Salesforce Plat-Dev-301 Reliable Exam Materials - Study Materials Plat-Dev-301 Review

This cost-effective exam product is made as per the current content of the Salesforce examination. Therefore, using CertkingdomPDF the actual Salesforce Plat-Dev-301 dumps will guarantee your successful attempt at the Salesforce Plat-Dev-301 Certification Exam. For the convenience of customers, we have designed Salesforce Plat-Dev-301 pdf dumps, desktop Salesforce Plat-Dev-301 practice exam software, and Salesforce Plat-Dev-301 web-based practice test.

Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q150-Q155):

NEW QUESTION # 150

Universal Containers is using a custom Salesforce application to manage customer support cases. The support team needs to collaborate with external partners to resolve certain cases. However, they want to control the visibility and access to the cases shared with the external partners. Which Salesforce feature can help achieve this requirement?

- A. Apex managed sharing
- B. Sharing sets
- C. Role hierarchy
- D. Criteria-based sharing rules

Answer: A

Explanation:

Apex managed sharing is the correct feature to control the visibility and access to cases shared with external partners. It allows developers to programmatically create sharing records that grant access to users based on specific criteria, providing granular control over record sharing.

NEW QUESTION # 151

A developer is tasked with ensuring that email addresses entered into the system for Contacts and for a custom object called survey Response c do not belong to a list of blocked domains.

The list of blocked domains is stored in a custom object for ease of maintenance by users. The survey Response c object is populated via a custom Visualforce page.

What is the optimal way to implement this?

- A. Implement the logic in validation rules on the Contact and the Survey Response_c Objects.
- B. Implement the logic in an Apex trigger on Contact and also implement the logic within the custom Visualforce page controller.
- C. Implement the logic in a helper class that is called by an Apex trigger on Contact and from the custom Visualforce page controller.
- D. Implement the logic in the custom Visualforce page controller and call that method from an Apex trigger on Contact.

Answer: C

Explanation:

The optimal way to enforce the exclusion of blocked domains for email addresses entered into Contacts and a custom object is to use a helper class. The class can be called by an Apex trigger on the Contact object and from the controller of the custom Visualforce page used for the Survey Response. This centralizes the logic for maintainability and reusability.

NEW QUESTION # 152

Which two queries are selective SOQL queries and can be used for a large data set of 200,000 Account records?

Choose 2 answers

- A. SELECT Id FROM Account WHERE Name LIKE '!-NULL
- B. SELECT Id FROM Account WHERE Name IN (List of Names) AND Customer_Number_c = 'ValueA
- C. SELECT Id FROM Account WHERE Name != ''
- D. SELECT Id FROM Account WHERE II IK (List of Account Ida)

Answer: B,C

Explanation:

Selective queries in SOQL are optimized for performance. Query B is selective because it filters out empty names, which are likely to be less in number. Query C is selective if the list of names is small, and 'Customer_Number_c' is indexed or can be used as an external ID field. Working with Very Large SOQL Queries

NEW QUESTION # 153

Universal Containers has an Apex trigger on Account that creates an Account Plan record when an Account is marked as a Customer.

Recently a record-triggered flow was added so that whenever an Account is marked as a Customer, a 'Customer Since' date field is

updated with today's date. Since the addition of the flow, two Account Plan records are created whenever the Account is marked as a Customer.

What might cause this to happen?

- A. The flow is configured to use an "Update Records" element.
- B. The flow is configured to evaluate when a record is created and every time it is edited.
- C. The Apex trigger is not bulk safe and calls insert inside of a for loop.
- D. The Apex trigger does not use a static variable to ensure it only fires once.

Answer: A

Explanation:

If a flow is configured to evaluate when a record is created and every time it's edited, and an Apex trigger also fires upon the same conditions, it could result in duplicate operations. In this case, two Account Plan records are created because both the flow and the trigger execute upon the Account being marked as a Customer.

NEW QUESTION # 154

Which tag should a developer use to display different text while an <apex:commandButton> is Processing an action?

- A. <apex:actionSupports>
- B. <apex:actionStatus>
- C. <apex:pageMessages>
- D. <apex:actionPaller>

Answer: B

Explanation:

The <apex:actionStatus> tag in Visualforce is used to display the status of an AJAX request, such as showing different text while a command button is processing an action.

NEW QUESTION # 155

.....

Our Plat-Dev-301 test guides have a higher standard of practice and are rich in content. If you are anxious about how to get Plat-Dev-301 certification, considering purchasing our Plat-Dev-301 study tool is a wise choice and you will not feel regretted. Our learning materials will successfully promote your acquisition of certification. Our Plat-Dev-301 qualification test closely follow changes in the exam outline and practice. In order to provide effective help to customers, on the one hand, the problems of our Plat-Dev-301 test guides are designed fitting to the latest and basic knowledge. For difficult knowledge, we will use examples and chart to help you learn better. On the other hand, our Plat-Dev-301 test guides also focus on key knowledge and points that are difficult to understand to help customers better absorb knowledge. Only when you personally experience our Plat-Dev-301 qualification test can you better feel the benefits of our products. Join us soon.
