

NCP-DB-6.10 New Study Guide | Valid Dumps NCP-DB-6.10 Book

The FreeDumps Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) exam dumps are being offered in three different formats. The names of these formats are NCP-DB-6.10 PDF questions file, desktop practice test software, and web-based practice test software. All these three Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 in NCP-DB-6.10 Exam Dumps formats contain the real Nutanix NCP-DB-6.10 exam questions that will help you to streamline the NCP-DB-6.10 exam preparation process.

Often candidates fail the NCP-DB-6.10 exam due to the fact that they do not know the tactics of attempting the Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) exam in an ideal way. The decisive part is often effective time management. Some Nutanix NCP-DB-6.10 Exam Questions demand more attention than others, which disturbs the time allotted to each topic. The best way to counter them is to use an updated NCP-DB-6.10 Dumps.

NCP-DB-6.10 Practice Test Training Materials - NCP-DB-6.10 Test Prep - FreeDumps

Our NCP-DB-6.10 study prep is classified as three versions up to now. All these versions of our NCP-DB-6.10 exam braindumps are popular and priced cheap with high quality and accuracy rate. They achieved academic maturity so that their quality far beyond other practice materials in the market with high effectiveness and more than 98 percent of former candidates who chose our NCP-DB-6.10 Practice Engine win the exam with their dream certificate.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q221-Q226):

NEW QUESTION # 221

What is the purpose of Data Access Management policies in NDB Multi-Cluster?

- A. To manage time machine data availability across all registered Nutanix clusters in NDB
- B. To register multiple Nutanix clusters in NDB
- C. To remove data accessibility of a time machine across all registered Nutanix clusters in NDB
- D. To perform snapshot operations on a single Nutanix cluster

Answer: A

Explanation:

Data Access Management (DAM) policies are a feature of NDB Multi-Cluster that allows you to control the access and availability of time machine data across different Nutanix clusters. You can use DAM policies to specify which clusters can access the time machine data of a source database, and which clusters can replicate the time machine data for backup or disaster recovery purposes. DAM policies help you to optimize the storage and network resources, as well as ensure the security and compliance of your database workloads. The purpose of DAM policies is not to register multiple Nutanix clusters in NDB, as this is done by using the Add Cluster option in the NDB settings page. The purpose of DAM policies is also not to perform snapshot operations on a single Nutanix cluster, as this is done by using the Time Machine feature in the NDB dashboard. The purpose of DAM policies is also not to remove data accessibility of a time machine across all registered Nutanix clusters in NDB, as this is done by using the Delete option in the Time Machine page.

NEW QUESTION # 222

What happens to the primary member in a MongoDB Server Cluster during the NDB patching process?

- A. It is patched first and then becomes a secondary member.
- B. It is skipped during the patching process to ensure no downtime.
- C. It becomes a read-only member during the patching process.
- D. It is patched last and is restored to its original state.

Answer: A

Explanation:

NDB identifies the primary member of the MongoDB Server Cluster and patches it first. NDB triggers a failover to elect a new primary member from the remaining secondary members. NDB patches the former primary member, which becomes a secondary member after the failover. NDB patches the remaining secondary members one by one. NDB verifies the patching status and the cluster health. This process ensures that the MongoDB Server Cluster always has a primary member available to handle write operations, while minimizing the downtime and the impact on the cluster performance.

NEW QUESTION # 223

Which statement about NDB's unified patching capability is correct?

- A. Patches can only be applied to newly deployed databases
- B. Patching is supported only for SQL Server on Windows
- C. Patches must be manually uploaded; automatic discovery is not supported
- D. The patching workflow automatically snapshots and allows rollback if needed

Answer: D

Explanation:

Before applying a patch, NDB creates a Time Machine snapshot, allowing rollback in case of patch failure.

NEW QUESTION # 224

Which ports must be open between the NDB server and Controller VMs to facilitate iSCSI connections?

- A. 3205 and 3260
- B. 5985 and 5986
- C. 80 and 443
- D. 22 and 9440

Answer: A

Explanation:

According to the Nutanix Database Automation (NCP-DB) course, the ports 3205 and 3260 are required for iSCSI connections between the NDB server and the Controller VMs. Port 3205 is used for the NDB iSCSI initiator service, which initiates the iSCSI sessions and sends SCSI commands to the Controller VMs. Port 3260 is used for the iSCSI target service, which listens for incoming iSCSI requests and provides access to the storage devices on the Controller VMs. The other options are not related to iSCSI connections. Port 22 is used for SSH, port 9440 is used for Prism Central, port 80 is used for HTTP, port 443 is used for HTTPS, port 5985 is used for WinRM HTTP, and port 5986 is used for WinRM HTTPS.

NEW QUESTION # 225

How can Era be configured to send alert notifications to email recipients?

- A. From Administration, select access control then add a user and setup email notification.
- B. From Administration, select Era Service then go to configure notification widget and then click update to update SMTP server configuration
- C. From Administration select access control, select SMTP and then click update to update SMTP server configuration.
- D. From Administration select Era Service then go to Era service name and setup email notification,

Answer: B

Explanation:

According to the Nutanix Database Automation (NCP-DB) learning documents, to configure Era to send alert notifications to email recipients, you need to go to the Administration section, select Era Service, then go to the configure notification widget. From there, you can update the SMTP server configuration. This allows Era to use the SMTP server to send alert notifications to the specified email recipients.

NEW QUESTION # 226
