## Salesforce New Mule-Dev-202 Test Test: Salesforce Certified MuleSoft Hyperautomation Developer - Test4Engine Provides you Best Valid Test Bootcamp

Are you aiming to ace the Salesforce Mule-Dev-202 exam on your first attempt? Look no further! Pass4Success provides updated Salesforce Certified MuleSoft Hyperautomation Developer (Mule-Dev-202) exam questions that will help you succeed. In today's competitive job market, obtaining the Salesforce Mule-Dev-202 Certification is essential for securing high-paying jobs and promotions. Don't waste your time and money studying outdated Mule-Dev-202 practice test material. Prepare with actual Mule-Dev-202 questions to save time and achieve success.

## Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q54-Q59):

### NEW QUESTION # 54

A Salesforce admin for AnyAirlines constructs a MuleSoft Composer flow that retrieves a record based on a unique ID using the Get Records action from a Salesforce connector. They will use the result to send a Slack message. How can they achieve this task?

- A. 1. Add a Slack action step after the Salesforce action step.2. Use the first record from the collection of Salesforce records to construct the message.
- B. 1. Add a For Each loop after the Salesforce action step iterating over the collection of Salesforce records.2. Use a Slack action step to construct the messages from the record being processed.
- C. 1. Add a Slack action step after the Salesforce action step.2. Use the record to construct the message.
- D. 1. Add an If/Else Block after the Salesforce action step, which contains a branch checking if the Salesforce action step

returned exactly one record.2. In the branch, add a Slack action step and use the record to construct the message.

**Answer: C**

Explanation:

Salesforce Action Step:Start by adding a Salesforce action step that uses the Get Records action to retrieve the record based on a unique ID. This action retrieves the specific record needed.

Reference:MuleSoft Composer Salesforce Connector

Add Slack Action Step:After retrieving the record, add a Slack action step. This step will be used to send the message to Slack.

Reference:MuleSoft Composer Slack Connector

Use the Record:Use the retrieved record directly to construct the message in the Slack action step. This ensures the message contains the relevant information from the Salesforce record.

Reference:Building Messages in Composer

No Need for Collection Handling:Since the Get Records action retrieves a single record based on a unique ID, there is no need to handle collections or iterate through records.

Reference:Get Records Action

### NEW QUESTION # 55

Northern Trail Outfitters needs to update multiple systems outside of Salesforce based on record updates within Salesforce. A hyperautomation practitioner needs to configure Salesforce to call several APIs created by the MuleSoft development team from within a Salesforce flow.

What specifications must be imported into Salesforce to make external services available to a Salesforce flow that enables external invocable actions?

- **A. Open API specifications**
- B. Anypoint API specifications
- C. External API specifications
- D. RAML API specifications

**Answer: A**

Explanation:

To enable Salesforce to call external services within a flow, the appropriate specifications must be imported to make these external services available as invocable actions. The correct specification is Open API specifications. OpenAPI Specification (formerly known as Swagger) is a standard for defining APIs which can be easily imported into Salesforce to facilitate the integration and invocation of external services.

Import OpenAPI Specifications: Salesforce allows the import of OpenAPI specifications, which define the available endpoints and operations of an API, making them accessible as invocable actions in a Salesforce flow.

Creating External Services: By importing an OpenAPI definition into Salesforce, it creates an External Service, which you can then use within Flow to interact with the defined APIs.

Flow Integration: Once imported, these services can be integrated into Salesforce Flows to automate processes that require interaction with external systems.

Salesforce External Services and API Integrations

### NEW QUESTION # 56

Which API policy can be applied to limit the number of requests an individual client can make to an API?

- A. Spike Control
- B. OAuth 2.0 access token enforcement
- C. Client ID Enforcement
- **D. Rate limiting - SLA-Based**

**Answer: D**

Explanation:

The Rate Limiting - SLA-Based policy in Anypoint Platform is designed to control the number of requests an individual client can make to an API. This policy is highly configurable and allows you to set specific limits based on service level agreements (SLAs).

Rate Limiting - SLA-Based:

This policy helps protect APIs from being overwhelmed by too many requests by enforcing a limit on the number of requests a client

can make within a specified time frame.

You can define different rate limits for different tiers of clients, ensuring fair usage and protecting backend services.

References:

Anypoint Platform Rate Limiting Documentation

### NEW QUESTION # 57

An RPA developer is building the implementation of an RPA process based on the BPMN created by a colleague. In the BPMN, they see the symbol below:

What does the symbol represent?

- A. A point in the process where different activities are performed under different circumstances
- B. One possible endpoint for the process
- C. An activity that is performed if an error occurs during processing
- D. A cleanup activity that is performed at the end of the process to ensure all running applications are closed

**Answer: A**

Explanation:

Symbol Meaning: The symbol shown is a diamond with an "X" inside, which represents an exclusive gateway in BPMN (Business Process Model and Notation). This gateway is used to control the flow of the process based on certain conditions or circumstances.

Reference: BPMN Gateway Types

Exclusive Gateway: An exclusive gateway routes the process flow into one of several paths based on conditions defined within the process model. Only one path is taken out of the gateway.

Reference: Exclusive Gateway Explanation

Usage in Process: When an exclusive gateway is encountered, the process evaluates the conditions on each outgoing sequence flow and chooses the path that meets the conditions. This ensures different activities are performed based on different circumstances.

Reference: BPMN Exclusive Gateway

### NEW QUESTION # 58

Northern Trail Outfitters needs to develop an application network that follows a MuleSoft-recommended, API-led connectivity approach and meets the following requirements:

provides data to mobile and web interfaces

aggregates and transforms data

retrieves data from databases

In which API tier should the data aggregation and transformation take place?

- A. Experience
- B. Process
- C. System
- D. Business

**Answer: B**

Explanation:

API-led Connectivity: MuleSoft's API-led connectivity approach divides APIs into three tiers: System, Process, and Experience. Each tier has a specific role in managing data and operations.

Reference: MuleSoft API-led Connectivity

Experience APIs: These APIs are designed to provide data to end-user interfaces, such as mobile and web applications. They typically format the data in a way that is easy for the user interface to consume.

Reference: Experience API Definition

Process APIs: Process APIs are responsible for orchestrating and executing business logic. They aggregate, transform, and process data from multiple sources before passing it to Experience APIs or other downstream systems.

Reference: Process API Role

System APIs: These APIs provide direct access to core systems and data sources. They handle CRUD (Create, Read, Update, Delete) operations and expose data from underlying systems.

Reference: System API Role

Data Aggregation and Transformation: Given the requirements to aggregate and transform data, the Process tier is the appropriate place. Process APIs handle complex business logic and data transformation, making them ideal for aggregating data from multiple sources and transforming it as needed.

Reference: Process APIs and Data Transformation

## NEW QUESTION # 59

.....

All questions on our Mule-Dev-202 exam questions are strictly in accordance with the knowledge points on newest test syllabus. Also, our experts are capable of predicating the difficult knowledge parts of the Mule-Dev-202 exam according to the test syllabus. We have tried our best to simply the difficult questions of our Mule-Dev-202 Practice Engine to be understood by the customers all over the world. No matter the students, office staffs, even someone who know nothing about this subject can totally study it without difficulty.
