There is almost no innovative and exam-oriented format that can be compared with the precision and relevance of the actual HCIA-Cloud Computing V5.5 exam questions, you get with RealVCE brain dumps PDF. As per the format of the H13-511\_V5.5 Exam, our experts have consciously created a questions and answers pattern. It saves your time by providing you direct and precise information that will help you cover the syllabus contents within no time.

Another great way to pass the H13-511\_V5.5 exam in the first attempt is by doing a selective study with valid H13-511\_V5.5 braindumps. If you already have a job and you are searching for the best way to improve your current H13-511\_V5.5 test situation, then you should consider the H13-511\_V5.5 Exam Dumps. By using our updated H13-511\_V5.5 products, you will be able to get reliable and relative H13-511\_V5.5 exam prep questions, so you can pass the exam easily. You can get one-year free HCIA-Cloud Computing V5.5 exam updates from the date of purchase.

## **Huawei H13-511\_V5.5 Valid Braindumps & Exam H13-511\_V5.5 Blueprint**

Our HCIA-Cloud Computing V5.5 exam question has been widely praised by all of our customers in many countries and our company has become the leader in this field. Our product boost varied functions and they include the self-learning and the self-assessment functions, the timing function and the function to stimulate the exam to make you learn efficiently and easily. Thus you could decide whether it is worthy to buy our product or not after you understand the features of details of our product carefully on the pages of our H13-511\_V5.5 Study Tool on the website.

### **Huawei HCIA-Cloud Computing V5.5 Sample Questions (Q78-Q83):**

#### **NEW QUESTION # 78**

Which of the following cannot be managed by the libvirtd tool?

- A. Xen
- B. Hyper-v
- C. KVM
- D. openstack

**Answer: D**

#### **NEW QUESTION # 79**

In the following description about the installation of FusionAccess management components, what are the correct options? (Multiple choice)

- A. Ensure that the virtualization platform has available resources before installation
- B. Network configuration is not required
- C. When the service plane and the management plane are deployed together, for performance reasons, it is recommended to create a distributed switch separately to carry the traffic of the two planes
- D. The management component is installed on the Linux virtual machine created by the virtualization platform

**Answer: A,C,D**

#### **NEW QUESTION # 80**

Which of the following descriptions about the characteristics of load balancing is wrong?

- A. High-performance load balancing technology distributes business to multiple devices in a more balanced manner, improving the performance of the entire system
- B. Transparency: For users, a cluster is equivalent to a device or link with high reliability and good performance. They cannot perceive and do not need to care about the specific network structure.  
*Reducing devices or links will affect normal business*
- C. Manageability: A lot of management work is concentrated on the equipment that should bear a relatively balanced technology: the equipment group or link group only needs regular configuration and maintenance
- D. Reliability. The failure of multiple devices or links will not cause service interruption, which improves the reliability of the entire system

**Answer: B**

#### **NEW QUESTION # 81**

When deploying vLB components, vAG and vLB components are usually deployed on the same virtual machine, but vLB cannot be combined with WT components.

- A. False
- B. True

**Answer: B**

#### **NEW QUESTION # 82**

Which of the following statements is false about the Libvirt component?

- A. Libvirt provides programming interfaces in multiple languages. You can directly invoke APIs provided by Libvirt to perform operations on VMs.
- B. Both KVM and Xen can invoke APIs provided by Libvirt to manage virtualization platforms.
- C. Libvirt is a set of library functions that are invoked by other technologies to manage VMs on servers.
- D. Libvirt is a closed-source project. It is a very powerful management tool.

**Answer: D**

Explanation:

According to the Huawei HCIA-Cloud Computing curriculum regarding Open Source Virtualization, statement D is FALSE. Libvirt is famously an open-source toolkit and API, licensed under the LGPL. It was specifically designed to provide a stable, long-term abstraction layer for managing different virtualization technologies. It is not a proprietary or "closed-source" product. In fact, its open nature is what allowed it to become the industry standard for managing Linux-based hypervisors.

The other statements accurately describe Libvirt's role in a cloud environment. As noted in statement A, Libvirt is "hypervisor-agnostic," meaning it can manage multiple types of virtualization, including KVM, Xen, QEMU, and even LXC containers. This allows management tools to use a single set of commands regardless of the underlying technology. Statement B is correct because Libvirt provides bindings for numerous programming languages, such as Python, C, and Java, enabling developers to automate VM lifecycle management (start, stop, migrate, snapshot) directly through code. Statement C is also true; Libvirt is essentially a collection of library functions and a daemon (libvirtd) that higher-level management platforms, such as Huawei's FusionCompute or the open-source OpenStack, invoke to communicate with the hardware.

In Huawei's virtualization architecture, Libvirt acts as a crucial middle layer. By using the virsh command-line tool (which is part of the Libvirt package), administrators can perform complex VM operations without needing to understand the specific, low-level command syntax of each different hypervisor. Understanding that Libvirt is open-source and provides this universal management

interface is a key learning point for the HCIA exam
