Are you still distressed that you are young learner of HPE7-A03 exam prep? From now on, DumpsReview will solve all your worries about the HPE7-A03 test. The textbooks of HPE7-A03 test questions contain different perspective materials. Even if you are young learners, you can master HPE7-A03 Test Questions easily. Having it, you will have the key to pass HPE7-A03 exam and will have unprecedented confidence. So what are you waiting for?

HP HPE7-A03 Exam Syllabus Topics:

| Topic | Details |
|---------|--|
| Topic 1 | <ul style="list-style-type: none">Discover Requirements: This topic defines the goals and identifies the current environment and the objectives. Lastly, it also focuses on collecting information. |
| Topic 2 | <ul style="list-style-type: none">Architect the Solution: It measures your knowledge about identifying the solution options, designing high-level topologies, selecting the correct products, and determining the suitable overlay and underlay design. Additionally, the topic discusses how to verify that the design meets the original requirements. |

| | |
|---------|--|
| Topic 3 | <ul style="list-style-type: none"> • Analyze Requirements: It focuses on determining possible high-level solutions. The topic also discusses mapping the needs into technical solutions and evaluating the proposed solution against project objectives and dependencies. Moreover, it also focuses on documenting assumptions. |
| Topic 4 | <ul style="list-style-type: none"> • Propose the Solution: The focal point of this topic is creating the design documentation and the final design. Moreover, the topic also focuses on presenting the solution. |

First-hand HP HPE7-A03 Free Exam Questions - HPE7-A03 Download Aruba Certified Campus Access Architect Exam Fee

The information technology market has become very competitive. HP HPE7-A03 technologies and services are constantly evolving. Therefore, the HP HPE7-A03 certification has become very important to advance one's career. Success in the Aruba Certified Campus Access Architect Exam HPE7-A03 exam validates and upgrades your skills in HP HPE7-A03 technologies. It is the main reason behind the popularity of the HP HPE7-A03 certification exam. You must put all your efforts to clear the challenging HP HPE7-A03 examination. However, cracking the HPE7-A03 test is not an easy task.

HP Aruba Certified Campus Access Architect Exam Sample Questions (Q21-Q26):

NEW QUESTION # 21

A global furniture retail company called 'No-Stair Inc.' requests you design their new WLAN infrastructure for a global footprint. Each location of 'No-Stair Inc.' has a similar layout: three small manager offices, a warehouse, and a 'retail' area. The 'retail' area and the warehouse together amount to 95% of the location. The IT department of the company is minimally engaged in their LAN refresh so the CTO of the company has shared the information below.

Current WLAN Infrastructure is based on the 802.11n "WiFi4Less" access-points series (both model 2013-INT (2.4 only internal antenna) and model 2019-EXT (dual-band external antenna only). These AP models are standalone without any centralized management. Last year 'No-Stair Inc.' ran a project called 'secure-it' ensuring that all needed network security was implemented to be fully compliant with their security standards. During this project, they also upgraded the AAA.

Infrastructure to handle the increased AAA requests. No additional Wi-Fi or security requirements are listed for this WLAN refresh, which means that 'No-Stair Inc.' will continue to use bridged SSIDs, with local breakout into different VLANs.

The CTO of 'No-Stair Inc.' understands the need for you to ask additional questions to deliver the design. The questions may be sent in written form and will be answered within two weeks.

Which additional question is correct in order to collect needed information for the WLAN design?

- A. Is there enough cooling In the MDF?
- B. What type of fiber connection Is used between the core and access layer switches?
- C. Who is the campus switch vendor?
- D. Is there a current RF survey report that you can share?

Answer: D

Explanation:

An RF (Radio Frequency) survey report is crucial for WLAN design as it provides detailed information about the current wireless environment, including signal strengths, interference sources, coverage gaps, and the effectiveness of the existing WLAN infrastructure. For a company like 'No-Stair Inc.' that is planning to refresh its WLAN across a global footprint, understanding the current RF conditions in each location is essential. This information helps in designing a WLAN infrastructure that can meet the specific needs of different areas within the locations, such as the retail area and warehouse, ensuring optimal coverage, performance, and user experience. An RF survey report would allow the designer to make informed decisions regarding the placement of new access points, the selection of appropriate antennas, and the configuration of WLAN parameters to improve coverage and capacity while minimizing interference.

NEW QUESTION # 22

identify the stakeholders when gathering information for the network design and new IDF/MDF design.

(Select two.)

- A. Chief Financial Officer
- B. Network Operations manager
- C. Facility manager
- D. Help desk manager

Answer: B,C

NEW QUESTION # 23

A large multinational financial institution has contracted you to design a new full-stack wired and wireless network for their new 6-story regional office building. The bottom two floors of this facility will be retail space for a large banking branch. The upper floors will be carpeted office space for corporate users, each floor being approximately 100,000 sq ft (9290 sq m). Data centers are all offsite and will be out of scope for this project. The customer is underserved by its existing L2- based network infrastructure and would like to take advantage of modern best practices in the new design. The network should be fully resilient and fault-tolerant, with dynamic segmentation at the edge.

The retail space will include public guest Wi-Fi access. Retail associates will have corporate tablets for customer service, and there will be a mix of wired and wireless devices throughout the retail floors. The corporate users will primarily use wireless for connectivity, but several wired clients, printers, and hard VoIP phones will be in use.

The customer is also planning on renovating the corporate office space in order to take advantage of 'smart office' technology. These improvements will drive blue-dot wayfinding, presence analytics, and other location-based services.

The client would like to ensure full wireless coverage in its 40 m x 40 m (130 ft x 130 ft) auditorium during company functions while maintaining the fewest APs for aesthetic purposes.

Wi-Fi6 APs are a minimum requirement.

Which AP series would you use in the auditorium's 1,000 seats with a maximum take rate of 80%?

- A. AP515
- B. AP555
- C. AP577
- D. AP635

Answer: D

Explanation:

The Aruba AP-635 is a Wi-Fi 6 (802.11ax) access point, designed for high-density environments such as auditoriums. It is capable of providing high throughput and efficient airtime fairness to a large number of clients, which makes it suitable for an auditorium setting with 1,000 seats and a high take rate. The AP-635's advanced capabilities, including OFDMA and MU-MIMO, allow it to handle multiple simultaneous connections efficiently, ensuring robust wireless coverage and performance during company functions, all while keeping the number of APs to a minimum to satisfy aesthetic concerns.

NEW QUESTION # 24

ACME Retail has 38 locations spread out across five US states and two provinces in Canada. They are looking to grow 20% over the next two years. They have a head office (HO) with a staff of 200 employees.

The organization has eight regional managers and two VPs who work from home and on the road. Stores typically have 17 employees on average per location.

The two warehouses have a remote loading system and 20 employees each to load the trucks and fulfill the online orders. The warehouse has 40-foot ceilings and large metal racks to store inventory. The main warehouse is 240,000 sq ft (#22,300 sqm), and the Canadian warehouse is 130,000 sq ft (#12,100 sqm).

Forklifts on the loading docks are equipped with wireless tablets onboard.

A typical store is about 60,000 sq ft (#5,575 sqm), and smaller stores are planned at 25,000 sq ft (#2,320 sqm). The locations need to expand wireless access to vendors who set up displays or interactive kiosks.

The current infrastructure was installed in 2015 using wireless N technology in a coverage model. Wiring is Cat5, and fiber connections are uncertain. Inventory is placed directly on the floor when delivered.

Inventory control is handled through Zebra barcode scanners, but poor coverage and signal issues have made monthly inventory counts difficult.

The organization has a small help desk for store support and PC support for the office. The company plans to move away from the current PBX system later this year. They want to cut costs, move services to the cloud, and achieve real-time inventory control for online order fulfillment.

The network has been wired over the last 10 years, but new systems are trending wireless. They want to provide wireless access for employees, guests, vendors, and contractors. The new IT director will start next week, and the CTO has prioritized this project.

Additional context:

- * Marketing wants to interact with customers and collect more data.
- * The IT support desk needs to reduce staff by half.
- * The HO has an MDF and two IDF's (floors 1 and 2).
- * WAN circuits exist for HO.
- * Each store has a local Ethernet handoff from the cable provider in the office.
- * Budget is a concern, but the solution must last 7+ years.

Based on best practices and customer requirements, what is the correct WLAN approach?

- **A. ArubaOS 10 AP and Gateway deployment**
- B. ArubaOS 8 Campus deployment
- C. InstantOS 8 deployment
- D. ArubaOS 10 AP-only deployment

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

- * Why ArubaOS 10 (AOS10):
- * ArubaOS 10 is the current next-generation WLAN architecture, designed for both campus and distributed branch deployments.
- * It supports cloud-native management via Aruba Central, aligning with ACME's move to the cloud.
- * Provides scalability for 7+ years, meeting the long-term investment requirement.
- * Supports Wi-Fi 6/6E APs, which are essential for high-density retail and warehouse environments.
- * Why Gateways are Needed:
- * Gateway role is critical to support:
- * Tunneled traffic for segmentation (guest, vendor, employee).
- * Cloud Guest Authentication and captive portal functions for customers.
- * Application visibility and role-based policy enforcement.
- * Integration with SD-Branch WAN for resilience and cost control across remote stores.
- * Gateways ensure the unified policy enforcement across all sites (head office, branches, warehouses, retail stores).
- * Why Not the Other Options:
- * B (InstantOS 8): Outdated architecture, limited to smaller standalone AP deployments, not recommended for enterprise growth or cloud-centric operations.
- * C (AP-only AOS10): Provides Wi-Fi but lacks gateways, meaning no central policy enforcement, tunneling, or role-based segmentation. This would not meet ACME's requirements for guest/vendor access control, WAN resiliency, and security.
- * D (ArubaOS 8 campus): Legacy controller-based solution, being phased out in favor of AOS10.

Does not align with cloud-first and future-ready requirements.

- * Requirement Mapping to AOS10 AP + Gateway deployment:
- * Real-time inventory & Zebra scanners # Reliable Wi-Fi 6E AP coverage with low latency.
- * Cloud-based operations # Aruba Central + AOS10 integration.
- * Guest, vendor, employee segmentation # Policy enforcement firewall and dynamic segmentation via gateway tunneling.
- * Warehouses with high ceilings # Wi-Fi 6E APs with appropriate antenna design (AOS10 supports full AP portfolio).
- * Cut IT staff in half # AI Insights and automation in Aruba Central reduce troubleshooting complexity.
- * Marketing customer interaction # Cloud guest services and analytics integration with Aruba Central.
- * 7+ year lifecycle # AOS10 architecture is future-proof and actively developed, unlike legacy OS8.

Final Justification:

The only solution that meets all customer requirements (cloud-based management, role-based segmentation, tunneling, guest/vendor access, real-time inventory, scalability, and 7+ years longevity) is an ArubaOS 10 AP and Gateway deployment.

NEW QUESTION # 25

You hired a junior engineer to assist you with a large-scale network infrastructure project. The engineer has never worked on such a complex project before and wants to better understand the role that each stakeholder will play in the project. What is the role of Network Operations in this project?

- A. responsible for Investigating IDS/IPS Incidents and managing firewalls
- B. responsible for establishing security policy and selecting security controls for the infrastructure
- **C. responsible for supporting, troubleshooting, and monitoring the wired/wireless infrastructure**
- D. responsible for authoring the low-level design and creating the configuration to meet the technical requirements

Answer: C

Explanation:

Network Operations is responsible for the ongoing support, monitoring, and troubleshooting of the wired and wireless infrastructure, ensuring continuous stability and performance during and after deployment.

NEW QUESTION # 26

.....

HP certification will be a qualification assess standard for experienced workers, it is also a breakthrough for some workers who are in bottleneck. HPE7-A03 new test camp materials are a good helper. For most IT workers it also increases career chances. For companies one certification increases strong competitive power. HPE7-A03 New Test Camp materials will make you stand out from peers in this field applicable in all over the world.
