Important Tips to Pass ISTQB ISTQB-CTFL Exam Quickly

As you know, we are now facing very great competitive pressure. We need to have more strength to get what we want, and ISTQB-CTFL free exam guide may give you these things. After you use our study materials, you can get Foundation Level certification, which will better show your ability, among many competitors, you will be very prominent. Using ISTQB-CTFL practice files is an important step for you to improve your soft power. I hope that you can spend a little time understanding what our ISTQB-CTFL study materials have to attract customers compared to other products in the industry.

ISTQB Certified Tester Foundation Level (CTFL v4.0) Sample Questions (Q143-Q148):

NEW QUESTION # 143
Calculate the measurement error SD for the following estimates done using three point estimation technique-Most optimistic effort (a) -120 person days Most likely effort (m) -180 person days Most pessimistic effort (b) - 240 person days

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

NEW QUESTION # 144
Which of the following types of bugs are more likely to be found by static testing then by dynamic testing?

- A. Variables that were declared in the code without initialization
- B. Crashes of the application
- C. A sub-system that does not perform the intended functionality
- D. Functions that take much longer time to complete than expected

Answer: A

NEW QUESTION # 145

Which of the following statements best describes the way in which decision coverage is measured?

- A. Measured as the number of lines of code executed by the tests, divided by the total number of lines of code in the test object.
- B. It is not possible to accurately measure decision coverage.
- C. Measured as the number of decision outcomes executed by the tests, divided by the total number of decision outcomes in the test object.
- D. Measured as the number of statements executed by the tests, divided by the total number of executable statements in the code.

Answer: C

Explanation:
Decision coverage, also known as branch coverage, is measured as the number of decision outcomes executed by the tests divided by the total number of decision outcomes in the test object. It ensures that every possible branch (true/false) decision in the code has been executed at least once.

NEW QUESTION # 146

Which of the following BEST explains a drawback of independent testing?

- A. An independent test team may possess specializations in specific test types such as usability or security which detract from the overall effectiveness of the test team
- B. Due to their differing backgrounds and perspectives, an independent test team may discover defects which the developers did not uncover
- C. An independent test team may be isolated from the rest of the development and project team
- D. Having the business organization participate as an independent test team can hurt the overall testing effort since business participants are often not trained nor experienced in testing

Answer: C

Explanation:
Independent testing offers several advantages, such as unbiased testing and detection of different defects.
However, a drawback is that an independent test team may be isolated from the development team and project team. This can lead to communication gaps, reduced collaboration, and a lack of understanding of the project context.
According to the ISTQB Certified Tester Foundation Level (CTFL) syllabus v4.0, an independent test team may not have the same level of understanding of the system as the development team, leading to potential issues in communication and integration (ISTQB not-for-profit association).

NEW QUESTION # 147

A company runs a pilot project for evaluation of a test automation tool. Which of the following is NOT a valid object of this pilot project?

- A. Decide upon standards for tool implementation
- B. Check haw the tool fits to the existing test processes
- C. Train all testers on using the tool

- D. Get familiar with the functionality and options of the tool

Answer: C

Explanation:
* A pilot project is a small-scale experiment or trial that is conducted to evaluate the feasibility, effectiveness, and suitability of a test automation tool before implementing it on a larger scale1.
* The objectives of a pilot project may vary depending on the context and scope of the test automation initiative, but some common ones are2:
* To get familiar with the functionality and options of the tool
* To check how the tool fits to the existing test processes and environment
* To assess the benefits and challenges of using the tool
* To decide upon standards and guidelines for tool implementation and usage
* To estimate the costs and resources required for tool deployment and maintenance
* Therefore, option C is not a valid objective of a pilot project, as it is not necessary to train all testers on using the tool at this stage. Training all testers on using the tool would be more appropriate after the tool has been selected and approved for full-scale implementation, and after the standards and guidelines have been established. Training all testers on using the tool during the pilot project would be inefficient, costly, and premature, as the tool may not be suitable or effective for the intended purpose, or may be replaced by another tool later.
