## New Data-Architect Test Format - Data-Architect Test Lab Questions

Going through our Salesforce Data-Architect certification exam prep material there remains no chance of failure in the Salesforce exam. So do not waste your time anymore, avail the best Salesforce Data-Architect Exam Practice material and start your journey towards a bright career.

Salesforce Data-Architect Certification is highly valued by employers and can open up many opportunities for professionals in the field. Certified Data Architects are in high demand and can work in a variety of roles, including data architects, data analysts, data scientists, and business intelligence specialists. Salesforce Certified Data Architect certification also demonstrates a commitment to continuous learning and professional development, which is highly valued by employers.

## Salesforce Certified Data Architect Sample Questions (Q238-Q243):

### NEW QUESTION # 238

DreamHouse Realty has a legacy system that captures Branch Offices and Transactions. DreamHouse Realty has 15 Branch Offices. Transactions can relate to any Branch Office. DreamHouse Realty has created hundreds of thousands of Transactions per year.

A Data Architect needs to denormalize this data model into a single Transaction object with a Branch Office picklist.

What are two important considerations for the Data Architect in this scenario? (Choose two.)

- A. Limitations on master-detail relationships.
- B. Standard list view in-line editing.
- C. Limitations on Org data storage.
- D. Bulk API limitations on picklist fields.

Answer: C,D

Explanation:

The Data Architect should consider the limitations on Org data storage and the Bulk API limitations on picklist fields when denormalizing the data model into a single Transaction object with a Branch Office picklist. The Org data storage limit is the total amount of data that can be stored in a Salesforce Org, and it depends on the edition and license type of the Org1. The Bulk API limit on picklist fields is the maximum number of values that can be imported or exported using the Bulk API, and it is 1,000 values per picklist field2. These limitations could affect the performance and scalability of the data model, and the Data Architect should plan accordingly.

#### NEW QUESTION # 239

Northern Trail Outfitters <NTO> is streaming IoT data from connected devices to a cloud database. Every 24 hours, 100,000 records are generated.

NIO employees will need to see these IoT records within Salesforce and generate weekly reports on it. Developers may also need to write programmatic logic to aggregate the records and incorporate them into workflows.

Which data pattern will allow a data architect to satisfy these requirements, while also keeping limits in mind?

- A. Unidirectional integration
- B. Virtualization
- C. Persistence
- D. Bidirectional integration

**Answer: C**

Explanation:

Persistence is the data pattern that will allow a data architect to satisfy the requirements, while also keeping limits in mind.

Persistence means storing data from external sources in Salesforce objects, either standard or custom. This allows you to access the data within Salesforce and use it for reporting, analytics, workflows, and other features. Persistence also helps you avoid hitting API limits or performance issues when accessing large volumes of data from external systems. You can use various tools such as Data Loader, Bulk API, or Platform Events to persist IoT data from connected devices to a cloud database in Salesforce.

#### NEW QUESTION # 240

Universal Containers is establishing a call center that will use Salesforce. UC receives 10 million calls and creates 100 million cases every month. Cases are linked to a custom call object using lookup relationship. UC would like to run reports and dashboard to better understand different case types being created on calls to better serve customers.

What solution should a data architect recommend to meet the business requirement?

- A. Archive records to a data warehouse and run analytics on the data warehouse.
- B. Leverage big objects to archive records and Einstein Analytics to run reports.
- C. Leverage out-of-the-box reports and dashboard on case and interactive voice response (IVR) custom object.
- D. Leverage custom objects to store aggregate data and run analytics.

**Answer: B**

#### NEW QUESTION # 241

Universal Containers (UC) has 1,000 accounts and 50,000 opportunities. UC has an enterprise security requirement to export all sales data outside of Salesforce on a weekly basis. The security requirement also calls for exporting key operational data that includes events such as file downloads, logins, logouts, etc. Which two recommended approaches would address the above requirement?

- A. Use Weekly Export to extract transactional data to on-premise systems.
- B. Use Event Monitoring to extract event data to on-premise systems.
- C. Use a custom built extract job to extract operational data to on-premise systems.
- D. Use Field Audit History to capture operational data and extract it to on-premise systems.

**Answer: C**

#### NEW QUESTION # 242

A shipping and logistics company has created a large number of reports within Sales Cloud since Salesforce was introduced. Some of these reports analyze large amounts of data regarding the whereabouts of the company's containers, and they are starting to time out when users are trying to run the reports. What is a recommended approach to avoid these time-out issues?

- A. Improve reporting performance by creating a dashboard that is scheduled to run the reports only once per day.
- B. Improve reporting performance by creating a custom Visualforce report that is using a cache of the records in the report.
- **C. Improve reporting performance by replacing the existing reports in Sales Cloud with new reports based on Analytics Cloud.**
- D. Improve reporting performance by creating an Apex trigger for the Report object that will pre-fetch data before the report is run.

**Answer: C**

Explanation:

Improving reporting performance by replacing the existing reports in Sales Cloud with new reports based on Analytics Cloud can avoid the time-out issues by leveraging the power and scalability of Analytics Cloud.

Analytics Cloud can handle large volumes of data and provide faster and more interactive reports than Sales Cloud .
