Effective Talend Talend-Core-Developer: Test Talend Core Certified Developer Exam Practice - Hot PDFVCE Talend-Core-Developer Reliable Braindumps Book

Our Talend-Core-Developer training guide always promise the best to service the clients. We are committing in this field for many

years and have a good command of the requirements of various candidates. Carefully testing and producing to match the certified quality standards of Talend-Core-Developer Exam Materials, we have made specific statistic researches on the Talend-Core-Developer practice materials. And our pass rate of the Talend-Core-Developer study engine is high as 98% to 100%.

Talend Core Certified Developer Exam Sample Questions (Q41-Q46):

NEW QUESTION # 41

You are using a tRESTClient component to call a REST service. Which advanced option should you use to convert the response from the server to the document type?

- A. Convert Response To JSON Document
- B. Convert Response To XML Document
- **C. Convert Response To DOM Document**
- D. Convert Response To HTML Document

Answer: C

Explanation:

Comprehensive and Detailed Explanation:

In Talend Studio, the tRESTClient component includes an advanced setting called "Convert Response To DOM Document". When this option is selected, the response from the REST service is converted into a DOM (Document Object Model) document. This allows for structured processing of the response data within Talend workflows.

NEW QUESTION # 42

You created a Job to process a customer database. Next, you want to debug the Job using Traces Debug and pause the execution when it encounters any records for customers residing in the state of California.

- **A. Right-click the trace on the output of the input component and select Show Breakpoint Setup.**
- B. Right-click the trace on the output of the input component and select Add Breakpoint.
- C. Open the Debug Run tab of the Run view and click Traces Debug.
- D. Add a breakpoint in the Advanced Settings tab of the Run view.

Answer: A

Explanation:

To debug a job using Trace Debug mode and pause the execution when it encounters any records for customers residing in the state of California, you need to right-click on the trace on the output of the input component and select Show Breakpoint Setup option. Trace Debug mode is a feature that allows you to trace each row processed by your job components and see the values of each column in each row. You can access this mode by opening the Debug Run tab of the Run view and clicking on Trace Debug button. A trace is a link that shows the data flow between components in your job design workspace.

The Show Breakpoint Setup option allows you to set a breakpoint on a trace based on a condition or an expression. A breakpoint is a point where the execution of your job pauses and waits for your action. You can use breakpoints to inspect your data or debug your logic at specific points of your job execution. You can access this option by right-clicking on a trace on your job design workspace and selecting Show Breakpoint Setup. This will open a dialog box where you can enter a condition or an expression for your breakpoint.

For example, if you want to pause your job execution when it encounters any records for customers residing in the state of California, you can enter this condition for your breakpoint:
row1.state == "CA"

This will make your job stop at the trace where this condition is met and show you the values of each column for that row.

You do not need to add a breakpoint in Advanced settings tab of Run view, open Debug Run tab of Run view and click Trace Debug button, or right-click on trace on output of input component and select Add Breakpoint option. These options are not used to set breakpoints based on conditions or expressions. The Advanced settings tab of Run view is used to configure advanced settings for your job execution, such as JVM arguments, statistics parameters, implicit context load parameters, etc. The Debug Run tab of Run view is used to access Trace Debug mode, but not to set breakpoints. The Add Breakpoint option is used to add a simple breakpoint on a trace without any condition or expression. References: Talend Open Studio: Open- source ETL and Free Data Integration | Talend, [Trace Debug mode - 7.3], [Breakpoints - 7.3]

NEW QUESTION # 43

How do you create an empty Joblet?

- A. Right-clicking a space in the Designer and select refactor to Joblet.
- B. Create an empty Job, then export it as a Joblet by right-clicking it in the Repository.
- **C. Right-click Joblet Designs the Repository and select Create Joblet.**
- D. Create an empty Job and use the file menu to save it as Joblet.

Answer: C

Explanation:

To create an empty Joblet, you need to right-click on the Joblet Designs node in the Repository tree view and select Create Joblet option. This will open a dialog box where you can enter the name and description of your Joblet and select an icon for it. You can then design your Joblet by adding components and links to it in the Designer workspace.

You cannot create an empty Joblet by creating an empty job, then exporting it as a Joblet by right-clicking it in the Repository, creating an empty job and using the file menu to save it as Joblet, or right-clicking a space in the Designer and selecting refactor to Joblet. These methods are not available in Talend Studio and may cause errors or unexpected results. References: Talend Open Studio: Open-source ETL and Free Data Integration | Talend, [Joblets - 7.3]

NEW QUESTION # 44

How can you create REST API metadata in Talend Studio? Choose 2 answers.

- **A. Create it manually in Talend Studio.**
- B. Import it from a JSON file.
- **C. Import it from Talend API Designer.**
- D. Import it from Talend API Tester.

Answer: A,C

Explanation:

Comprehensive and Detailed Explanation:

In Talend Studio, REST API metadata can be created using the following methods:

* Create it manually in Talend Studio (Option A):

* Users can define REST API metadata within Talend Studio by manually specifying API structure, endpoints, HTTP methods, and parameters.

* This method provides full control over the API metadata but requires manual configuration.

* Import it from Talend API Designer (Option B):

* If an API has been designed using Talend API Designer, it can be imported into Talend Studio.

* This enables reusing the API design directly without manual recreation.

Why not other options?

* Option C (Import from JSON file): Talend Studio does not support direct import of REST API metadata from generic JSON files.

* Option D (Import from Talend API Tester): Talend API Tester is used for testing APIs but does not provide an option to import API definitions into Talend Studio.

NEW QUESTION # 45

Which file should you edit to enable SSL for a JobServer?

- A. Jsl_stat64.ini
- B. Conf/server.xml
- **C. Conf/TalendJobServer.properties**
- D. Conf/TalendServer.properties

Answer: C

Explanation:

To enable SSL for a JobServer, you need to edit the conf/TalendJobServer.properties file. A JobServer is a server application that allows you to execute jobs remotely from Talend Studio or Talend Administration Center. The conf/TalendJobServer.properties file contains various configuration parameters for your JobServer, such as port number, log level, security options, etc. To enable SSL for your JobServer, you need to set the sslparameter to true and provide the path and password of your keystore file that contains

your SSL certificate.

You do not need to edit `conf/TalendServer.properties`, `conf/server.xml`, or `jsl_static64.ini` files. These files are not related to JobServer configuration or SSL settings. The `conf/TalendServer.properties` file is used to configure Talend Administration Center settings, such as database connection, LDAP authentication, email notification, etc. The `conf/server.xml` file is used to configure Tomcat server settings, such as connectors, realms, valves, etc. The `jsl_static64.ini` file is used to configure Java Service Launcher settings, such as service name, description, startup type, etc. References: Talend Open Studio: Open-source ETL and Free Data Integration | Talend, [Configuring Talend JobServer - 7.3], [Configuring Talend Administration Center - 7.3], [Configuring Tomcat - 7.3], [Installing Java Service Launcher - 7.3]

NEW QUESTION # 46

.....

Our customer service is available all day, and your problems can be solved efficiently at any time. Last but not least, we can guarantee the security of the purchase process of Talend-Core-Developer test questions and the absolute confidentiality of customer information. You do not have to worry about these issues, because we know that this is a basic condition for us to establish a good business model. At the same time, if you want to continue learning, Talend-Core-Developer Test Torrent will provide you with the benefits of free updates within one year and a discount of more than one year.
