upgraded logical standby database.
3. Start SQL Apply on the old primary database.
4. Perform a Switchover to the logical standby database.
5. Upgrade the logical standby database.
6. Upgrade the old primary database.

Which is the minimum number of steps in the correct order, to perform a rolling release upgrade of a data guard environment using an existing logical standby database and to enable the new functionality?

- A. 5,2,4,6,3,1
- B. 5,2,4,1
- C. 4,6,5,2,3,1
- D. 1,5,2,4,6,3
- E. 5,2,4,3,6,1

Answer: D

Explanation:

The process of performing a rolling release upgrade in a Data Guard environment using a logical standby database generally involves these steps:

Raise the compatibility level on both databases (1): Ensuring both the primary and logical standby databases are operating with the same and correct compatibility level is essential before starting the upgrade process.

Upgrade the logical standby database (5): Apply the database upgrade to the logical standby first, which allows the primary database to continue serving the workload without interruption.

Restart SQL Apply on the upgraded logical standby database (2): Once the logical standby has been upgraded, SQL Apply must be restarted to apply the redo data from the primary database, which is still running the earlier version.

Perform a switchover to the logical standby database (4): After confirming that the logical standby database is successfully applying redo data, perform a switchover to make it the new primary database.

Upgrade the old primary database (6): With the new primary database now in place, upgrade the old primary database (which is now the new standby) to the new Oracle Database release.

Start SQL Apply on the old primary database (3): Finally, start SQL Apply on what is now the standby database to synchronize it with the new primary database.

NEW QUESTION # 86

Which TWO observations are true about the Far Sync instance?

- A. Can only be created using a series of SQL commands
- B. Includes a standby control file, password file, data files, standby redo logs, and archive logs
- C. Applies redo received
- D. Receives redo synchronously from the primary database
- E. Can be created using the RMAN DUPLICATE command

Answer: C,D

Explanation:

A Far Sync instance is a special kind of Oracle Data Guard configuration that allows synchronous redo transport from a primary database to a remote standby database with minimum impact on the primary database's performance. The Far Sync instance receives redo data synchronously from the primary database (A), then ships it asynchronously to the remote standby database, thus extending zero data loss protection over longer distances and higher network latency environments than would be practical with a synchronous standby alone. The Far Sync instance does not apply the redo data; it just receives and ships it (E). A Far Sync instance does not have data files, and it cannot apply redo to stay synchronized with the primary database.

Reference:

Oracle Database High Availability Overview and Oracle Data Guard Concepts and Administration documentation detail the role and configuration of Far Sync instances, including how they contribute to achieving zero data loss disaster recovery over long distances.

NEW QUESTION # 87

Which two are prerequisites for configuring flashback database for Oracle 19c databases, in a Data Guard environment?

- A. The Data Guard real-time apply feature must be enabled.
- **B. The database must be in ARCHIVELOG mode.**
- C. A far sync instance must be configured to flash back a standby when the primary has been flashed back.
- D. The data guard broker must be used.
- **E. A fast recovery area must be configured.**

Answer: B,E

Explanation:

A fast recovery area must be configured (B): Flashback Database requires a fast recovery area to be set up because flashback logs are stored there. The fast recovery area is a unified storage location for all recovery-related files and activities.

The database must be in ARCHIVELOG mode (C): Flashback Database operation relies on the ability to archive redo logs.

Therefore, the database must be running in ARCHIVELOG mode for Flashback Database to be enabled.
