Juniper Reliable JN0-224 Practice Materials: Automation and DevOps, Associate (JNCIA-DevOps) - TroytecDumps Exam Tool Guaranteed

Many people are keen on taking part in the JN0-224 exam, The competition between candidates is fierce. If you want to win out, you must master the knowledge excellently. Our JN0-224 training quiz is your best choice. With the assistance of our JN0-224 study materials, you will advance quickly. Also, all JN0-224 Guide materials are compiled and developed by our professional experts. So you can totally rely on our JN0-224 exam simulating to aid you pass the exam. Furthermore, you will learn all knowledge systematically, which can help you memorize better.

Juniper Automation and DevOps, Associate (JNCIA-DevOps) Sample Questions (Q26-Q31):

NEW QUESTION # 26

Which two statements are correct about a Python list data type? (Choose two.)

- A. The data contained in a list data type is sequenced and indexed starting from 0.
- B. The data contained in a list data type cannot be modified.
- C. The data contained in a list data type is not sequenced or indexed.
- D. The data contained in a list data type can be modified.

Answer: A,D

Explanation:

Python lists have the following characteristics:

Modifiable Data (A): Lists are mutable, meaning you can change, add, or remove elements after the list has been created.

Sequenced and Indexed (B): Lists maintain the order of their elements and are indexed starting from 0. This means you can access elements by their position in the list.

Option C is incorrect because lists are mutable, allowing modifications. Option D is incorrect because lists are indeed sequenced and indexed, unlike dictionaries.

Reference:

Python Official Documentation: Covers the properties of lists, including mutability and indexing.

Python Data Structures Guide: Explains list operations and how to manipulate them.

NEW QUESTION # 27

Which Junos configuration database is updated by PyEZ by default?

- A. private
- B. ephemeral
- C. shared
- D. dynamic

Answer: A

Explanation:

An event script is used to automate responses to system events in Junos, such as an interface going down. These scripts are triggered automatically when a specified event occurs, making them suitable for tasks like monitoring interface status and executing actions when the status changes.

Option B (event) is correct because event scripts are designed for reacting to system events like an interface going down.

Option A (commit) is used for configuration changes, Option C (operation) is used for operational tasks, and Option D (SNMP) is not applicable in this context.

Supporting Reference:

Juniper Networks Event Scripts Documentation: Details how event scripts are used to automate responses to specific system events in Junos

NEW QUESTION # 28

Which two statements are true about an XML schema document? (Choose two.)

- A. It is formatted as an XLT file.
- B. It is an authoritative source for operational and configuration XML.
- C. It is formatted as an XSD file.
- D. It cannot be examined in the Junos CLI.

Answer: B,C

Explanation:

An XML schema document (XSD) is a key component in defining the structure and constraints of XML data used in various applications, including Junos:

Authoritative Source (C): An XML schema document serves as the authoritative definition of the structure, content, and semantics of XML documents. It ensures that the XML data adheres to specific rules and formats, which is essential for both operational and configuration XML.

XSD Format (D): XML schema documents are typically written in the XSD (XML Schema Definition) format, which provides a formal description of the XML document's structure.

Option A is incorrect because XML schemas are not formatted as XLT files (which are related to XSLT transformations), and Option B is incorrect because XML schemas can indeed be examined in the Junos CLI using appropriate commands.

Reference:

W3C XML Schema Definition Language (XSD) Documentation: Provides comprehensive information on the XSD format.

Juniper Networks Documentation: Discusses the role of XML schemas in managing Junos configurations.

NEW QUESTION # 29

Which process is responsible for XML automation requests?

- A. rpd
- **B. mgd**
- C. jsrpd
- D. jsd

Answer: B

Explanation:

The mgd (Management Daemon) process in Junos is responsible for handling XML automation requests. This daemon manages the configuration and operational commands received via NETCONF, which uses XML for data exchange. The mgd process parses the XML data and applies the necessary configuration or retrieves the requested information.

Option B is correct because mgd is the process that handles XML-based requests in Junos.

Options A (jsrpd), C (rpd), and D (jsd) are incorrect because they are responsible for different functions, such as routing protocols and services, not XML automation.

Supporting Reference:

Juniper Networks Management Daemon (mgd) Documentation: Provides an overview of the responsibilities of the mgd process, including handling XML requests.

NEW QUESTION # 30

You must use Junos PyEZ to configure unique IP addresses on individual machines.

Which two features will permit this requirement? (Choose). I an SCP module

- A. an SCP module
- **B. a YAML data file**
- **C. a Jinja2 template**
- D. a BSON data file

Answer: B,C

Explanation:

To configure unique IP addresses on individual machines using Junos PyEZ, you can use the following features:

YAML Data File (C): YAML files are used to store configuration data in a human-readable format. They are often used in combination with Jinja2 templates to provide the data necessary for template rendering.

Jinja2 Template (D): Jinja2 is a templating engine for Python that allows you to create dynamic templates. When used with Junos PyEZ, a Jinja2 template can be filled with data (such as IP addresses from a YAML file) to generate configuration snippets that are applied to different devices.

Options A (SCP module) and B (BSON data file) are not typically used with Junos PyEZ for this purpose.

Reference:

Junos PyEZ Documentation: Discusses the use of YAML files and Jinja2 templates for generating configurations.

Jinja2 Templating Documentation: Provides details on how to create and use templates in Python scripts.

NEW QUESTION # 31

.....

Furthermore, it is our set of JN0-224 brain dumps that stamp your success with a marvelous score. The dumps include JN0-224 study questions that likely to be set in real JN0-224 exam. They provide you a swift understanding of the key points of JN0-224 covered under the syllabus contents. Going through them enhances your knowledge to the optimum level and enables you to ace exam without any hassle. No need of running after unreliable sources such as free courses, online JN0-224 courses for free and JN0-224 dumps that do not ensure a passing guarantee to the JN0-224 exam candidates.
