We will provide you with three different versions of our Professional-Cloud-Developer exam questions. The PDF version allows you to download our Professional-Cloud-Developer quiz prep. After you download the PDF version of our learning material, you can print it out. In this way, you can learn our Professional-Cloud-Developer quiz prep on paper. We believe that it will be more convenient for you to take notes. Our website is a very safe and regular platform. You can download our Professional-Cloud-Developer Exam Guide with assurance. You can take full advantage of the fragmented time to learn, and eventually pass the authorization of Professional-Cloud-Developer exam.

Target Audience and Prerequisites

The Google Professional Cloud Developer certification exam is intended for those App Developers who are involved in designing and building applications to run on Google Cloud Platform. These specialists should be familiar with the Google Cloud Platform products, such as Cloud Storage, Compute Engine, Security Key Enforcement, as well as BigQuery.

There are no obligatory requirements that the candidates need to meet to become eligible for the qualifying test. Nevertheless, the target individuals are recommended to have three or more years of industry experience, including one or more years of experience in

designing and managing solutions using Google Cloud. Besides that, the students need to develop a comprehensive understanding of the exam topics.

Latest Google Professional-Cloud-Developer Exam Questions in Three Formats

ExamBoosts provides the Professional-Cloud-Developer Exam Questions and answers guide in PDF format, making it simple to download and use on any device. You can study at your own pace and convenience with the Google Professional-Cloud-Developer PDF Questions, without having to attend any in-person seminars. This means you may study for the Professional-Cloud-Developer exam from the comfort of your own home whenever you want.

Being a Google-certified professional developer is a significant achievement that can open up new job opportunities and make one an invaluable asset to an organization. It also showcases a developer's expertise and skillset, improving their credibility and knowledge in the eyes of employers and partners. In conclusion, Google's Professional-Cloud-Developer Exam is an excellent opportunity for developers to earn a certification that validates their expertise in cloud computing, helping them to remain relevant and competitive in today's fast-paced tech industry.

Google Certified Professional - Cloud Developer Sample Questions (Q88-Q93):

NEW QUESTION # 88

You are developing an HTTP API hosted on a Compute Engine virtual machine instance that needs to be invoked by multiple clients within the same Virtual Private Cloud (VPC). You want clients to be able to get the IP address of the service.

What should you do?

- A. Reserve a static external IP address and assign it to an HTTP(S) load balancing service's forwarding rule. Clients should use this IP address to connect to the service.
- B. Reserve a static external IP address and assign it to an HTTP(S) load balancing service's forwarding rule. Then, define an A record in Cloud DNS. Clients should use the name of the A record to connect to the service.
- C. Ensure that clients use Compute Engine internal DNS by connecting to the instance name with the url `https://[INSTANCE_NAME].[ZONE].c.[PROJECT_ID].internal/`.
- **D. Ensure that clients use Compute Engine internal DNS by connecting to the instance name with the url `https://[API_NAME]/[API_VERSION]/`.**

Answer: D

NEW QUESTION # 89

You have an application deployed in production. When a new version is deployed, some issues don't arise until the application receives traffic from users in production. You want to reduce both the impact and the number of users affected.

Which deployment strategy should you use?

- A. Canary deployment
- **B. Blue/green deployment**
- C. Recreate deployment
- D. Rolling deployment

Answer: B

Explanation:

NEW QUESTION # 90

You are developing an ecommerce web application that uses App Engine standard environment and Memorystore for Redis. When

a user logs into the app, the application caches the user's information (e.g., session, name, address, preferences), which is stored for quick retrieval during checkout.

While testing your application in a browser, you get a 502 Bad Gateway error. You have determined that the application is not connecting to Memorystore. What is the reason for this error?

- **A. Your Memorystore for Redis instance was deployed without a public IP address.**
- B. You configured your Serverless VPC Access connector in a different region than your App Engine instance.
- C. The firewall rule allowing a connection between App Engine and Memorystore was removed during an infrastructure update by the DevOps team.
- D. You configured your application to use a Serverless VPC Access connector on a different subnet in a different availability zone than your App Engine instance.

Answer: A

Explanation:

NEW QUESTION # 91

Your API backend is running on multiple cloud providers. You want to generate reports for the network latency of your API. Which two steps should you take? (Choose two.)

- **A. Use Stackdriver Trace to generate reports.**
- B. Use Stackdriver Debugger to generate report.
- C. Use Zipkin collector to gather data.
- **D. Use Stackdriver Profiler to generate report.**
- E. Use Fluentd agent to gather data.

Answer: A,D

Explanation:

NEW QUESTION # 92

You are designing a resource-sharing policy for applications used by different teams in a Google Kubernetes Engine cluster. You need to ensure that all applications can access the resources needed to run. What should you do? (Choose two.)

- A. Use the Anthos Policy Controller to enforce label annotations on all namespaces. Use taints and tolerations to allow resource sharing for namespaces.
- **B. Create a LimitRange to specify the default compute resource requirements for each namespace.**
- C. Specify the resource limits and requests in the object specifications.
- **D. Create a namespace for each team, and attach resource quotas to each namespace.**
- E. Create a Kubernetes service account (KSA) for each application, and assign each KSA to the namespace.

Answer: B,D
