Efficient Reliable Mule-Dev-201 Test Tips Spend Your Little Time and Energy to Pass Mule-Dev-201 exam once

Our Mule-Dev-201 study questions will update frequently to guarantee that you can get enough test banks and follow the trend in the theory and the practice. That is to say, our Mule-Dev-201 training materials boost many advantages and to gain a better understanding of our Mule-Dev-201 Guide Torrent. It is very worthy for you to buy our Mule-Dev-201 practice guide and please trust us. If you still can't fully believe us, please read the introduction of the features and the functions of our Mule-Dev-201 learning questions.

Salesforce Certified MuleSoft Developer Sample Questions (Q143-Q148):

NEW QUESTION # 143
In the execution of scatter gather, the"sleep 2 sec" Flow Reference takes about 2 sec to complete, and the

"sleep 8 sec" Flow Reference takes about 8 sec to complete.
About how many sec does it take from the Scatter-Gather is called until the "Set Payload" transformer is called?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:
Correct answer is 8 as events are processed in parallel in case of scatter gather router

NEW QUESTION # 144
Refer to the exhibits. The Mule application does NOT define any global error handler elements. A web client sends a GET request to the HTTP Listener. What response message is returned to the web client?

- A. "Start"
- B. -...
- C. "Siring is not blank"
- D. "End"

Answer: C

NEW QUESTION # 145
Refer to the exhibit.
What is the correct syntax to add an employee ID as a URI parameter in an HTTP Listener path?

- A. (employeeID)
- B. ${emp!oyeeID}
- C. {employeeID}
- D. # [employeeID]

Answer: C

Explanation:
Paths
The path of an HTTP listener can be static, which requires exact matches, or feature placeholders.
Placeholders can be wildcards (*), which match against anything they are compared to, or parameters ({param}), which not only match against anything but also capture those values on a URI parameters map.
Take the following example paths for three listeners using a configuration that establishes api/v1 as the base path:
account/mulesoft/main-contact:
only match the exact path request http://awesome-company.com/api/v1/account/mulesoft/main-contact account/{accountId}/main-contact:
matches all path requests structured similarly, such as http://awesome-company.com/api/v1/account/salesforce
/main-contact, and save salesforce as the value of accountId.
account/{accountId}/*:
matches all path requests different from main-contact, such as http://awesome-company.com/api/v1/account
/mulesoft/users, and save mulesoft as the value of accountId.
Mule Ref Doc : https://docs.mulesoft.com/http-connector/1.6/http-listener-ref#paths

NEW QUESTION # 146
What happens to the attributes of a Mule event in a flow after an outbound HTTP Request is made?

- A. Attributes are replaced with new attributes from the HTTP Request response (which might be null)
- B. Attributes do not change
- C. New attributes may be added from the HTTP response headers, but no headers are ever removed

- D. Previous attributes are passed unchanged

Answer: A

Explanation:
Attributes are replaced with new attributes from the HTTP Request response.
Attributes include everything apart from Payload/body. For ex: Headers, query parameters, URI parameters.
So, when outbound HTTP request is made, new attributes need to pass the outbound HTTP request and old attributes are replaced.
I have created below diagram to make it easy for you to understand:
Diagram Description automatically generated

NEW QUESTION # 147

A Mule application contains a global error handler configured to catch any errors.
Where must the global error handler be specified so that the global error handler catches all errors from flows without their own error handlers?

- A. Nowhere, the global error handler is automatically used
- B. A configuration properties file
- C. A global element
- D. The pom.xml file

Answer: C

Explanation:
Correct answer is A global element
Global error handlers are to be created in global element .
Quick note to remember here is Global error handlers come in to picture only when there are no error handlers specified as flow level.
Steps to create Global error handler
1) Click Global Elements to open Global Configuration Elements. Global Elements is located below the Studio canvas
2) In Global Configuration Elements, click Create to open the Choose Global Type dialog Graphical user interface, text, application, chat or text message Description automatically generated
3) From the dialog, select Global Configuration -# Configuration, and then click OK to open the Configuration dialog.
Graphical user interface, text, application, email Description automatically generated
4) From the select Configuration dialog, select allErrorHandler for the Default Error Handler field, and click OK.

NEW QUESTION # 148
