Nokia Data Center Fabric Fundamentals Exam Sample Questions (Q11-Q16):

NEW QUESTION # 11

Which of the following Nokia's SR Linux ACLs is instantiated on all line cards to copy incoming packets to the CPM?

- A. Egress ACL
- B. Capture-filter ACL
- C. Ingress ACL
- D. CPM-filter ACL

Answer: D

Explanation:

The CPM-filter ACL is instantiated on all line cards in Nokia's SR Linux to copy incoming packets to the Control Plane Manager

(CPM) for processing.

NEW QUESTION # 12

Which of the following statements about resilient ECMP load balancing is TRUE?

- A. A different hash seed is used on downstream routers to ensure that flows are randomly distributed across all eligible router interfaces.
- B. The hash value used to distribute traffic is calculated as a modulo function on specific fields of the packet header.
- C. When one of the next-hops fail, only flows currently egressing to that next-hop are impacted.
- D. Hash buckets are used to ensure that flows egressing the same interface on one router use different egress interfaces on downstream routers.

Answer: C

Explanation:

In resilient ECMP load balancing, when a next-hop fails, only the flows that were using that specific next-hop are affected and need to be redistributed, minimizing disruption to other flows.

NEW QUESTION # 13

A static route is configured in two steps in Nokia's SR Linux. Which of the following items CANNOT be configured in the static-routes container?

- A. blackhole
- B. Preference value
- C. IPv4 destination prefix
- D. Next-hop group

Answer: A

Explanation:

The static-routes container in Nokia SR Linux does not support configuring a blackhole route directly; it is used to configure destination prefixes, preference values, and next-hop groups for static routing.

NEW QUESTION # 14

Which of the following statements about a CPM-filter policer is FALSE?

- A. Hierarchical policing of control plane traffic is supported.
- B. CPM-filter entries can use both a distributed-policer and a system-cpu-policer.
- C. The system-cpu-policer acts on the aggregate traffic from all line cards.
- D. The system-cpu-policer is hardware-based.

Answer: D

Explanation:

The system-cpu-policer in Nokia SR Linux is software-based, not hardware-based. It acts on aggregate control plane traffic and supports hierarchical policing with CPM-filter entries using both distributed and system-cpu-policers.

NEW QUESTION # 15

Which of the following statements about configuration checkpoints in Nokia SR Linux is FALSE?

- A. Checkpoint 0 is always the oldest checkpoint.
- B. The operator can revert to any existing checkpoint.
- C. The operator can generate a new checkpoint when committing configuration changes.
- D. The current running configuration can be saved as a JSON-formatted checkpoint file.

Answer: A

Explanation:

In Nokia SR Linux, checkpoint numbering is dynamic. The system assigns the lowest available number to the most recent checkpoint, not necessarily "0." When the number of saved checkpoints exceeds the configured maximum, the oldest checkpoint is removed, and the remaining checkpoints are renumbered accordingly. Therefore, checkpoint "0" is not always the oldest checkpoint.
