Printable Mule-Dev-301 PDF & Mule-Dev-301 New Dumps Free

Do you want to get the Mule-Dev-301 certification to boost your career? Do you desire to feel competent and confident going into your real Salesforce Certified MuleSoft Developer II certification exam? Real Mule-Dev-301 Exam Questions are available right here at DumpsTests, so don't waste your time going elsewhere. By practicing with our Real Mule-Dev-301 Exam Questions, which are offered in Mule-Dev-301 PDF, web-based practice test, and desktop practice exam software formats, you can crack your Salesforce Certified MuleSoft Developer II (Mule-Dev-301) certification test on first attempt and advance in the Salesforce industry.

Salesforce Certified MuleSoft Developer II Sample Questions (Q25-Q30):

NEW QUESTION # 25

A Mule API receives a JSON payload and updates the target system with the payload. The developer uses JSON schemas to

ensure the data is valid.

How can the data be validation before posting to the target system?

- A. Use a DataWeave 2.09 transform operation, and at the log of the DataWeave script, add:
%dw 2.0
Import json-modules
- B. Apply the JSON Schema policy in API Manager and reference the correct schema in the policy configuration
- C. Add the JSON module dependency and add the validate-schema operation in the flow, configured to reference the schema
- D. Using the DataWeave if Else condition test the values of the payload against the examples included in the schema

Answer: C

Explanation:

To validate the data before posting to the target system, the developer should add the JSON module dependency and add the validate-schema operation in the flow, configured to reference the schema. The JSON module provides a validate-schema operation that validates a JSON payload against a JSON schema and throws an error if the payload is invalid. Reference: <https://docs.mulesoft.com/json-module/1.1/json-validate-schema>

NEW QUESTION # 26

Refer to the exhibit.

What action must be performed to log all the errors raised by the VM Connector?

```
1 <?xml version="1.0" encoding="utf-8"?>
2 <Configuration>
3
4 <Appenders>
5 <RollingFile name="file"
13 </RollingFile>
14 </Appenders>
15 <Loggers>
16 <Logger
17 </Logger>
18 </Loggers>
19 </Configuration>
```

- A. Add `<AsyncLogger name='org.mule.extension.vm' level=ERROR'/>` inside the Appenders tag
- B. Nothing, as error-level events are automatically logged
- C. Add `<AsyncLogger name='org.mule.extension.vm' level=ERROR'I>` inside the Logger tag
- D. Configure `<Logger level='ERROR'/>` inside the VM Connector configuration

Answer: A

Explanation:

To log all the errors raised by the VM Connector, the developer needs to add an async logger with the name 'org.mule.extension.vm' and the level 'ERROR' inside the appenders tag of the log4j2.xml file. This will enable logging all error-level events generated by the VM Connector to the console appender. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/logging-in-mule#configuring-custom-logging-settings>

NEW QUESTION # 27

When implementing a synchronous API where the event source is an HTTP Listener, a developer needs to return the same correlation ID back to the caller in the HTTP response header.

How can this be achieved?

- A. Configure a custom correlation policy
- B. Enable the auto-generate CorrelationID option when scaffolding the flow
- C. Enable the CorrelationID checkbox in the HTTP Listener configuration
- D. NO action is needed as the correlation ID is returned to the caller in the response header by default

Answer: D

Explanation:

When implementing a synchronous API where the event source is an HTTP Listener, Mule automatically propagates some message attributes between flows via outbound and inbound properties. One of these attributes is correlation ID, which is returned to the caller in the response header by default as MULE_CORRELATION_ID. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/about-mule-message#message-attributes>

NEW QUESTION # 28

The HTTP Request operation raises an HTTP CONNECTIVITY error. Which HTTP status code and body are returned to the web client?

- A. HTTP Status Code:500.
Body 'The HTTP CONNECTIVITY Error description
- **B. HTTP Status Code:500.**
Body 'Error in processing your request
- C. HTTP Status Code:200.
Body 'Error in processing your request
- D. HTTP Status Code:500.
Body 'Error in processing your request

Answer: B

Explanation:

When the HTTP Request operation raises an HTTP CONNECTIVITY error, it triggers an on-error-continue handler that sets a payload with 'Error in processing your request'. Since no status code is explicitly set in this handler, it defaults to 500 (INTERNAL SERVER ERROR). Therefore, the web client receives an HTTP response with status code 500 and body 'Error in processing your request'. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/error-handling#on-error-continue>

NEW QUESTION # 29

A Mule implementation uses a HTTP Request within an Until Successful scope to connect to an API.

How should a permanent error response like HTTP:UNAUTHORIZED be handle inside Until Successful to reduce latency?

- A. Put the HTTP Request inside a try scope in Unit Successful.
In the error handler, use On Error Continue to catch permanent errors like HTTP UNAUTHORIZED.
- B. Configure retrying until a MULE_RETRY_EXHAUSTED error is raised or the API responds back with a successful response.
- C. In Until Successful configuration, set the retry count to 1 for error type HTTP: UNAUTHORIZED.
- D. Put the HTTP Request inside a try scope in Unit Successful.
In the error handler, use On Error Propagate to catch permanent errors like HTTP UNAUTHORIZED.

Answer: A

Explanation:

To handle a permanent error response like HTTP:UNAUTHORIZED inside Until Successful, the developer should put the HTTP Request inside a try scope in Unit Successful, and use On Error Continue to catch permanent errors like HTTP UNAUTHORIZED in the error handler. This way, the developer can avoid retrying requests that will always fail due to a permanent error, and reduce latency. On Error Continue allows the flow to continue processing after handling the error. Reference:

<https://docs.mulesoft.com/mule-runtime/4.3/until-successful-scope> <https://docs.mulesoft.com/mule-runtime/4.3/on-error-continue-concept>

NEW QUESTION # 30

.....

For the Salesforce Certified MuleSoft Developer II (Mule-Dev-301) web-based practice exam no special software installation is required. Because it is a browser-based Salesforce Certified MuleSoft Developer II (Mule-Dev-301) practice test. The web-based Salesforce Certified MuleSoft Developer II (Mule-Dev-301) practice exam works on all operating systems like Mac, Linux, iOS, Android, and Windows.
