## Scrum SAFe Practitioner Exam (6.0) Sample Questions (Q215-Q220):

NEW QUESTION # 215

What is one key benefit of a backlog refinement session?

- A. It provides time to identify dependencies and issues that could impact the next Iteration
- B. It allows the team to state the problem and think about what, where, when, and the impact
- C. It is the main way in SAFe for achieving relentless improvement
- D. It serves a variety of purposes, including a dedicated time for planning, retrospecting, exploring, and innovating

**Answer: A**

Explanation:

n: A backlog refinement session is a periodic activity teams use to define, discuss, estimate, and establish acceptance criteria for upcoming backlog items<sup>1</sup>. One key benefit of a backlog refinement session is that it provides time to identify dependencies and issues that could impact the next iteration. By doing so, teams can reduce uncertainty, avoid surprises, and plan more effectively. Backlog refinement also helps surface problems with the current plan, which may require discussion at the team, PO, or coach syncs<sup>2</sup>. Additionally, backlog refinement helps teams align their backlog with the ART backlog, the PI objectives, and the customer needs<sup>2</sup>. #### NEW QUESTION # 216

Which of the following is not one of the four activities of continuous deployment?

- A. respond
- B. test
- C. deploy
- D. Verify

**Answer: B**

#### NEW QUESTION # 217

Which statement is true about Features and Stories?

- A. They are estimated like User Stories
- B. Features should be small enough to fit into an Iteration
- C. Features can be larger than an Iteration but Stories should be small enough to fit into an Iteration
- D. They are prioritized by the team

**Answer: C**

Explanation:

In SAFe, a clear distinction is made between the purpose, structure and content of features, and that of stories (including enablers). Features are visible units of business intent that the customer recognizes, and it's at this level of detail that the customer is able to prioritize their needs<sup>1</sup>. Features are maintained in the ART Backlog and sized to fit in a PI so that each delivers new value<sup>2</sup>. Stories are short descriptions of a small piece of desired functionality written from the user's perspective. Stories are the primary artifact used to define system behavior in Agile<sup>3</sup>. Stories are small and must be completed in a single iteration<sup>3</sup>. Therefore, features can be larger than an iteration but stories should be small enough to fit into an iteration. #### NEW QUESTION # 218

Architectural Runway must be continuously maintained

- A. TRUE
- B. FALSE

**Answer: A**

#### NEW QUESTION # 219

Which statement describes a cross-functional team?

- A. Each team member can define, build, and test a component or Feature
- B. Each team can deliver Features across multiple domains
- C. Each team member can do all the activities to define, build, and test a Solution
- D. Each team member can define and build, with a System Team testing the Solution

**Answer: A**

Explanation:

A cross-functional team is a group of people with different functional expertise working toward a common goal<sup>1</sup>. In SAFe, a cross-functional team has all the necessary skills to turn an idea into a working product<sup>2</sup>. This means that each team member can define, build, and test a component or Feature, without relying on external dependencies or handoffs<sup>3</sup>. This enables the team to deliver value faster, with higher quality and lower risk.
