ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q95-Q100):

NEW QUESTION # 95
What CI Field can be used to identify aging Cls.
Response:

- A. Discovery Source
- B. Most recent discovery
- C. Updated
- D. Created

Answer: B

NEW QUESTION # 96
Which of the below choices are needed for Quick Discovery? (Choose two.)

- A. Discovery Schedule
- B. PID
- C. Target IP
- D. MID Server

Answer: C,D

Explanation:
Quick Discovery is a wizard that helps you get up and running with Discovery quickly. It discovers both physical and logical components, including virtual machines, servers, storage, databases, applications, and more. To use Quick Discovery, you need to have a MID Server installed and configured, and provide a target IP range or subnet to scan. You do not need to create a Discovery Schedule or a PID for Quick Discovery.

NEW QUESTION # 97
Which best describes Discovery schedule of type Configuration Item?

- A. Collects complete information from the scanned IP ranges and sends it to the CMDB.
- B. Verifies Configuration Item data from the scanned IP ranges against the data in the CMDB.
- C. Creates only a list of discovered IPs in both IPv4 and IPv6 formats.
- D. Directly populates records in the assets table.

Answer: A

Explanation:
A Discovery schedule of type Configuration Item collects complete information from the scanned IP ranges and sends it to the CMDB. This type of schedule runs a series of probes and sensors to identify and classify the devices and applications on the network, and to create or update the corresponding configuration items in the CMDB. A Discovery schedule of type Configuration Item can also run patterns to discover more details and relationships about the configuration items.

NEW QUESTION # 98
After navigating to an Automaton Error Messages list from Discovery > Home, how are the options on the right navigation pane categorized? (Choose two.)

- A. SELECT ALL
- B. SELECT ONE
- C. ACTION ON SELECTED
- D. ACTION ON ALL

Answer: A,C

Explanation:
The Automation Error Messages list displays the errors that occurred during the execution of Discovery automation scripts. From this list, you can view the details of each error, such as the script name, the error message, the device, and the time. You can also perform actions on the errors, such as retrying the script, ignoring the error, or creating an incident. To do so, you can use the options on the right navigation pane, which are categorized as follows1:
* SELECT ALL: This option allows you to select all the errors in the list.
* SELECT ONE: This option allows you to select one error in the list by clicking on the checkbox next to it.
* ACTION ON SELECTED: This option allows you to perform an action on the selected errors, such as Retry, Ignore, or Create Incident. You can also choose to perform the action on all the errors in the list by selecting the All option from the drop-down menu.
* ACTION ON ALL: This option allows you to perform an action on all the errors in the list, regardless of the selection. You can choose from the same actions as the ACTION ON SELECTED option.
:
Discovery error messages: This article explains the different types of error messages and warnings in Discovery, and how to access and manage them.

NEW QUESTION # 99

Which choice best describes what happens when, by default, duplicate CIs are detected during identification and reconciliation?

- A. The next discovery is stopped for the CI that is duplicated.
- B. Each set of duplicate CIs is added to a de-duplication task.
- C. An association identification rule is created automatically.
- D. A notification is sent to the CI owner.

Answer: B
