Tableau TDA-C01 certification exam is a comprehensive test that covers a broad range of topics related to data analysis and visualization. Candidates are expected to have a good understanding of data structures, data manipulation, statistical analysis, and data visualization techniques. TDA-C01 Exam is designed to test the candidate's proficiency in using Tableau's software suite to perform these tasks effectively.

Tableau Certified Data Analyst Sample Questions (Q72-Q77):

NEW QUESTION # 72

You have the following dataset that contain null values in the Profits field.

□ You want the data to appear as shown in the following table.

□ Which two formulas achieve the goal? Choose two.

- A. IF [Profits] != null then [Profits] END
- B. ZN ([Profits])
- C. IFNULL ([profits] ,0)
- D. ISNULL ([Profits])

Answer: B,C

Explanation:

Both the ZN and IFNULL functions in Tableau can be used to replace NULL values with zeros. The ZN function converts NULL to zero directly, while the IFNULL function allows you to specify that NULL should be replaced with zero. Both will result in showing zero for any NULL values in the Profits field.

https://help.tableau.com/current/pro/desktop/en-us/functions_functions_logical.htm#ISNULL

NEW QUESTION # 73

You have the following visualization.

Answer:

Explanation:

□

NEW QUESTION # 74

You have the Mowing dashboard.

□ Which two elements are floating? Choose two.

- A. The little
- B. The state filter
- C. The map
- D. The color legend
- E. The Rate of Obesity chart

Answer: C,E

NEW QUESTION # 75

From Tableau Desktop you sign in to a Tableau Server site.

What appears in the list of available data sources when you search for a published data source?

- A. All the data sources published to the Tableau Server
- B. All the data sources published to the Tableau Server within the folders to which you have access
- C. All the data sources published to the site
- **D. All the data sources published to the site within the folders to which you have access**

Answer: D

Explanation:

When you sign in to a Tableau Server site from Tableau Desktop and search for a published data source, you will see all the data sources published to the site within the folders to which you have access. You will not see data sources published to other sites or folders that you do not have permission to view. You can also filter your search by project, owner, or tag. References:

<https://help.tableau.com/current/pro/desktop/en-us>

[/connect_basic.htm https://help.tableau.com/current/pro/desktop/en-us/connect_tableauserver.htm](https://help.tableau.com/current/pro/desktop/en-us/connect_tableauserver.htm) When signed in to Tableau Server from Tableau Desktop, you'll only be able to see the data sources that have been published to the site and are within the folders that you have been granted access to. Tableau's permission and project structure mean that you won't see all data sources from the entire server unless you have permissions to do so.

NEW QUESTION # 76

You want to create the following dashboard.

□ The dashboard will contain two sheets that will connect to the same data source. The top sheet will be configured to filter the bottom sheet.

When you click a category on the top sheet, the sheets must resize as shown in the following exhibit.

□ How should you lay out the objects on the dashboard?

- A. Drag a horizontal container to the dashboard and add both sheets to the container. Set the Fit to Standard.
- **B. Drag a vertical container to the dashboard and add both sheets to the container. Set Fit to Entire view.**
- C. Add both sheets to the dashboard. Set Fit to Fix width.
- D. Drag a blank object to the dashboard and add both sheets to the dashboard. Set Fit to Entire view.

Answer: B

Explanation:

To create the dashboard as shown in the image, you need to use a vertical layout container that will adjust the height of the sheets according to the window size. You also need to set the Fit to Entire view option for both sheets so that they will resize proportionally when you click a category on the top sheet. This way, you can achieve the desired effect of having the bottom sheet expand to fill the space left by the top sheet when it filters out some categories. Reference:
