Fortinet NSE 7 - OT Security 7.2 Sample Questions (Q75-Q80):

NEW QUESTION # 75

As an OT network administrator, you are managing three FortiGate devices that each protect different levels on the Purdue model.

To increase traffic visibility, you are required to implement additional security measures to detect protocols from PLCs. Which security sensor must you implement to detect protocols on the OT network?

- A. Deep packet inspection (DPI)
- B. Application control (AC)
- C. Antivirus inspection
- **D. Intrusion prevention system (IPS)**

Answer: D

Explanation:

The FortiGuard Operational Technology (OT) Security Service for FortiGate combines IPS and application control signatures tailored to OT environments, enabling detection and protection of OT-specific protocols and threats.

IPS is essential for detecting network-level threats and protocols associated with OT devices including PLCs.

Deep packet inspection (DPI) is part of the traffic analysis process but the primary sensor for detecting specific OT protocols is IPS. Antivirus and application control are generally less focused on protocol detection for OT networks compared to IPS.

NEW QUESTION # 76

Operational technology (OT) network analysts run different levels of reports to identify failures that could put the network at risk. Some of these reports may be related to device performance.

Which FortiSIEM reporting method helps identify device failures?

- A. Payment card industry (PCI) logging reports
- **B. Configuration management database (CMDB) operational reports**
- C. Device inventory reports
- D. Business service reports

Answer: B

Explanation:

The Configuration Management Database (CMDB) operational reports in FortiSIEM are used to monitor and analyze the operational status of devices. These reports can help identify device failures by providing detailed insights into device configurations, statuses, and performance metrics. CMDB operational reports are particularly useful for troubleshooting and maintaining the health of devices in an OT network, ensuring that any potential failures or risks to the network are promptly addressed.

NEW QUESTION # 77

Refer to the exhibit, which shows a non-protected OT environment.

An administrator needs to implement proper protection on the OT network.

Which three steps should an administrator take to protect the OT network? (Choose three.)

- A. Deploy a FortiGate device within each ICS network.
- **B. Configure firewall policies with industrial protocol sensors**
- C. Use segmentation
- **D. Configure firewall policies with web filter to protect the different ICS networks.**
- **E. Deploy an edge FortiGate between the internet and an OT network as a one-arm sniffer.**

Answer: B,D,E

NEW QUESTION # 78

Which three Fortinet products can be used for device identification in an OT industrial control system (ICS)? (Choose three.)

- **A. FortiGate**
- **B. FortiSIEM**
- **C. FortiNAC**
- D. FortiManager
- E. FortiAnalyzer

Answer: A,B,C

Explanation:

Explanation

A: FortiNAC - FortiNAC is a network access control solution that provides visibility and control over network devices. It can identify devices, enforce access policies, and automate threat response.

D: FortiSIEM - FortiSIEM is a security information and event management solution that can collect and analyze data from multiple sources, including network devices and servers. It can help identify potential security threats, as well as monitor compliance with security policies and regulations.

E: FortiAnalyzer - FortiAnalyzer is a central logging and reporting solution that collects and analyzes data from multiple sources, including FortiNAC and FortiSIEM. It can provide insights into network activity and help identify anomalies or security threats.

NEW QUESTION # 79

Refer to the exhibit.

An operational technology rule is created and successfully activated to monitor the Modbus protocol on FortiSIEM. However, the rule does not trigger incidents despite Modbus traffic and application logs being received correctly by FortiSIEM.

Which statement correctly describes the issue on the rule configuration?

- A. The first condition on the SubPattern filter must use the OR logical operator.
- B. The SubPattern is missing the filter to match the Modbus protocol.
- C. The Aggregate attribute COUNT expression is incompatible with the filters.
- **D. The attributes in the Group By section must match the ones in Filters section.**

Answer: D
