## Amazon AWS Certified SysOps Administrator - Associate Sample Questions (Q200-Q205):

### NEW QUESTION # 200

If an IAM policy has multiple conditions, or if a condition has multiple keys, its boolean outcome will be calculated using a logical \_\_\_\_\_ operation.

- A. OR
- **B. AND**
- C. NAND
- D. None of these

**Answer: B**

Explanation:

Explanation

If there are multiple condition operators, or if there are multiple keys attached to a single condition operator, the conditions are evaluated using a logical AND.

### NEW QUESTION # 201

A fleet of servers must send local logs to Amazon CloudWatch. How should the servers be configured to meet this requirement?

- **A. Install and configure the unified CloudWatch agent.**
- B. Install and configure the Amazon Inspector agent.
- C. Configure AWS Config to forward events to CloudWatch.
- D. Configure a Simple Network Management Protocol (SNMP) agent to forward events to CloudWatch.

**Answer: A**

### NEW QUESTION # 202

An organization has launched 5 instances: 2 for production and 3 for testing. The organization wants that one particular group of IAM users should only access the test instances and not the production ones. How can the organization set that as a part of the policy?

- A. Create an IAM policy with a condition which allows access to only small instances
- **B. Define the tags on the test and production servers and add a condition to the IAM policy which allows access to specific tags**
- C. Launch the test and production instances in separate regions and allow region wise access to the group
- D. Define the IAM policy which allows access based on the instance ID

**Answer: B**

Explanation:

Explanation

AWS Identity and Access Management is a web service which allows organizations to manage users and user permissions for various AWS services. The user can add conditions as a part of the IAM policies. The condition can be set on AWS Tags, Time, and Client IP as well as on various parameters. If the organization wants the user to access only specific instances he should define proper tags and add to the IAM policy condition. The sample policy is shown below.

### NEW QUESTION # 203

A user has configured ELB with two EBS backed instances. The user has stopped the instances for 1 week to save costs. The user restarts the instances after 1 week. Which of the below mentioned statements will help the user to understand the ELB and instance registration better?

- A. The instances will automatically get registered with ELB
- B. The user cannot stop the instances if they are registered with ELB
- C. If the instances have the same Elastic IP assigned after reboot they will be registered with ELB
- D. There is no way to register the stopped instances with ELB

**Answer: A**

#### **NEW QUESTION # 204**

A user has created a Cloudformation stack. The stack creates AWS services, such as EC2 instances, ELB, AutoScaling, and RDS. While creating the stack it created EC2, ELB and AutoScaling but failed to create RDS. What will Cloudformation do in this scenario?

- A. It will warn the user about the error and ask the user to manually create RDS
- B. It will wait for the user's input about the error and correct the mistake after the input
- C. Cloudformation can never throw an error after launching a few services since it verifies all the steps before launching
- D. Rollback all the changes and terminate all the created services

**Answer: D**

Explanation:

AWS Cloudformation is an application management tool which provides application modelling, deployment, configuration, management and related activities. The AWS Cloudformation stack is a collection of AWS resources which are created and managed as a single unit when AWS CloudFormation instantiates a template. If any of the services fails to launch, Cloudformation will rollback all the changes and terminate or delete all the created services.

#### **NEW QUESTION # 205**

.....
