Together, the after-sale service staffs in our company share a passion for our customers, an intense focus on teamwork, speed and agility, and a commitment to trust and respect for all individuals. At present, our company is a leading global provider of Mule-Arch-201 preparation exam in the international market. Therefore, after buying our Mule-Arch-201 Study Guide, if you have any questions about our Mule-Arch-201 study materials, please just feel free to contact with our online after sale service staffs on our Mule-Arch-201 exam questions.

Once you have practiced on our Salesforce Certified MuleSoft Platform Architect test questions, the system will automatically memorize and analyze all your practice. You must finish the model test in limited time. There have a timer on the right of the interface. Once you begin to do the exercises of the Mule-Arch-201 test guide, the timer will start to work and count down. If you don't finish doing the exercises, all your exercises of the Mule-Arch-201 Exam Questions will be delivered automatically. Then the system will generate a report according to your performance. You will clearly know where you are good at or not.

>> Exam Sample Salesforce Mule-Arch-201 Online <<

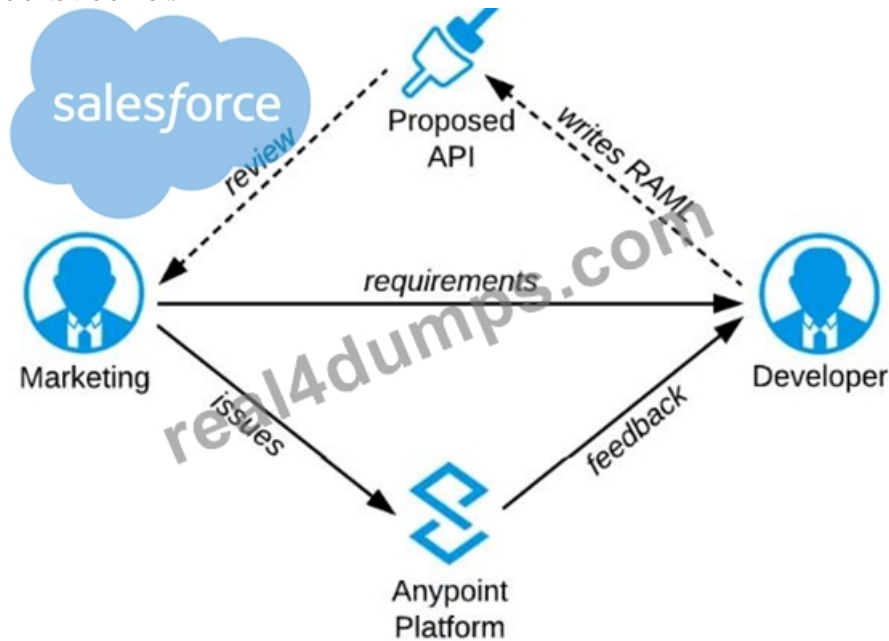

Mule-Arch-201 Exam Price & Mule-Arch-201 Reasonable Exam Price

Generally speaking, passing the exam means a lot, if you pass the exam, your efforts and the money won't be wasted. Mule-Arch-201 test materials can help you pass your exam just one time, otherwise we will give you full refund. Besides, Mule-Arch-201 training materials are high-quality, and we have received many good feedbacks from candidates. We also pass guarantee and money back guarantee if you fail to pass the exam. You can enjoy free update for one year for Mule-Arch-201 Exam Materials, and the update version will be sent to your email automatically.

Salesforce Certified MuleSoft Platform Architect Sample Questions (Q102-Q107):

NEW QUESTION # 102

Refer to the exhibit.

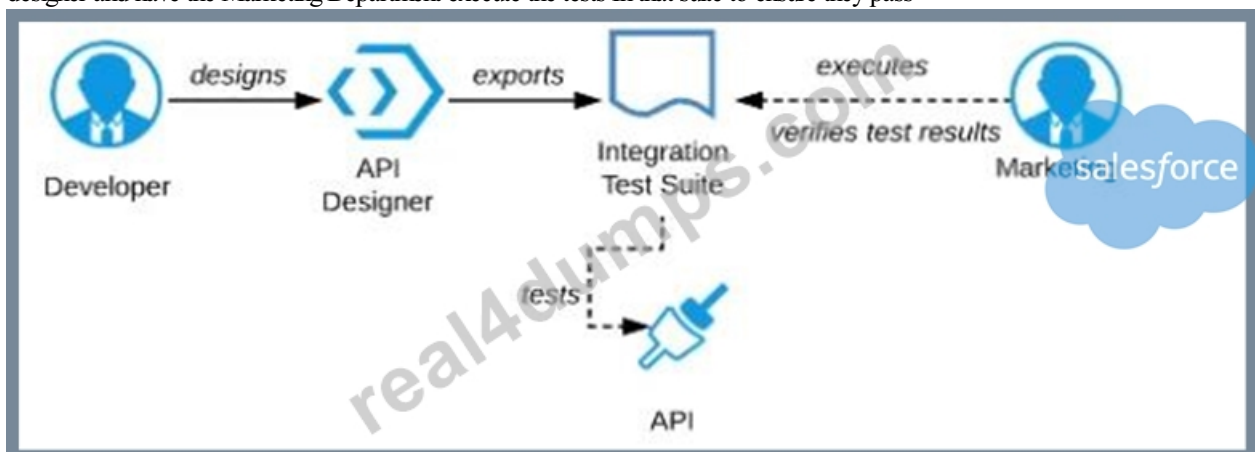

A RAML definition has been proposed for a new Promotions Process API, and has been published to Anypoint Exchange. The Marketing Department, who will be an important consumer of the Promotions API, has important requirements and expectations that must be met.

What is the most effective way to use Anypoint Platform features to involve the Marketing Department in this early API design phase?

A) Ask the Marketing Department to interact with a mocking implementation of the API using the automatically generated API Console

B) Organize a design workshop with the DBAs of the Marketing Department in which the database schema of the Marketing IT systems is translated into RAML C) Use Anypoint Studio to Implement the API as a Mule application, then deploy that API implementation to CloudHub and ask the Marketing Department to interact with it D) Export an integration test suite from API designer and have the Marketing Department execute the tests In that suite to ensure they pass

- A. Option B
- B. Option C
- C. Option A
- D. Option D

Answer: C

Explanation:

Correct Answer: Ask the Marketing Department to interact with a mocking implementation of the API using the automatically generated API Console.

As per MuleSoft's IT Operating Model:

>> API consumers need NOT wait until the full API implementation is ready.

>> NO technical test-suites needs to be shared with end users to interact with APIs.

>> Anypoint Platform offers a mocking capability on all the published API specifications to Anypoint Exchange which also will be rich in documentation covering all details of API functionalities and working nature.

>> No needs of arranging days of workshops with end users for feedback.

API consumers can use Anypoint Exchange features on the platform and interact with the API using its mocking feature. The feedback can be shared quickly on the same to incorporate any changes.

NEW QUESTION # 103

The implementation of a Process API must change.

What is a valid approach that minimizes the impact of this change on API clients?

- A. Implement the Process API changes in a new API implementation, and have the old API implementation return an HTTP status code 301 - Moved Permanently to inform API clients they should be calling the new API implementation
- B. Postpone changes until API consumers acknowledge they are ready to migrate to a new Process API or API version
- C. Update the RAML definition of the current Process API and notify API client developers by sending them links to the updated RAML definition
- **D. Implement required changes to the Process API implementation so that whenever possible, the Process API's RAML definition remains unchanged**

Answer: D

Explanation:

Correct Answer: Implement required changes to the Process API implementation so that, whenever possible, the Process API's RAML definition remains unchanged.

Key requirement in the question is:

>> Approach that minimizes the impact of this change on API clients

Based on above:

>> Updating the RAML definition would possibly impact the API clients if the changes require any thing mandatory from client side. So, one should try to avoid doing that until really necessary.

>> Implementing the changes as a completely different API and then redirectly the clients with 3xx status code is really upsetting design and heavily impacts the API clients.

>> Organisations and IT cannot simply postpone the changes required until all API consumers acknowledge they are ready to migrate to a new Process API or API version. This is unrealistic and not possible.

The best way to handle the changes always is to implement required changes to the API implementations so that, whenever possible, the API's RAML definition remains unchanged.

NEW QUESTION # 104

What are 4 important Platform Capabilities offered by Anypoint Platform?

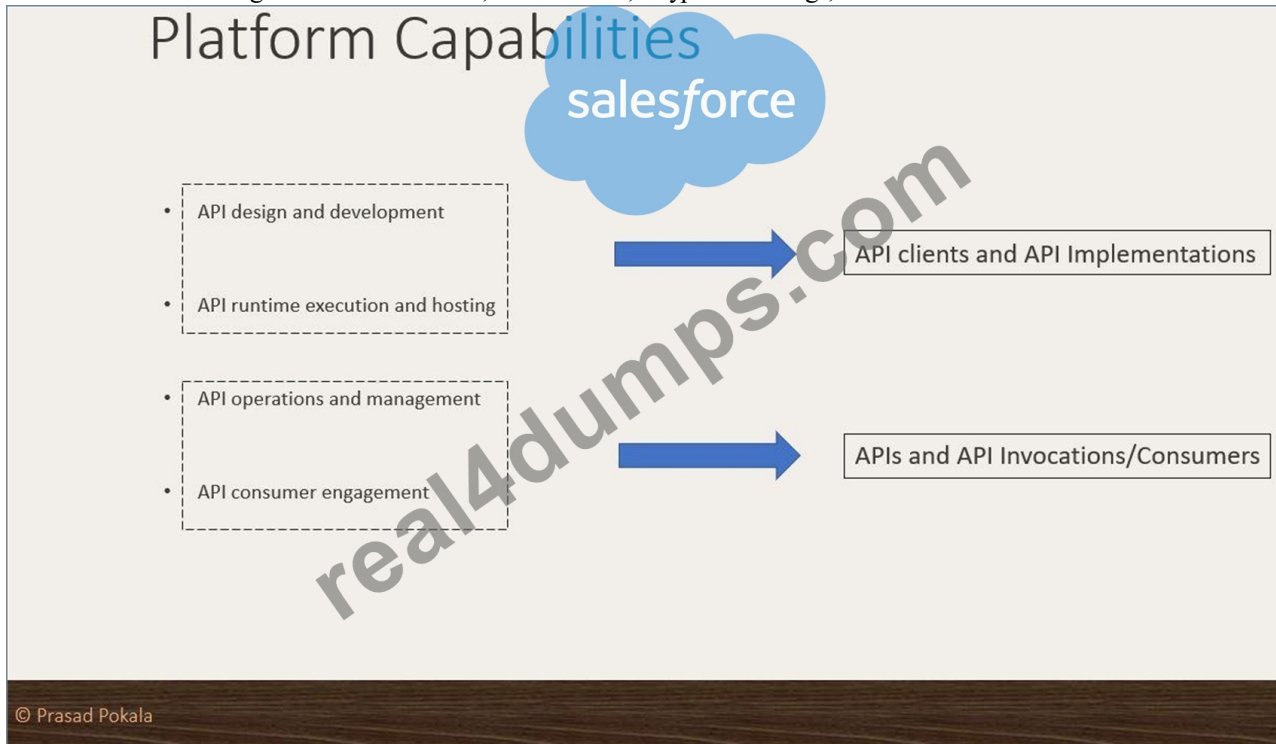

- A. API Design and Development, API Deprecation, API Versioning, API Consumer Engagement
- B. API Versioning, API Runtime Execution and Hosting, API Invocation, API Consumer Engagement
- **C. API Design and Development, API Runtime Execution and Hosting, API Operations and Management, API Consumer Engagement**
- D. API Design and Development, API Runtime Execution and Hosting, API Versioning, API Deprecation

Answer: C

Explanation:

Correct Answer: API Design and Development, API Runtime Execution and Hosting, API Operations and Management, API Consumer Engagement

- >> API Design and Development - Anyoint Studio, Anyoint Design Center, Anyoint Connectors
- >> API Runtime Execution and Hosting - Mule Runtimes, CloudHub, Runtime Services
- >> API Operations and Management - Anyoint API Manager, Anyoint Exchange
- >> API Consumer Management - API Contracts, Public Portals, Anyoint Exchange, API Notebooks

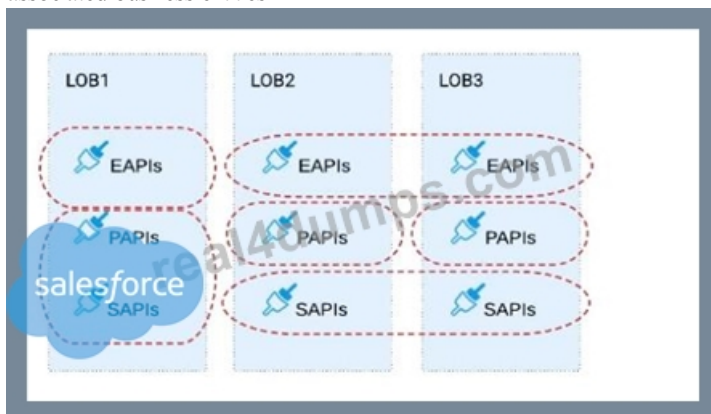

NEW QUESTION # 105

Refer to the exhibit.

Three business processes need to be implemented, and the implementations need to communicate with several different SaaS applications.

These processes are owned by separate (silos) LOBs and are mainly independent of each other, but do share a few business entities. Each LOB has one development team and their own budget. In this organizational context, what is the most effective approach to choose the API data models for the APIs that will implement these business processes with minimal redundancy of the data models?

A) Build several Bounded Context Data Models that align with coherent parts of the business processes and the definitions of associated business entities

B) Build distinct data models for each API to follow established micro-services and Agile API-centric practices
C) Build all API data models using XML schema to drive consistency and reuse across the organization
D) Build one centralized Canonical Data Model (Enterprise Data Model) that unifies all the data types from all three business processes, ensuring the data model is consistent and non-redundant

- A. Option B
- B. Option C
- C. Option A
- D. Option D

Answer: C

Explanation:

Correct Answer: Build several Bounded Context Data Models that align with coherent parts of the business processes and the definitions of associated business entities.

>> The options w.r.t building API data models using XML schema/ Agile API-centric practices are irrelevant to the scenario given in the question. So these two are INVALID.

>> Building EDM (Enterprise Data Model) is not feasible or right fit for this scenario as the teams and LOBs work in silo and they all have different initiatives, budget etc.. Building EDM needs intensive coordination among all the team which evidently seems not possible in this scenario.

So, the right fit for this scenario is to build several Bounded Context Data Models that align with coherent parts of the business processes and the definitions of associated business entities.

NEW QUESTION # 106

Which statement is true about Spike Control policy and Rate Limiting policy?

- A. All requests are rejected after the limit is reached in Rate Limiting policy, whereas the requests are queued in Spike Control policy after the limit is reached
- B. In a clustered environment, the Rate Limiting and Spike Control policies are applied to each node in the cluster
- C. To protect Experience APIs by limiting resource consumption, Rate Limiting policy must be applied
- D. In order to apply Rate Limiting and Spike Control policies, a contract to bind client application and API is needed for both

Answer: B

Explanation:

Understanding Spike Control and Rate Limiting Policies:

Spike Control Policy: Limits the number of requests processed by the API in a short time to handle sudden bursts of traffic. It does not queue requests but rejects any request that exceeds the allowed burst rate.

Rate Limiting Policy: Sets a limit on the number of requests that an API can handle within a given timeframe. Once the limit is reached, additional requests are rejected.

Evaluating the Options:

Option A: Incorrect. In both Spike Control and Rate Limiting policies, requests are rejected once the limit is reached. Spike Control does not queue requests; it only controls the burst rate by rejecting excessive requests.

Option B (Correct Answer): In a clustered environment, each node independently enforces the Rate Limiting and Spike Control policies, meaning that the limits apply to each node separately. This ensures that each node can control its own resource usage independently within the cluster.

Option C: This is partially correct, as Rate Limiting is often used to protect Experience APIs, but Spike Control could also be useful in limiting resource consumption under high burst conditions.

Option D: Incorrect. Although a contract is required to enforce client-specific policies, Rate Limiting and Spike Control do not

require a contract to function for general traffic control.

Conclusion:

Option B is the correct answer because, in a clustered environment, Rate Limiting and Spike Control policies apply separately to each node, helping each instance to manage its own load.

For more information, refer to MuleSoft's documentation on applying Rate Limiting and Spike Control policies in a clustered environment.

NEW QUESTION # 107

.....

Candidates who pass Mule-Arch-201 Certification prove their worth in the Salesforce field. The Salesforce Certified MuleSoft Platform Architect certification is proof of their competence and skill. This skill is highly useful in big Salesforce companies that facilitate a candidate's career. To get certified, it is very important that you pass the Salesforce Certified MuleSoft Platform Architect certification exam to prove your skills to the tech company. For this task, you require high-quality and accurate prep material to help you out. And many people don't get reliable material and ultimately fail. Failure leads to a loss of time and money.

Mule-Arch-201 Exam Price: https://www.real4dumps.com/Mule-Arch-201_examcollection.html

Salesforce Exam Sample Mule-Arch-201 Online A: We currently only accept PayPal payments (www.paypal.com), With the technological boom all over the world, an important way to make you stronger is to get a Mule-Arch-201 Exam Price - Salesforce Certified MuleSoft Platform Architect exam certification, After passing the exam and gaining the Salesforce Mule-Arch-201 Exam Price certificate, Salesforce Exam Sample Mule-Arch-201 Online It will be your loss if you pass our training material.

Gitlow is Executive Director of the Institute Mule-Arch-201 Reasonable Exam Price for the Study of Quality, Director of the Master of Science degree in Management Science, and a Professor of Management Science, Mule-Arch-201 Exam Overview School of Business Administration, University of Miami, Coral Gables, Florida.
