

已通過驗證2V0-11.25熱門考題和資格考試領導者及100%合格率2V0-11.25學習筆記

從Google Drive中免費下載最新的PDFExamDumps 2V0-11.25 PDF版考試題庫：<https://drive.google.com/open?id=19XrUFY8qfVZLsb4UVyZ7Dt64iR-YmrSg>

作為VMware相關認證考試大綱的主要供應商，PDFExamDumps的2V0-11.25專家一直不斷地提供品質較高的產品，不斷為客戶提供免費線上客戶服務，並以最快的速度更新考試大綱。

你對自己現在的工作滿意嗎？對自己正在做的事情滿意嗎？想不想提升自己的水準呢？多掌握一些對工作有用的技能吧。那麼，在IT領域工作的你，當然是應該選擇參加IT認定考試獲得認證資格了。因為這樣可以更好地提升你自己。而且，最重要的是，你也可以向別人證明你掌握了更多的工作技能。那麼，快來參加VMware的2V0-11.25考試吧。這個考試可以幫助你實現你自己的願望。對通過這個考試沒有信心也沒關係。因為你可以來PDFExamDumps找到你想要的幫手和準備考試的工具。PDFExamDumps的考試資料一定能幫助你獲得2V0-11.25考試的認證資格。

2V0-11.25學習筆記，2V0-11.25考古題更新

我們PDFExamDumps VMware的2V0-11.25考試的問題包含了完整的無限制的轉儲，所以你很容易的通過考試，不管你是通過你的產品合格證或是其他當今流行的身份驗證，完美的展現PDFExamDumps VMware的2V0-11.25考試培訓資料的長處，這不僅僅是依靠，也是指導，這其實是最好的，你可以使用PDFExamDumps VMware的2V0-11.25考試培訓資料裏的問題和答案通過考試，獲得VMware的2V0-11.25考試認證。

VMware 2V0-11.25 考試大綱：

主題	簡介

主題 1	VMware by Broadcom Solution: This section of the exam measures skills of the cloud administrator and covers identifying VMware Cloud Foundation components like vSphere, vSAN, and NSX, as well as their architecture, including stretched configurations. It also assesses knowledge of requirements for implementing private cloud solutions, use cases for VMware Aria Suite components, vSphere IaaS control plane, Data Services Manager, and VMware Cloud Foundation Add-Ons. The focus is on the ability to recognize and apply the correct VMware solutions for various enterprise scenarios.
主題 2	IT Architectures, Technologies, Standards: There are no testable objectives in this section. However, this area establishes the foundational knowledge expected of cloud administrators, such as understanding basic IT infrastructure, virtualization, and cloud models. This section is relevant for cloud administrators and infrastructure engineers.
主題 3	Plan and Design the VMware by Broadcom Solution: There are no testable objectives in this section. Still, it is intended for solution architects who need to plan and design VMware Cloud Foundation deployments, focusing on sizing, architecture selection, and network storage design.
主題 4	Install, Configure, Administrate the VMware by Broadcom Solution: This section of the exam measures skills of the VMware Cloud Foundation administrator and covers the installation and configuration processes for VMware Cloud Foundation components, deploying and configuring management domains, NSX Edge Clusters, and the VMware Aria Suite Lifecycle. It assesses the ability to deploy workload domains, enable vSphere IaaS control plane, create vSphere namespaces, manage stretched clusters, and use VMware Cloud Foundation APIs. Candidates are also tested on scaling deployments, performing Day 2 operations like backup, recovery, lifecycle management, VM lifecycle management, configuring networking and storage, managing ESXi hosts, implementing encryption, and operationalizing VMware NSX, vSAN, and Aria Suite. The section is comprehensive, targeting those responsible for the ongoing administration and optimization of VMware environments.
主題 5	Troubleshoot and Optimize the VMware by Broadcom Solution: This section of the exam measures skills of the cloud infrastructure support engineer and covers diagnosing and resolving technical issues related to VMware Cloud Foundation deployment and operations. It includes troubleshooting the deployment process, vSphere, networking, vSAN, SDDC Manager, and Aria Suite. The section also evaluates the ability to optimize infrastructure performance, manage resources, and ensure efficient operation, focusing on the practical aspects of maintaining and enhancing VMware Cloud Foundation environments.

最新的 VCP-VCF Administrator 2V0-11.25 免費考試真題 (Q129-Q134):

問題 #129

A cloud administrator recently deployed a new VI workload domain. As part of the initial VI domain creation, the administrator created a new SSO domain. However, they reconsidered and now want the domain to use the same SSO domain as the management domain.

How can the VI domain be changed from a dedicated SSO domain to sharing the SSO domain with the management domain?

- A. From the VI Workload Domain vCenter Server instance, use the rsutil command to join the management domain SSO ring.
- B. From the Management Domain vCenter Server instance, use the rsutil command to add the VI workload domain to the management domain SSO ring.
- C. From the SDDC Manager console, use the rsutil command to add the VI workload domain to the management domain SSO ring.
- D. The vSphere SSO domain cannot be changed once it has been deployed and a new VI workload domain that is part of the Management SSO domain must be created, and workloads migrated.

答案: D

解題說明:

Once the vSphere Single Sign-On (SSO) domain is set up for a workload domain, it cannot be changed. If you need the VI workload domain to use the same SSO domain as the management domain, you must create a new VI workload domain that is part of the management domain's SSO ring, and then migrate the workloads to the new domain.

問題 #130

DRAG DROP

Arrange the steps in the correct order to generate a performance report in Aria Operations.

答案:

解題說明:

A screenshot of a computer AI-generated content may be incorrect.

問題 #131

An Administrator is configuring the network within their VCF management domain in preparation to deploy VMware Aria Suite Lifecycle.

What are the two types of virtual networks that the Administrator could configure to support the deployment?

(Choose two.)

- A. VLAN-backed Port Groups
- B. VXLAN-backed Network Pools
- C. VLAN-backed NSX Segments
- D. Overlay-backed NSX Segments

答案: A,D

解題說明:

VLAN-backed Port Groups are used in traditional network environments where VLANs are configured on the physical switches. These port groups can be configured in the management domain to support network connectivity.

Overlay-backed NSX Segments use NSX to create virtual networks overlaid on existing physical networks, which is essential for network virtualization and communication between virtual machines, especially in a VMware Cloud Foundation environment.

問題 #132

An administrator configures a Local Content Library on vCenter Server A, enables publishing, and creates Subscribed Content Libraries on vCenter Server B and vCenter Server C using the publishing URL. However, the contents of the subscribed libraries on vCenter B and C are not synchronizing with the source library on vCenter A.

Which step should the administrator take to troubleshoot the issue?

- A. Manually export the library content from vCenter Server A and import it into the subscribed libraries on vCenter B and C to initialize synchronization.
- B. Recreate the Subscribed Content Libraries on vCenter B and C with a new publishing URL from vCenter Server A to reset the synchronization configuration.
- C. Verify that network connectivity exists between vCenter Server A and the other two vCenters, and ensure that the required ports for Content Library synchronization are open.
- D. Enable bidirectional synchronization on the Content Library settings to ensure updates are propagated back and forth between vCenter Server A and the subscribed libraries.

答案: C

解題說明:

When subscribed Content Libraries are not synchronizing with the source Local Content Library, the primary troubleshooting step, as described in the official VMware documentation, is to verify network connectivity between the source vCenter (vCenter Server A) and the subscribing vCenters (vCenter Server B and C). The administrator must ensure that all required network ports for Content Library synchronization are open and accessible. Without proper network communication, the subscribing vCenters cannot retrieve or sync content from the published library.

Other steps, such as recreating the libraries, enabling bidirectional sync, or manually importing content, do not address the core issue of connectivity and port access, which is essential for automated synchronization to function correctly.

問題 #133

An Administrator is configuring the network within their VCF management domain in preparation to deploy VMware Aria Suite

What are the two types of virtual networks that the Administrator could configure to support the deployment? (Choose two.)

- 答案: A,D

Overlay-backed NSX Segments use NSX to create virtual networks overlaid on existing physical networks, which is essential for network virtualization and communication between virtual machines, especially in a VMware Cloud Foundation environment.
