200-901 Valid Exam Book | 200-901 Accurate Prep Material

Many candidates find the Cisco 200-901 exam preparation difficult. They often buy expensive study courses to start their DevNet Associate Exam 200-901 certification exam preparation. However, spending a huge amount on such resources is difficult for many DevNet Associate Exam 200-901 Exam applicants.

Cisco DevNet Associate Exam Sample Questions (Q363-Q368):

NEW QUESTION # 363

Refer to the exhibit. A developer created a Python script by using the Cisco Meraki API. The solution must:

- Obtain a list of HTTP servers for a network named "net1".
- Print the response body if the HTTP status code is 200.
- Handle the timeout requests as exceptions, and print Timeout Error next to the exception to stdout.

Which block of code completes the script?

□

- A. □
- B. □
- C. □
- D. □

Answer: D

NEW QUESTION # 364

What is a procedural component of CI/CD pipelines?

- A. Every test must pass for the pipeline to continue its execution.
- B. Some tests fail without stopping the pipeline execution.
- C. The release label that identifies the build is optional.
- D. Bundled artifacts must be generated.

Answer: A

Explanation:

In a CI/CD (Continuous Integration/Continuous Deployment) pipeline, it is a common procedural component that every test must pass for the pipeline to continue its execution. This ensures that only code that meets the quality standards and passes all tests is deployed, thereby reducing the risk of introducing bugs or issues into the production environment.

NEW QUESTION # 366

Refer to the exhibit. A network engineer makes a RESTCONF API call to Cisco IOS XE to retrieve information. Which HTTP method and URL does the engineer use to make the ..call?

- A. ☐
- B. ☒
- C. ☐
- D. ☐

Answer: B

Explanation:

The provided JSON configuration includes information about a GigabitEthernet interface with the name "2".

To retrieve information about this specific interface using a RESTCONF API call, the correct HTTP method and URL must be used.

* HTTP Method: The GET method is used to retrieve information from the server.

* Correct URL: The URL must specify the path to the particular interface. The correct URL structure includes the native and interface resources, followed by the interface type (GigabitEthernet) and its specific name ("2").

The correct RESTCONF API call to retrieve the information would be:

GET <https://devnetlab.local/restconf/api/running/native/interface/GigabitEthernet/2/> This URL correctly targets the specific GigabitEthernet interface named "2" in the running configuration.

NEW QUESTION # 367

A Company is looking for cloud deployment which will use the on-premise infrastructure, is user self-service, and easy to scale. Which cloud solution should be selected for these requirements?

- A. multi

- B. public
- **C. hybrid**
- D. private

Answer: C

Explanation:

A hybrid cloud solution is best suited for a company that wants to use on-premise infrastructure while also leveraging user self-service and scalability features of the cloud.

* Hybrid Cloud:

* Definition: A hybrid cloud combines on-premise infrastructure (private cloud) with public cloud services, allowing data and applications to be shared between them.

* Scalability: Hybrid cloud allows for the flexibility to scale resources up or down as needed. When demand exceeds the capacity of the on-premise infrastructure, additional resources from the public cloud can be utilized.

* Self-Service: Users can provision and manage resources without IT intervention, typically through a self-service portal.

* Use Cases: This is ideal for businesses that need to maintain control over certain data and applications while taking advantage of the scalability and cost-efficiency of the public cloud.

* Other Cloud Types:

* Public Cloud: Fully managed by third-party providers and shared among multiple organizations.

It offers high scalability but may have concerns about data privacy and control.

* Private Cloud: Exclusively used by one organization, providing more control and security but may be limited in scalability compared to public cloud.

* Multi-Cloud: Use of multiple cloud services from different providers, which can be complex to manage but provides flexibility and redundancy.
