P.S. Free & New AZ-400 dumps are available on Google Drive shared by ExamTorrent: https://drive.google.com/open?id=1L2gcx7iUc0dik9DWI9OW-X5LsbWQMw_

Success in the AZ-400 certification exam is essential to advance your career. The Designing and Implementing Microsoft DevOps Solutions (AZ-400) certification can set you apart from the competition and give you the edge you need to grow in your career. However, preparing for the AZ-400 test can be challenging, mainly if you have limited time. Here's where ExamTorrent comes in with actual AZ-400 Questions. We at ExamTorrent are well aware of the importance of the Microsoft AZ-400 certification in order to stand out in today's competitive job environment.

The AZ-400 exam has been designed to test the candidate's ability to design and implement DevOps solutions using Microsoft Azure technologies. AZ-400 exam covers a wide range of topics, including DevOps practices, continuous integration and delivery, infrastructure and configuration management, monitoring and feedback, and security and compliance. Candidates are required to have a solid understanding of Microsoft Azure and should have experience working with Azure DevOps, Azure Resource Manager templates, and Azure services like Azure App Service, Azure Kubernetes Service, and Azure Functions. The AZ-400 Exam is a challenging certification that requires a deep understanding of DevOps and a thorough knowledge of Microsoft Azure technologies.

Verified New AZ-400 Test Cost - Valuable AZ-400 Exam Tool Guarantee Purchasing Safety

People always do things that will benefit them, so as get a certificate of the AZ-400 test dumps. Obtaining a certificate means more opportunity, a good job, a better salary, and a bright. The benefits are numerous, and we give you a quicker method to achieve this. Our AZ-400 Questions and answers list the knowledge point for you, and you just need to speed some of your time to practice. We are pass guarantee and money back guarantee. And the pass rate is 98.

Microsoft Designing and Implementing Microsoft DevOps Solutions Sample Questions (Q510-Q515):

NEW QUESTION # 510

You need to implement Project6.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation:

Scenario: Implement Project3, Project5, Project6, and Project7 based on the planned changes

Step 1: Open the release pipeline editor.

In the Releases tab of Azure Pipelines, select your release pipeline and choose Edit to open the pipeline editor.

Step 2: Enable Gates.

Choose the pre-deployment conditions icon for the Production stage to open the conditions panel. Enable gates by using the switch control in the Gates section.

Step 3: Add Query Work items.

Choose + Add and select the Query Work Items gate.

Configure the gate by selecting an existing work item query.

Note: A case for release gate is:

Incident and issues management. Ensure the required status for work items, incidents, and issues. For example, ensure deployment occurs only if no priority zero bugs exist, and validation that there are no active incidents takes place after deployment.

Topic 1, Contoso Case Study: 2

Overview

Existing Environment

Contoso, Ltd. is a manufacturing company that has a main office in Chicago.

Requirements

Contoso plans to improve its IT development and operations processes implementing Azure DevOps principles.

Contoso has an Azure subscription and creates an Azure DevOps organization.

The Azure DevOps organization includes:

The Docker extension

A deployment pool named Pool7 that contains 10 Azure virtual machines that run Windows Server 2016.

The Azure subscription contains an Azure Automation account.

Planned Changes

Contoso plans to create projects in Azure DevOps as shown in the following table.

Technical Requirements

Contoso identifies the following technical requirements:

- * Implement build agents for Project 1.

- * Whenever possible, use Azure resources

- * Avoid using deprecated technologies

- * Implement a code flow strategy for Project2 that will:

- * Enable Team 2 to submit pull requests for Project2.

- * Enable Team 2 to work independently on changes to a copy of Project2?

- * Ensure that any intermediary changes performed by Team 2 on a copy of Project2 will be subject to the same restrictions as the ones defined in the build policy of Project2.

- * Whenever possible, implement automation and minimize administrative effort.

- * Implement Project3, Project5, Project6, and Project7 based on the planned changes.

- * Implement Project4 and configure the project to push Docker images to Azure Container Registry.

NEW QUESTION # 511

Your company has a project in Azure DevOps named Project1.

All the developers at the company have Windows 10 devices.

You need to create a Get repository for Project1. The solution must meet the following requirements:

- * Support large binary files.

- * Store binary files outside of the repository.

- * Use a standard Get workflow to maintain the metadata of the binary files by using commits to the repository.

Answer:

Explanation:

Explanation

NEW QUESTION # 512

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique

solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You plan to update the Azure DevOps strategy of your company.

You need to identify the following issues as they occur during the company's development process:

- * Licensing violations
- * Prohibited libraries

Solution: You implement pre-deployment gates.

Does this meet the goal?

- A. No
- B. Yes

Answer: A

Explanation:

Instead use implement continuous integration.

Note: WhiteSource is the leader in continuous open source software security and compliance management. WhiteSource integrates into your build process, irrespective of your programming languages, build tools, or development environments. It works automatically, continuously, and silently in the background, checking the security, licensing, and quality of your open source components against WhiteSource constantly-updated definitive database of open source repositories.

NEW QUESTION # 513

You are configuring the settings of a new Git repository in Azure Repos.

You need to ensure that pull requests in a branch meet the following criteria before they are merged:

- * Committed code must compile successfully.
- * Pull requests must have a Quality Gate status of Passed in SonarCloud.

Which policy types should you configure for each requirement? To answer, drag the appropriate policy types to the correct requirements. Each policy type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

□ Explanation

□ Box 1: A check-in policy

Administrators of Team Foundation version control can add check-in policy requirements. These check-in policies require the user to take actions when they conduct a check-in to source control.

By default, the following check-in policy types are available:

- * Builds Requires that the last build was successful before a check-in.
- * Code Analysis Requires that code analysis is run before check-in.
- * Work Items Requires that one or more work items be associated with the check-in.

Box 2: Build policy

NEW QUESTION # 514

You need to create a virtual machine template in an Azure DevTest Labs environment named az400-9940427-dtl1. The template must be based on Windows Server 2016 Datacenter. Virtual machines created from the template must include the selenium tool and the Google Chrome browser.

To complete this task, sign in to the Microsoft Azure portal.

Answer:

Explanation:

See solution below.

Explanation:

1. Open Microsoft Azure Portal
2. Select All Services, and then select DevTest Labs in the DEVOPS section.
3. From the list of labs, select the az400-9940427-dtl1 lab
4. On the home page for your lab, select + Add on the toolbar.
5. Select the Windows Server 2016 Datacenter base image for the VM.
6. Select automation options at the bottom of the page above the Submit button.
7. You see the Azure Resource Manager template for creating the virtual machine.
8. The JSON segment in the resources section has the definition for the image type you selected earlier.
