## Salesforce Salesforce-Certified-Administrator Tests & Salesforce-Certified-Administrator Lernhilfe

Wenn Sie deprimiert sind, sollen Sie am besten etwas lernen. Lernen werden Sie unbesiegbar machen. Die Fragenkataloge zur Salesforce Salesforce-Certified-Administrator Zertifizierungsprüfung von ITZert werden Sie sicher unbesiegbar machen. Mit diesen Fragenkataloge können Sie sicher das internationale akzeptierte Salesforce Salesforce-Certified-Administrator Zertifikat bekommen. Sie können deshalb viel Geld verdienen und Ihre Lebensumstände werden sicher gründlich verbessert. Werden Sie noch deprimiert? Nein, Sie werden sicher stolz darauf. Sie sollen ITZert danken, die Ihnen so gute Fragenkataloge bietet. ITZert hilft Ihnen, wenn Sie deprimiert sind. Er hilft Ihnen, Ihre Qualität zu verbessern und Ihren perfekten Lebenswert zu repräsentieren.

## Salesforce Certified Administrator Salesforce-Certified-Administrator Prüfungsfragen mit Lösungen (Q200-Q205):

### 200. Frage

The administrator for Cloud Kicks needs to give access to a new custom object with custom fields to more than one user. Which two options should an administrator use to meet this requirement?

Choose 2 answers

- **A. Assign permission set group to Users**
- B. Add to manual sharing list
- **C. Create a Permission Set**
- D. Edit organization-wide defaults

**Antwort: A,C**

Begründung:  
Explanation

A permission set group is a collection of permission sets that can be assigned to users as one unit; it simplifies permission management by reducing the number of permission assignments needed for users who require multiple permission sets. A permission set is a collection of settings and permissions that give users access to various tools and functions in Salesforce; it can be used to extend users' access beyond their profile without changing their profile. Creating permission sets and assigning permission set groups can help Cloud Kicks give access to new custom object with custom fields to more than one user by creating permission sets that include access to new custom object with custom fields and assigning permission set groups that contain those permission sets to users who need them. Adding users to manual sharing list or editing organization-wide defaults are not options for giving access to new custom object with custom fields to more than one user; they either do not apply to custom objects or do not grant object-level access. ### 201. Frage

Cloud Kicks wants to track shoe designs by products. Shoe designs should be unable to be deleted, and there can be multiple designs for one product across various stages.

Which two steps should the administrator configure to meet this requirement?

Choose 2 answers

- A. Create a custom object for shoe designs.
- B. Add a custom master-detail field for shoe designs on the Product object,
- C. Use the standard object for designs.
- D. Configure a custom lookup field for shoe designs on the Product object.

**Antwort: A,D**

Begründung:

Explanation

To track shoe designs by products, prevent them from being deleted, and allow multiple designs for one product across various stages, the administrator should create a custom object for shoe designs and configure a custom lookup field for shoe designs on the Product object. This will create a one-to-many relationship between products and shoe designs, and allow users to link multiple shoe designs to one product record. To prevent shoe designs from being deleted, the administrator can use validation rules or permissions. Adding a custom master-detail field for shoe designs on the Product object will create a many-to-one relationship, which is not desired. Using the standard object for designs or configuring a validation rule will not meet the requirement. References: [https://help.salesforce.com/s/articleView?id=sf.customize\\_object\\_relationships\\_overview.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.customize_object_relationships_overview.htm&type=5)

### 202. Frage

A sales rep has left the company and an administrator has been asked to re-assign all their accounts and opportunities to a new sales rep and keep the teams as is.

Which tool should an administrator use to accomplish this?

- A. Dataloader.io
- B. Data Import Wizard
- C. Mass Transfer Tool
- D. Data Loader

**Antwort: C**

Begründung:

Explanation

The mass transfer tool allows you to transfer up to 250 records at a time from one user to another user while keeping the existing team members intact. You can access this tool from Setup by entering Mass Transfer Records in the Quick Find box. References: [https://help.salesforce.com/s/articleView?id=sf.mass\\_transfer\\_overview.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.mass_transfer_overview.htm&type=5)

### 203. Frage

Cloud Kicks has a Customer success agent going on leave and needs to change ownership on multiple cases.

Which two users are able to fulfill this request?

Choose 2 answers

- A. A user with ReadPermission on account.
- **B. A user with manager role above the agent.**
- **C. A user with the System Administrator profile.**
- D. A user with the Manage Cases Permission

**Antwort: B,C**

Begründung:

Explanation

A user with manager role above the agent can change ownership on multiple cases that are owned by the agent or by users below the agent in the role hierarchy. A user with the System Administrator profile can change ownership on any case, regardless of the owner or role hierarchy. References:

[https://help.salesforce.com/s/articleView?id=sf.case\\_change\\_owner.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.case_change_owner.htm&type=5)<https://help.salesforce.com/s/art>

## 204. Frage

Universal Container wants to prevent its service team from accessing deal records. While service users are unable to access deal list views, they are able to find the deal records via a search.

What options should the administrator adjust to fully restrict access?

- A. Page layouts and field-level security
- **B. Permissions and tab visibility**
- C. App permissions and search terms
- D. Record setting and search index

**Antwort: B**

Begründung:

Explanation

Permissions and tab visibility are two options that administrators can adjust to fully restrict access to records for certain users or profiles. Permissions determine what users can do with records, such as create, read, edit, delete, view all, or modify all. Tab visibility determines whether users can see a specific object tab in their app launcher or navigation bar. By setting permissions and tab visibility to none or hidden for deal records for service users or profiles, administrators can prevent them from accessing deal records via search or other methods. References:

[https://help.salesforce.com/s/articleView?id=sf.users\\_profiles\\_permissions.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.users_profiles_permissions.htm&type=5)<https://help.salesforce.co>
