ISC2 CC Exam Questions With Correct Answers

Triffid Corporation has a rule that all employees working with sensitive hardcopy documents must put the documents into a safe at the end of the workday, where they are locked up until the following workday. What kind of control is the process of putting the documents into the safe? (D1, L1.3.1)

- A) Administrative
- B) Tangential
- C) Physical

D) Technical - correct answers ✓✓ A is the correct answer. The process itself is an administrative control; rules and practices are administrative. The safe itself is physical, but the question asked specifically about process, not the safe, so C is incorrect. Neither the safe nor the process is part of the IT environment, so this is not a technical control; D is incorrect. B is incorrect; "tangential" is not a term commonly used to describe a particular type of security control, and is used here only as a distractor.

A vendor sells a particular operating system (OS). In order to deploy the OS securely on different platforms, the vendor publishes several sets of instructions on how to install it, depending on which platform the customer is using. This is an example of a _____. (D1, L1.4.2)

- A) Law
- B) Procedure
- C) Standard

D) Policy - correct answers ✓✓ B is correct. This is a set of instructions to perform a particular task, so it is a procedure (several procedures, actually—one for each platform). A is incorrect; the instructions are not a governmental mandate. C is incorrect, because the instructions are particular to a specific product, not accepted throughout the industry. D is incorrect, because the instructions are not particular to a given organization.

ISC CC Exam Syllabus Topics:

Topic	Details
Topic 1	Access Controls Concepts: This section measures skills of Access Control Specialists and Physical Security Managers in understanding physical and logical access controls. Topics include physical security measures like badge systems, CCTV, monitoring, and managing authorized versus unauthorized personnel. Logical access control concepts such as the principle of least privilege, segregation of duties, discretionary access control, mandatory access control, and role-based access control are essential for controlling information system access.

Topic 2	• Business Continuity (BC), Disaster Recovery (DR) & Incident Response Concepts: This domain targets Business Continuity Planners and Incident Response Coordinators. It focuses on the purpose, importance, and core components of business continuity, disaster recovery, and incident response. Candidates learn how to prepare for and manage disruptions while maintaining or quickly restoring critical business operations and IT services.
Topic 3	• Network Security: This domain assesses the knowledge of Network Security Engineers and Cybersecurity Specialists. It covers foundational computer networking concepts including OSI and TCP • IP models, IP addressing, and network ports. Candidates study network threats such as DDoS attacks, malware variants, and man-in-the-middle attacks, along with detection tools like IDS, HIDS, and NIDS. Prevention strategies including firewalls and antivirus software are included. The domain also addresses network security infrastructure encompassing on-premises data centers, design techniques like segmentation and defense in depth, and cloud security models such as SaaS, IaaS, and hybrid deployments.
Topic 4	• Security Principles: This section of the exam measures skills of Security Analysts and Information Assurance Specialists and covers fundamental security concepts such as confidentiality, integrity, availability, authentication methods including multi-factor authentication, non-repudiation, and privacy. It also includes understanding the risk management process with emphasis on identifying, assessing, and treating risks based on priorities and tolerance. Candidates are expected to know various security controls, including technical, administrative, and physical, as well as the ISC2 professional code of ethics. Governance processes such as policies, procedures, standards, regulations, and laws are also covered to ensure adherence to organizational and legal requirements.
Topic 5	• Security Operations: This area targets Security Operations Center (SOC) Analysts and System Administrators. It covers data security with encryption methods, secure handling of data including classification and retention, and the importance of logging and monitoring security events. System hardening through configuration management, baselines, updates, and patching is included. Best practice security policies such as data handling, password, acceptable use, BYOD, change management, and privacy policies are emphasized. Finally, the domain highlights security awareness training addressing social engineering awareness and password protection to foster a security-conscious organizational culture.
