All C_ACDET_2506 exam questions are available at an affordable cost and fulfill all your training needs. PassLeaderVCE knows that applicants of the SAP C_ACDET_2506 examination are different from each other. Each candidate has different study styles and that's why we offer our SAP C_ACDET_2506 product in three formats. These formats are C_ACDET_2506 PDF, desktop practice test software, and web-based practice exam.

SAP C_ACDET_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.
Topic 2	<ul style="list-style-type: none">• Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.

Topic 3	<ul style="list-style-type: none"> • Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.

By Achieving the SAP C_ACDET_2506 You will Get the Job

Our braindumps for C_ACDET_2506 real exam are written to highest standard of technical profession, tested by our senior IT experts and certified trainers. You can totally trust our C_ACDET_2506 exam prep materials because we guarantee the best quality of our products. With our latest C_ACDET_2506 Training Materials, you will pass the certification exam in your first try. We hope you clear exam successfully with our products.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q37-Q42):

NEW QUESTION # 37

During verification in Production, a stakeholder reports that the imported form template appears outdated. What could be a likely reason for this?

- A. The Production site is missing certain parameter settings.
- **B. The Test site template was not the latest version when exported.**
- C. The system automatically reverted the template to a previous version during import.
- D. The Production site does not support custom form templates.

Answer: B

Explanation:

If an imported form template appears outdated in Production, the most common cause is that the version exported from Test was not the latest published version. SAP Ariba's export/import process is version-specific; only the selected version at export time is moved. If the latest updates weren't published or exported, Production will receive an older version.

SAP does not auto-revert templates to previous versions during import, and missing parameter settings typically do not affect template versions. Production supports custom templates as long as metadata and versions align.

Proper version control, including publishing the latest template version in Test before export, is essential to avoid this issue.

NEW QUESTION # 38

During which SAP Activate Methodology phase do you migrate the configuration to Production?

- A. Push
- **B. Deploy**
- C. Move
- D. Migrate

Answer: B

NEW QUESTION # 39

Which of the following applies in a Greenfield deployment scenario when migrating configurations from your test site?

- A. You can revert migrated configurations from the target site.
- **B. You cannot make other configuration updates in ICM when a migration operation is in progress.**
- **C. The status changes to Complete when migration is finished.**
- D. If any configuration type fails during the migration process, you cannot create a new migration request.

Answer: B,C

Explanation:

During Greenfield migrations using the Intelligent Configuration Manager (ICM), no other configuration updates can be made in ICM while a migration operation is active to ensure stability and consistency of the migration bundle. Additionally, once the migration finishes successfully, the status updates to "Complete", indicating the configuration is fully migrated and applied.

Contrary to option A, there is no built-in revert or rollback feature in ICM for deployed configurations; changes require new migration cycles. Option D is incorrect because if a migration fails, you can correct the issues and create a new migration request to retry. This process ensures controlled and orderly deployment of configurations.

NEW QUESTION # 40

In a Greenfield deployment scenario, how should translation migrations be performed for header field labels, help tips, and validity condition error messages?

- A. User with Partner Administrator can configure translation.
- B. Create a package to migrate translations by ICM.
- C. Translations are included in migrations and are listed as `AMLStringResource` in the migration UI.
- D. Contact an SAP Deployment lead for customization help.

Answer: C

Explanation:

In Greenfield deployments, translations for custom field labels, help tips, and validation/error messages are migrated as part of the configuration migration package and are represented in the migration UI as `AMLStringResource` entries. This structured approach ensures all language-specific content is consistently moved alongside configuration settings.

While administrators and deployment leads may support translation tasks, the migration of translation strings is managed automatically via this AML-based mechanism, not through manual reconfiguration or separate ICM packages.

This ensures a seamless multilingual user experience immediately upon go-live without requiring additional manual translation imports.

NEW QUESTION # 41

Which of the following languages is used to define defaults on fields within SAP Ariba?

- A. Ariba expression language
- B. JavaScript
- C. Python
- D. ABAP

Answer: A

Explanation:

SAP Ariba uses its proprietary Ariba expression language, based on OGNL (Object-Graph Navigation Language), to define default value expressions on fields. This language supports logical conditions, comparisons, and public Java method calls to create dynamic defaulting logic. ABAP, Python, and JavaScript are not supported languages for field default expressions in SAP Ariba. This expression language provides a concise and powerful way to tailor defaults based on context.

NEW QUESTION # 42

.....

Nowadays everyone is interested in the field of SAP because it is growing rapidly day by day. The C_ACDET_2506 credential is designed to validate the expertise of candidates. But most of the students are confused about the right preparation material for SAP C_ACDET_2506 Exam Dumps and they couldn't find real SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite (C_ACDET_2506) exam questions so that they can pass C_ACDET_2506 certification exam in a short time with good grades.
