問題 #103

You have defined two expenditure types but they are not available for selection when you enter an expenditure batch. What is the reason for this problem?

- A. The two expenditure types are not assigned to the reference data set that is assigned to the business unit in which the transaction is performed.
- B. The two expenditure types are not assigned to the reference data set that is assigned to the project expenditure organization in which the transaction is performed.
- C. The two expenditure types are not assigned to the reference data set that is assigned to the project- owning organization in which the transaction is performed.
- **D. The two expenditure types are not assigned to the reference data set that is assigned to the project unit in which the transaction is performed.**

答案： D

解題說明：

The reason for this problem is that the two expenditure types are not assigned to the reference data set that is assigned to the project unit in which the transaction is performed. Expenditure types are a type of reference data that can be shared across different business units or organizations using reference data sets. To make an expenditure type available for selection when you enter an expenditure batch, you need to assign it to the reference data set that is assigned to the project unit of the transaction. The project unit determines the reference data set for expenditure types. The reference data sets that are assigned to the project expenditure organization, the business unit, or the project-owning organization do not determine the reference data set for expenditure types. These reference data sets may determine other types of reference data such as expenditure categories, expenditure item dates, etc. Reference: <https://docs.oracle.com/en/cloud/saas/project-portfolio-management/20c/oapfm/manage-project-costs.html#OAPFM2356231>

問題 #104

Which setup option is common to both financial and project plan types?

- A. Enable the entry of plan amounts in currencies other than the project currency.
- B. Identify whether the plan type is the default selection when you create budget or forecast versions.
- C. Manage the options for creating control budgets in Oracle Fusion Budgetary Control.
- D. Enable the use of a workflow for managing budget or forecasting status changes.

答案： A

解題說明：

Ref: <https://docs.oracle.com/en/cloud/saas/project-portfolio-management/19b/oapfm/project-control-configuration-manage-financial-and-project-plan-types.htm#OAPFM75315> Financial and Project Plan Setup Options The following table describes the basic budget, forecast, or project plan setup options that determine how a plan type is used in the context of a project. Except for third-party scheduling, you can't edit these options at the project level.

Option

Location

Description

Planning amounts

Financial plan type

Indicates that the financial plan type supports the creation of versions with the following amounts:

* Cost amounts

* Revenue amounts

* Both cost and revenue amounts

* Either cost or revenue amounts

Approved budget or primary forecast

Financial plan type

Determines whether a financial plan type is used for creating approved budget versions or primary forecast versions that are used for plan comparison or project performance reporting.

Default financial plan type

Financial plan type

Determines whether the financial plan type is the default selection when you create budget or forecast versions.

Workflows

Financial plan type

Enables the use of a workflow for managing budget or forecast status changes.

Third-party scheduling software

Project plan type

Indicates whether project planning is performed in Microsoft Project.

If third-party scheduling is disabled in the project plan type, you can use the associated project or project template to create a project in Microsoft Project. However, you can't export the new project or link it to one created in Oracle Fusion Project Portfolio Management.

Multiple transaction currencies

Financial and project plan type

Enables entry of plan amounts in currencies other than the project currency.

Budgetary control settings

Financial plan type

Manages options for creating control budgets in Oracle Fusion Budgetary Control.

問題 #105

Your customer wants to perform billing based on the Percent Spent invoice method. Identify two setups that are required in project contracts for calculating invoice amounts as per their requirement. (Choose two.)

- A. bill plan
- B. billing controls
- C. expenditure items
- D. invoice method
- E. billing events

答案： A,B

解題說明：

Ref: <https://docs.oracle.com/en/cloud/saas/project-portfolio-management/19b/oapjb/create-customer-contract.htm#OAPJB70183>

Bill Plan - Create a bill plan within a contract that uses the invoice method you require. Assign the bill plan to one or more contract lines. A set of instructions on a contract that define how to invoice a customer.

Multiple contract lines on a contract can use the same or different bill plans. Invoice Method is used in creating Bill Plan - not a separate setup.

Billing Controls - Contract feature that controls the types of transactions, dates, and amounts a customer may be invoiced for and revenue can be recognized for a contract or contract line. Define billing controls at the contract or contract line level.

Topic - Creating a Contract for Percent Spent Invoice and Revenue Methods: Worked Example This example describes a scenario where transactions for a contract line need to be invoiced and the revenue recognized using the percent spent method.

What are the revenue and invoice method classifications? Percent Spent

What is the billing extension calculation level for the contract line and project association? Project level Summary of the Tasks Create a contract, create the percent spent contract lines, create the bill plan, create the revenue plan.

Prerequisites

- * Create a project.

- * Create the project plan for percent spent revenue. Specify the plan type on the percent spent billing extension.

- * Create an approved cost budget.

- * Create cost and burden rates.

- * Enter labor and expense transactions for the project.

- * Collect costs for the transactions.

Configuration Steps

- * Creating the Contract

- * Creating the Percent Spent Contract Lines

- * Creating the Bill Plan - A set of instructions on a contract that define how to invoice a customer.

Multiple contract lines on a contract can use the same or different bill plans.

- * Creating the Revenue Plan - Common set of instructions for recognizing revenue within a contract.

Multiple contract lines on a contract can use the same or different revenue plans.

Invoice method classifications determine how transactions are invoiced. The invoice method determines how invoice amounts are derived.

- * Enter an invoice method on a bill plan, which you create for a contract and assign to contract lines to provide a set of instructions for creating an invoice.

- * Create billing controls for a contract or contract line to define the valid transaction dates, billing resources, and amount limits for transactions associated with the contract.

- * Generate invoices to calculate the invoice amounts for a contract.

The following figure illustrates the components of a project and a contract that determine invoice amounts, and the relationships between the components.

Project and contract components used to determine invoice amounts and generate invoices.
