## Nutanix NCP-MCA Free Download Pdf, Cert NCP-MCA Guide

Learning knowledge is just like building a house, our NCP-MCA training materials serve as making the solid foundation from the start with higher efficiency. Even if this is just the first time you are preparing for the exam, you can expect high grade. Taking full advantage of our NCP-MCA Preparation exam and getting to know more about them means higher possibility of it. And if you have a try on our NCP-MCA exam questions, you will love them.

## Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Sample Questions (Q88-Q93):

NEW QUESTION # 88

Which option is used to test or validate scripts before deployment?

- A. PowerShell
- B. EScript
- C. Shell
- **D. Test Script**

**Answer: D**

Explanation:

Test Script is a feature of Nutanix Cloud Manager (NCM) Self-Service that allows users to test or validate scripts before deployment. Test Script enables users to run scripts on a VM without creating a blueprint or a runbook. Users can select a VM, choose a script type, enter the script content, and execute the script. The output of the script is displayed in the Test Script window. Test Script can be used to troubleshoot errors, verify functionality, or preview the results of a script before using it in a blueprint or a runbook. Reference: Nutanix Certified Professional - Multicloud Automation (NCP-MCA) Exam Blueprint Guide, page 14, section 3.1. Nutanix Multicloud Automation Administration (NMCAA) course, module 3, lesson 4. Validate Your Nutanix Cloud Manager Self-Service Skills + Access Special Offer.

### NEW QUESTION # 89

An administrator created a Self-Service Project, including a blueprint that deploys a multi-tier application and a Playbook to perform post-deployment automation (e.g., tagging, monitoring setup, and email notifications).

However, during testing, users report that while the VMs are successfully deployed, the post-deployment automation tasks are not executing as expected.

Which two steps should the administrator take to determine the cause of the issue? (Choose two.)

- A. Reassign the blueprint to a different Project and test deployment to rule out project-specific quota limits.
- **B. Verify that the Playbook is properly invoked by the correct blueprint action (e.g., Post-Deploy).**
- **C. Check the Playbook Execution History to verify if the Playbook was triggered and any tasks failed.**
- D. Review the Audit Logs of the Prism Element cluster for VM creation timestamps.

**Answer: B,C**

Explanation:

To troubleshoot why a post-deployment automation workflow (Playbook) is not executing, the administrator should investigate the specific execution records and the trigger configuration:

\* Check Playbook Execution History (C): The Playbook "Plays" or execution history (found in the Intelligent Operations or Self-Service Audit tab depending on the specific type of playbook used) provides the definitive record of whether the system attempted to run the automation. If the playbook appears in the history with a "Failed" status, the logs will indicate which specific step (e.g., HTTP task or API call) failed. If it does not appear at all, the issue lies in the trigger.

\* Verify Invocation (D): If the playbook is intended to run "post-deployment," it must be explicitly triggered.

\* For X-Play Playbooks, this involves verifying the Trigger logic (e.g., ensuring the "VM Created" event filter matches the specific Project Categories assigned to the new VMs).

\* For Self-Service (Calm) Runbooks, this involves verifying that the blueprint's "Post-Create" or "Profile" actions are correctly configured to call the Runbook.

\* Confirming these settings ensures the automation is properly "hooked" into the deployment lifecycle.

Reviewing VM creation logs in Prism Element (Option B) only confirms the VM was built (which is already known), and reassigning the project (Option A) is a destructive test that does not isolate the automation logic.

### NEW QUESTION # 90

Which two groups of operations can a Prism Admin or Super Admin role perform? (Choose two.)

- **A. Create, read, update, or delete an action template in the action gallery**
- B. Create, read, automate, delete, enable, and run playbooks
- **C. Create, read, update, delete, enable, and run playbooks**
- D. Create, read, automate, or delete an action template in the action gallery

**Answer: A,C**

Explanation:

A Prism Admin or Super Admin role can perform the following operations related to X-Play and Nutanix Calm12:

- \* Create, read, update, or delete an action template in the action gallery
- \* Create, read, update, delete, enable, and run playbooks
- \* Create, read, update, delete, enable, and run blueprints and runbooks
- \* Manage applications and projects
- \* Configure endpoints and plug-ins
- \* Access the library and categories Option A is incorrect because the action gallery does not support automation of action templates. Option C is incorrect because only a Prism Admin or Super Admin role can enable and run playbooks, not a Prism User role3. References:

- \* Nutanix Multicloud Automation Administration (NMCAA)
- \* Prism user permissions - what are the options?

### NEW QUESTION # 91

When creating a blueprint, which Pre-create and Post-delete tasks are valid?

- A. Execute, Set variable, API, Delay
- B. Create, Start, Stop, Soft Delete
- C. Execute, Set variable, HTTP, Delay
- D. Create, Start, Stop, Delete

**Answer: C**

Explanation:

Pre-create and Post-delete tasks are actions that can be performed before creating or after deleting a blueprint deployment. They can be used to integrate with external systems, set variables, or add delays. The valid tasks are Execute, Set variable, HTTP, and Delay. Create, Start, Stop, and Delete are not valid tasks, as they are part of the deployment lifecycle, not the pre-create or post-delete actions. References: Nutanix Certified Professional - Multicloud Automation (NCP-MCA) Exam Blueprint Guide, page 10; Nutanix Multicloud Automation Administration (NMCAA) Course, Module 5: Blueprints.

### NEW QUESTION # 92

Which Providers are supported in Multi-VM Blueprints? (Choose two.)

- A. IBM Cloud
- B. Amazon AWS
- C. Nutanix
- D. Oracle Cloud
- E. Microsoft Azure

**Answer: B,C**

Explanation:

According to the Nutanix Multicloud Automation Administration (NMCAA) course1, you can create and configure multi-VM blueprints for the Nutanix, AWS, VMware, GCP, and Azure providers. However, according to the Nutanix Certified Professional - Multicloud Automation (NCP-MCA) Exam Blueprint Guide2, the exam objectives only cover Nutanix and AWS as the providers for multi-VM blueprints.

Therefore, the correct answer is C. Nutanix and E. Amazon AWS. References: Nutanix Multicloud Automation Administration (NMCAA) course and Nutanix Certified Professional - Multicloud Automation (NCP-MCA) Exam Blueprint Guide

### NEW QUESTION # 93

.....

The PDF version of our NCP-MCA guide quiz is prepared for you to print it and read it everywhere. It is convenient for you to see the answers to the questions and remember them. After you buy the PDF version of our NCP-MCA study material, you will get an E-mail from us in 5 to 10 minutes after payment. Once any new question is found, we will send you a link to download a new version of the NCP-MCA training engine. So don't worry if you are left behind the trend.
