TDA-C01 Dumps Guide - TDA-C01 Exam Tips

Itcerttest is a professional website. It focuses on the most advanced Tableau TDA-C01 for the majority of candidates. With Itcerttest, you no longer need to worry about the Tableau TDA-C01 exam. Itcerttest exam questions have good quality and good service. As long as you choose Itcerttest, Itcerttest will be able to help you pass the exam, and allow you to achieve a high level of efficiency in a short time.

Tableau Certified Data Analyst Sample Questions (Q70-Q75):

NEW QUESTION # 70

You have the following dataset in Microsoft Excel.

- ☐ You are using interpreter to cleans the dataset. Data interpreter provides the following results.
- ☐ How many rows of data will be ingested into Tableau as values?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

Data interpreter is a feature that helps you clean and structure your data in Excel before importing it into Tableau. It detects and removes any headers, footers, subtotals, or other elements that are not part of the actual data. It also splits any merged cells and fills in any missing values. In this case, data interpreter provides the following results:

It removes the first three rows and the last two rows that contain headers and footers.

It splits the merged cells in column A and fills in the missing values with "Fiction" or "Non-Fiction".

It does not remove or change any other rows or cells.

Therefore, the number of rows of data that will be ingested into Tableau as values is 17, which is the number of rows left after removing the headers and footers. Reference: https://help.tableau.com/current/pro/desktop/en-us/importing_cleaning_up_data.htm

https://help.tableau.com/current/pro/desktop/en-us/importing_data_interpreter.htm

NEW QUESTION # 71

You have the following visualization.

☐ You want the count of Returns displayed only for the first year in the table.

How should you complete the formula in the calculated field? (Use the dropdowns in the Answer Area to select the correct options to complete the formula.)

☐

Answer:

Explanation:

☐

NEW QUESTION # 72

You create the following story that contains two story point.

You want to change the story point format to show the current story point number out of the total number of story points.

Which Layout option should you use?

- A. Caption boxes
- B. Arrows only
- **C. Numbers**
- D. Dots

Answer: C

Explanation:

To change the story point format to show the current story point number out of the total number of story points, you should use the Numbers option in the Layout tab. This option will display the story points as numbers in a horizontal or vertical sequence, such as 1/2, 2/2. You can also choose to show or hide the next and previous arrows for navigation. The Numbers option will help you indicate the progress and order of your story points more clearly than the other options. References:

NEW QUESTION # 73

You want to add a comment to March 2020 as shown in the following visualization.

You have the following sets in a Tableau workbook

* Top N Customers

* Customers of 2020

* Top N Products

* Sellers of 2020

Which two sets can you combine? Choose two

- A. Sellers of 2020
- B. Top N Products
- C. Customers of 2020
- D. Top N Customers

Answer: A,B

NEW QUESTION # 74

You have the following dashboard.

Currently the map is used as a filter that affects the data on the other sheets of the dashboard. You need to configure the dashboard to ensure that selecting a data point on the map only filters the Detail table. What should you do?

- A. From the context menu of Profits by State deselect Use as Filter
- B. From the context menu of Sales over time select Ignore Actions
- C. From the context menu of Sales over time select Remove Dashboard Item
- D. From the context menu of Sales over time select Deselect

Answer: B

Explanation:

To configure the dashboard to ensure that selecting a data point on the map only filters the Detail table, you should select Ignore Actions from the context menu of Sales over time. Ignore Actions is a feature that allows you to exclude a sheet from being affected by any actions on the dashboard, such as filters or highlights. You can select Ignore Actions by right-clicking on a sheet on the dashboard and selecting Ignore Actions from the menu.

In this case, you want to exclude Sales over time from being filtered by the map, so you should select Ignore Actions from its context menu. This will make Sales over time ignore any selections on the map and show all values. The Detail table will still be filtered by the map as usual.

The other options are not correct for this scenario. Removing Dashboard Item will delete Sales over time from the dashboard, which is not what you want. Deselecting Use as Filter will disable the map as a filter for any sheet on the dashboard, which is not what you want. Selecting Deselect will clear any selections on the map, but it will not prevent Sales over time from being filtered by future selections. References: <https://help.tableau.com/current/pro/desktop/en-us/actions.htm>

https://help.tableau.com/current/pro/desktop/en-us/actions_ignore.htm

On a Tableau dashboard, when a map is used as a filter, it affects all other sheets in the dashboard by default.

To restrict the filter action to only affect the Detail table and not the 'Sales over time' chart, you would modify the action settings. By selecting "Ignore Actions" from the context menu of the 'Sales over time' chart, it will no longer respond to the filtering action initiated by selecting data points on the map.

NEW QUESTION # 75

.....

Our TDA-C01 preparation exam have assembled a team of professional experts incorporating domestic and overseas experts and scholars to research and design related exam bank, committing great efforts to help the candidates to pass the TDA-C01 exam. Most of the experts have been studying in the professional field for many years and have accumulated much experience in our TDA-C01 Practice Questions.
