Many users report to us that they are very fond of writing their own notes while they are learning. This will enhance their memory and make it easier to review. Our AZ-500 exam questions have created a PDF version of the AZ-500 practice material to meet the needs of this group of users. You can print the PDF version of the AZ-500 learning guide so that you can carry it with you. As long as you have time, you can take it out to read and write your own experience.

Microsoft AZ-500 (Microsoft Azure Security Technologies) Certification Exam is a highly sought after certification exam that validates the skills and knowledge required to implement security controls, secure data, manage identity and access, and protect against security threats in Microsoft Azure. Microsoft Azure Security Technologies certification exam is aimed at security professionals who are responsible for implementing security controls, maintaining security posture, and managing security incidents in Microsoft Azure.

Microsoft AZ-500 Certification Exam is an excellent opportunity for IT professionals to showcase their expertise in Azure security technologies. It is a must-have certification for those who want to advance their careers in cloud security and stay ahead of the curve in the ever-evolving cybersecurity landscape. With the growing demand for cloud security professionals, obtaining this certification can help you stand out in the job market and open up new opportunities for career growth.

Pdf AZ-500 Torrent | AZ-500 Valid Braindumps Book

AZ-500 practice questions and pass it with confidence. As far as the top features of AZ-500 exam dumps are concerned, these Microsoft AZ-500 latest questions are real and verified by Microsoft AZ-500 certification exam experts. With the Microsoft AZ-500 Practice Test questions you will get everything that you need to learn, prepare and get success in the final Microsoft Azure Security Technologies certification exam.

The AZ-500 Exam measures the candidate's ability to implement security controls and threat protection, manage identity and access, secure data and applications, and manage security operations in Microsoft Azure. AZ-500 exam is intended for professionals, including security engineers, security analysts, system administrators, and network administrators, who work with Microsoft Azure on a regular basis. Microsoft Azure Security Technologies certification validates the candidate's ability to design, implement, and

manage security solutions in Microsoft Azure and demonstrates their expertise in securing cloud services.

Microsoft Azure Security Technologies Sample Questions (Q494-Q499):

NEW QUESTION # 494

You plan to use Azure Resource Manager templates to perform multiple deployments of identically configured Azure virtual machines. The password for the administrator account of each deployment is stored as a secret in different Azure key vaults. You need to identify a method to dynamically construct a resource ID that will designate the key vault containing the appropriate secret during each deployment. The name of the key vault and the name of the secret will be provided as inline parameters. What should you use to construct the resource ID?

- A. a linked template
- B. an automation account
- C. a key vault access policy
- **D. a parameters file**

Answer: D

Explanation:

You reference the key vault in the parameter file, not the template. The following image shows how the parameter file references the secret and passes that value to the template.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-resource-manager/resource-manager-keyvault-parameter> Implement platform protection Testlet 1 This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other question on this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next sections of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question on this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Overview

Litware, Inc. is a digital media company that has 500 employees in the Chicago area and 20 employees in the San Francisco area.

Existing Environment

Litware has an Azure subscription named Sub1 that has a subscription ID of 43894a43-17c2-4a39-8cfc-3540c2653ef4.

Sub1 is associated to an Azure Active Directory (Azure AD) tenant named litwareinc.com. The tenant contains the user objects and the device objects of all the Litware employees and their devices. Each user is assigned an Azure AD Premium P2 license. Azure AD Privileged Identity Management (PIM) is activated.

The tenant contains the groups shown in the following table.

The Azure subscription contains the objects shown in the following table.

Identity and Access Requirements

Azure Security Center is set to the Free tier.

Planned changes

Litware plans to deploy the Azure resources shown in the following table.

Litware identifies the following identity and access requirements:

- * All San Francisco users and their devices must be members of Group1.
- * The members of Group2 must be assigned the Contributor role to Resource Group2 by using a permanent eligible assignment.
- * Users must be prevented from registering applications in Azure AD and from consenting to applications that access company information on the users' behalf.

Platform Protection Requirements

Litware identifies the following platform protection requirements:

- * Microsoft Antimalware must be installed on the virtual machines in Resource Group1.
- * The members of Group2 must be assigned the Azure Kubernetes Service Cluster Admin Role.

- * Azure AD users must be able to authenticate to AKS1 by using their Azure AD credentials.
- * Following the implementation of the planned changes, the IT team must be able to connect to VM0 by using JIT VM access.
- * A new custom RBAC role named Role1 must be used to delegate the administration of the managed disks in Resource Group1. Role1 must be available only for Resource Group1.

Security Operations Requirements

Litware must be able to customize the operating system security configurations in Azure Security Center.

Data and Application Requirements

Litware identifies the following data and applications requirements:

- * The users in Group2 must be able to authenticate to SQLDB1 by using their Azure AD credentials.
- * WebApp1 must enforce mutual authentication.

General Requirements

Litware identifies the following general requirements:

- * Whenever possible, administrative effort must be minimized.
- * Whenever possible, use of automation must be minimized.

NEW QUESTION # 495

You have Azure virtual machines that have Update Management enabled. The virtual machines are configured as shown in the following table.

- You schedule two update deployments named Update1 and Update2. Update1 updates VM3. Update2 updates VM6.

Which additional virtual machines can be updated by using Update1 and Update2? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

□

Answer:

Explanation:

□ Reference:

<https://docs.microsoft.com/en-us/azure/automation/automation-update-management>

NEW QUESTION # 496

You have an Azure Active Directory (Azure AD) tenant that contains a user named Admin1. Admin1 is assigned the Application developer role.

You purchase a cloud app named App1 and register App1 in Azure AD.

Admin1 reports that the option to enable token encryption for App1 is unavailable.

You need to ensure that Admin1 can enable token encryption for App1 in the Azure portal.

What should you do?

- A. Add App1 as an enterprise application.
- B. Assign Admin1 the Cloud application administrator role.
- C. Modify the API permissions of App1.
- D. Upload a certificate for App1.

Answer: A

Explanation:

Explanation

This is a tricky one because uploading a certificate is also required. However, the question states that the Token Encryption option is unavailable. This is because the app is not added as an enterprise application.

When the app is added as an enterprise application, the Token Encryption option will be available. Then you can upload the certificate.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/howto-saml-token-encryption>

NEW QUESTION # 497

You have an Azure AD Tenant and an application named App1.

You need to ensure that App1 can use Microsoft Entra Verified ID to verify credentials.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

- 1 - Create an Azure key vault.
- 2 - Configure the Verified ID service.
- 3 - Register App1 in Azure AD and grant permissions.

NEW QUESTION # 498

You plan to deploy Azure container instances.

You have a containerized application that validates credit cards. The application is comprised of two containers: an application container and a validation container.

The application container is monitored by the validation container. The validation container performs security checks by making requests to the application container and waiting for responses after every transaction.

You need to ensure that the application container and the validation container are scheduled to be deployed together. The containers must communicate to each other only on ports that are not externally exposed.

What should you include in the deployment?

- A. network security groups (NSGs)
- B. management groups
- **C. container groups**
- D. application security groups

Answer: C

Explanation:

Section: [none]

Explanation:

Azure Container Instances supports the deployment of multiple containers onto a single host using a container group. A container group is useful when building an application sidecar for logging, monitoring, or any other configuration where a service needs a second attached process.

Reference:

<https://docs.microsoft.com/en-us/azure/container-instances/container-instances-container-groups>
