100% Pass Quiz Nutanix - Valid Real NCP-EUC Dumps

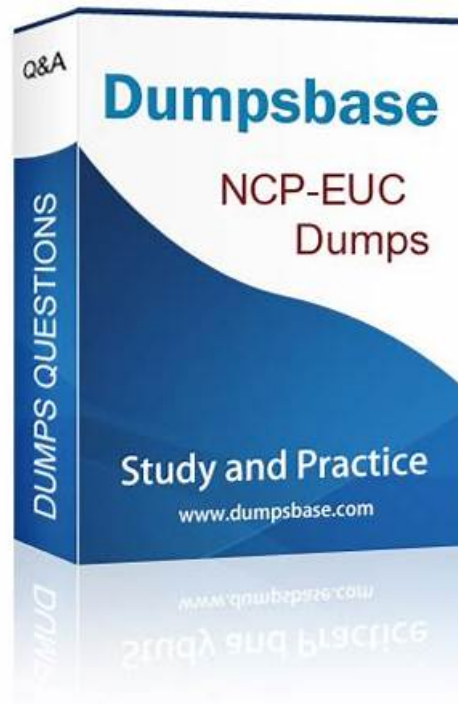

P.S. Free & New NCP-EUC dumps are available on Google Drive shared by TorrentValid: https://drive.google.com/open?id=1SzVt0PFJpuLFC2N92XbuxJc92LbxxU61

You surely desire the NCP-EUC certification. So with a tool as good as our NCP-EUC exam material, why not study and practice for just 20 to 30 hours and then pass the examination? With our great efforts, our NCP-EUC study materials have been narrowed down and targeted to the examination. So you don't need to worry about wasting your time on useless NCP-EUC Exam Materials information. We can ensure you a pass rate as high as 98% to 100%.

Nutanix Certified Professional - End-User Computing (NCP-EUC) certification exam is a valuable credential for IT professionals who specialize in end-user computing and VDI solutions. Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam certification exam validates the candidate's proficiency in deploying, managing, and troubleshooting Nutanix VDI solutions. It is a vendor-neutral certification that proves the candidate's expertise in VDI concepts and can be applied to different VDI solutions. The NCP-EUC Certification Exam is a must-have for IT professionals aspiring to work in the VDI field and can give them a competitive edge in the job market.

Exam Nutanix NCP-EUC Score | Reliable NCP-EUC Exam Guide

Probably you've never imagined that preparing for your upcoming NCP-EUC exam could be so easy. The good news is that NCP-EUC test dumps have made it so! The brilliant NCP-EUC test dumps are the product created by those professionals who have extensive experience of designing exam study materials. These professionals have deep exposure of the test candidates' problems and requirements hence our NCP-EUC Test Dumps cater to your need beyond your expectations.

Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam Sample Questions (Q112-Q117):

NEW QUESTION # 112
What Flow Network Security function is a schema of rules for specifying/enforcing a desired behavior and has one or more policies?

- A. Category set2
- B. Category1
- C. Security policy
- D. Security policy model3

Answer: D

Explanation:
In the terminology of Flow Network Security Next-Gen (FNS NG), the components are defined as follows:
* Security Policy Model: Defined as "A schema of policies for specifying and enforcing a desired behavior.4 A Policy Model will have one or more policies."5 This model provides the framework (such as Application, Isolation, or Quarantine) within which specific policies are created.
* Security Policy: Defined as a "collection of security rules and assets [entities, endpoints, categories, applications, etc.] on which the rules have to be enforced together."6 Therefore, the function that acts as the overarching schema and contains "one or more policies" is the Security Policy Model.7

NEW QUESTION # 113
A VM is having vGPU-related issues. An administrator wants to determine the display protocol in use and display real-time statistics such as CPU time, memory usage, frames per second, bandwidth, network latency, and GPU utilization.
What troubleshooting tool should the administrator use?

- A. Process Explorer
- B. RDAnalyzer
- C. Prism Central
- D. NVIDIA GPUView

Answer: B

Explanation:
Comprehensive and Detailed Explanation From Exact Extract of Nutanix End User Computing documents:
According to Nutanix EUC Troubleshooting Guides:
* Tool Capabilities: RDAnalyzer (Remote Display Analyzer) is the specific tool recommended to view real-time statistics regarding the Display Protocol (Blast/ICA/PCoIP), Frames Per Second (FPS), Bandwidth, Network Latency, and GPU Utilization in a single overlay window.
* Why not GPUView? NVIDIA GPUView (Option D) is a deep-dive performance trace tool used for analyzing complex rendering pipelines and driver lag (DPCs/ISRs). It does not provide a live dashboard of "Network Latency" or "Bandwidth" for the display protocol, nor is it used for quick "real-time" monitoring by administrators in the same way RDAnalyzer is.
* Note on Exam Key: While some older exam dumps might incorrectly flag D, RDAnalyzer is the only tool in the list that provides the protocol-specific network metrics (bandwidth/latency) requested in the scenario.

NEW QUESTION # 114
An administrator wants to allow SSH access to a Prism Element cluster from selected workstations and disallow password access.
How can this be accomplished?

- A. Enable Cluster Lockdown and configure pre-shared RSA keys.
- B. Configure the cluster SSH Whitelist in ncli.
- C. Set cluster IP Restriction State to restricted.
- D. Enable Security Configuration Management Automation (SCMA).

Answer: A

Explanation:
According to the Nutanix Security Guide, Cluster Lockdown is the specific security feature designed to restrict access to the cluster by disabling password-based authentication. When Cluster Lockdown is enabled, the cluster allows access only via SSH keys (RSA keys).
To meet the requirement of allowing access from "selected workstations" while "disallowing password access," the administrator must use Cluster Lockdown. By generating an SSH key pair and configuring the public key within the Cluster Lockdown settings (and removing the "Enable Remote Login with Password" option), the administrator ensures that only workstations possessing the corresponding private key can authenticate. This effectively restricts access to the specific workstations holding the keys and

eliminates the risk associated with password-based logins. While IP restrictions (Option B/C) can limit the source addresses, they do not inherently disable password authentication, which is the primary requirement of the question.

NEW QUESTION # 115

An EUC environment is being deployed with multi-session server OS workloads. An administrator has a requirement for configuring RDS licensing for redundancy across Nutanix clusters.

Which action should the administrator take when configuring the group policy settings needed for this requirement?

- A. Set the remote desktop licensing mode.
- B. Prevent remote desktop license server upgrade.
- C. Use the specified remote desktop license servers.
- D. Specify the remote desktop license server security group.

Answer: C

Explanation:
Comprehensive and Detailed Explanation From Exact Extract of Nutanix End User Computing documents:
According to Microsoft RDS and Nutanix Best Practices:
* GPO Configuration: The specific Group Policy Object (GPO) setting used to define which license servers an RD Session Host should contact is titled "Use the specified remote desktop license servers
".
* Redundancy: In this policy setting, the administrator can input a list of multiple license servers (IP addresses or FQDNs). If the first server in the list is unreachable (due to a cluster failure or maintenance), the host automatically attempts to contact the subsequent servers, thereby achieving the required redundancy.

NEW QUESTION # 116

Which metric is available in customized reports when using the AHV Plug-in for Citrix Director?

- A. VM CPU Ready time
- B. VM Bandwidth latency
- C. VM Network utilization
- D. VM Average I/O latency

Answer: C

Explanation:
Nutanix AHV Plug-In for Citrix Director provides more information on Citrix generated desktops running on Nutanix AHV. Some of the metrics that are available in customized reports are:
VM CPU Usage
VM Memory Usage
VM Disk IOPS
VM Disk Bandwidth
