100% Pass Quiz CompTIA - Valid New XK0-005 Braindumps Questions

There are some main features of our products and we believe you will be satisfied with our XK0-005 test questions. Our study materials have enough confidence to provide the best XK0-005 exam torrent for your study to pass it. With many years work

experience, we have fast reaction speed to market change and need. In this way, we have the latest XK0-005 Guide Torrent. You don't worry about that how to keep up with the market trend, just follow us.

CompTIA Linux+ Certification Exam Sample Questions (Q541-Q546):

NEW QUESTION # 541

A systems administrator changed the file permissions on the myfile file:

```
-rwxrwxr-x 1 admin editors ... myfile
```

Then the administrator added an existing user test to the editors group:

```
sudo usermod -a -G editors test
```

However, the user test is still unable to edit the file. Which of the following solutions will fix this issue?

- A. The user "test" needs to log out and log back in before editing the myfile file.
- B. The group for the user "test" needs to be reloaded by running `sudo source /etc/group`.
- C. In order to edit the file, additional permissions are required that the user "test" does not have.
- D. The file is only writable by the root user, and the user "test" needs root permissions.

Answer: A

NEW QUESTION # 542

A Linux systems administrator is configuring a new filesystem that needs the capability to be mounted persistently across reboots.

Which of the following commands will accomplish this task? (Choose two.)

- A. `echo "/data /dev/sdc1 ext4 defaults 0 0" >> /etc/fstab`
- B. `fsck /dev/sdc1`
- C. `mkfs.ext4 /dev/sdc1`
- D. `echo "/dev/sdc1 /data ext4 defaults 0 0" >> /etc/fstab`
- E. `df -h /data`
- F. `fdisk -l /dev/sdc1`

Answer: C,D

NEW QUESTION # 543

A systems administrator just downloaded a source code package with the file extension TGZ.

Which of the following commands would decompress and unarchive the package?

- A. `tar -xvf`
- B. `tar -zcvpf`
- C. `tar -xf`
- D. `tar -zxvf`

Answer: D

NEW QUESTION # 544

A cloud engineer needs to remove all dangling images and delete all the images that do not have an associated container. Which of the following commands will help to accomplish this task?

- A. `docker images rmi --all`
- B. `docker rmi -a images`
- C. `docker images prune -a`
- D. `docker push images -a`

Answer: C

Explanation:

The command `docker images prune -a` will help to remove all dangling images and delete all the images that do not have an associated container. The docker command is a tool for managing Docker containers and images. The images subcommand

operates on images. The prune option removes unused images. The -a option removes all images, not just dangling ones. A dangling image is an image that is not tagged and is not referenced by any container. This command will accomplish the task of cleaning up the unused images. The other options are incorrect because they either do not exist (docker push images -a or docker images rmi --all) or do not remove images (docker rmi -a images only removes images that match the name or ID of "images"). Reference: CompTIA Linux+ (XK0-005) Certification Study Guide, Chapter 19: Managing Cloud and Virtualization Technologies, page 567.

NEW QUESTION # 545

A Linux administrator is troubleshooting an issue in which users are not able to access <https://portal.comptia.org> from a specific workstation. The administrator runs a few commands and receives the following output:
Which of the following tasks should the administrator perform to resolve this issue?

- A. Update the name server in resolv.conf to use an external DNS server.
- B. Clear the local DNS cache on the workstation and rerun the host command.
- C. Remove the entry for portal.comptia.org from the local hosts file.
- D. Add a network route from the 10.10.10.0/24 to the 192.168.0.0/16.

Answer: C

Explanation:

The best task to perform to resolve this issue is B. Remove the entry for portal.comptia.org from the local hosts file. This is because the local hosts file has a wrong entry that maps portal.comptia.org to 10.10.10.55, which is different from the actual IP address of 192.168.1.55 that is returned by the DNS server. This causes a mismatch and prevents the workstation from accessing the website. By removing or correcting the entry in the hosts file, the workstation will use the DNS server to resolve the domain name and access the website successfully.

To remove or edit the entry in the hosts file, you need to have root privileges and use a text editor such as vi or nano. For example, you can run the command:

```
sudo vi /etc/hosts
```

and delete or modify the line that says:

```
10.10.10.55 portal.comptia.org
```

Then save and exit the file.

NEW QUESTION # 546

.....

You will face plenty of options in your whole lives. Sometimes, you must decisively abandon some trivial things, and then you can harvest happiness and fortunes. Now, our XK0-005 guide materials just need to cost you less spare time, then you will acquire useful skills which may help you solve a lot of the difficulties in your job. Besides, our XK0-005 Exam Questions will help you pass the exam and get the certification for sure.
