만약 아직도 Oracle 1Z0-1109-25 시험패스를 위하여 고군분투하고 있다면 바로 우리 ITDumpsKR를 선택함으로 여러분의 고민을 날려버릴 수 있습니다, 우리 ITDumpsKR에서는 최고의 최신의 덤프자료를 제공 함으로 여러분을 도와 Oracle 1Z0-1109-25 인증자격증을 쉽게 취득할 수 있게 해드립니다. 만약 Oracle 1Z0-1109-25 인증시험으로 한층 업그레이드된 자신을 만나고 싶다면 우리 ITDumpsKR 선택을 후회하지 않을 것입니다, 우리 ITDumpsKR과의 만남으로 여러분은 한번에 아주 간편하게 Oracle 1Z0-1109-25 시험을 패스하실 수 있으며, Oracle 1Z0-1109-25 자격증으로 완벽한 스펙을 쌓으실 수 있습니다,

Oracle 1Z0-1109-25 시험요강:

주제	소개
주제 1	Managing Containers Using Container Orchestration Engine: This part assesses the abilities of Kubernetes Administrators and Containerization Specialists in managing Oracle Container Engine for Kubernetes (OKE). It covers cluster creation, scaling, upgrades, networking, storage, and security configurations to optimize containerized applications in OCI environments.
주제 2	Implementing Monitoring and Observability (O&M): This section evaluates the expertise of Site Reliability Engineers (SREs) and Monitoring Specialists in tracking system performance using OCI Monitoring, Logging, and Events services. It analyzes metrics, logs, and events to maintain system reliability and troubleshoot operational issues effectively.
주제 3	- Enabling DevSecOps: This domain measures the skills of Security Engineers and DevSecOps Practitioners in integrating security into DevOps workflows. It includes managing encryption keys with OCI Vault, securing CI - CD pipelines, and ensuring container image security to align with DevSecOps best practices.

주제 4	• Configuring and Managing Continuous Integration and Continuous Delivery (CI CD): This section tests the knowledge of CI • CD Engineers and Automation Specialists in automating the software lifecycle using OCI DevOps Service. It includes managing source code repositories, configuring build • deployment pipelines, and creating artifacts for automated deployments across environments.

최신버전 1Z0-1109-25퍼펙트 최신버전 덤프 시험공부자료

ITDumpsKR에서는 소프트웨어버전과 PDF버전 두가지버전으로 덤프를 제공해드립니다. PDF버전은 구매사이트에서 무료샘플을 다운받아 체험가능합니다. 소프트웨어버전은 실력테스트용으로 PDF버전공부후 보조용으로 사용 가능합니다. Oracle 인증 1Z0-1109-25덤프 무료샘플을 다운받아 체험해보세요.

최신 Oracle Cloud Infrastructure 1Z0-1109-25 무료샘플문제 (Q32-Q37):

질문 # 32

How do OCI DevOps Deployment Pipelines reduce risk and complexity of production applications?

- A. By reducing change-driven errors introduced by manual deployments
- B. By working with existing Git repositories and CI systems
- C. By scaling builds with service-managed build runners
- D. By eliminating downtime of production applications

정답: A

설명:

OCI DevOps Deployment Pipelines automate the process of deploying applications to production environments. By using automated, repeatable deployment processes, they help reduce the risk of change-driven errors, which are often introduced during manual deployments. This automation reduces human errors and ensures consistency across environments, thus minimizing complexity and risk in production.

질문 # 33

An operations team wants to leverage the advanced features of Container Engine for Kubernetes (OKE) and requires granular control over cluster add-ons, workload identity, and improved worker node management. They also prioritize strong security measures and require a financially-backed service level agreement (SLA) for Kubernetes API server uptime.

Which type of cluster should they choose to meet their requirements?

- A. Specialized clusters
- B. Enhanced clusters
- C. Federated clusters
- D. Virtual clusters

정답: B

설명:

Enhanced clusters in Oracle Container Engine for Kubernetes (OKE) provide advanced features such as granular control over cluster add-ons, workload identity, and improved worker node management. They also offer strong security measures and come with a financially-backed service level agreement (SLA) for Kubernetes API server uptime, ensuring higher reliability and support for production workloads.

질문 # 34

Your team is responsible for deploying a new version of an application that is being used by your company's finance department. The application is critical to the department's operations, and any downtime could have serious consequences.

What is the recommended approach in OCI for creating environments for this scenario?

- A. Configure two OKE clusters, selecting the blue-green traffic shift strategy using a load balancer.
- B. Deploy the application to two separate OCI tenancies to ensure complete isolation between environments.
- C. Use a single Kubernetes cluster with two node pools, one for the blue-green environment and one for the canary environment.
- D. Use a single OCI region and create two separate Virtual Cloud Networks (VCNs), one for the blue environment and one for the green environment.

정답: C

설명:

For critical applications, such as the one used by the finance department, a blue-green deployment strategy is recommended to ensure minimal or zero downtime during upgrades. The blue-green strategy involves running two separate environments: blue (current version) and green (new version).

질문 # 35

You're using Oracle Cloud Infrastructure (OCI) DevOps to automate your application deployment for frequent releases. In one of your automation steps, you'll create a deployment pipeline.

What does this deployment pipeline do in OCI DevOps?

- A. It is a set of stages for your build process for building, testing and compiling software artifacts.
- B. It takes a commit ID from your source code repositories and uses that source code to run your build instructions.
- C. It is a sequence of steps for delivering and deploying your artifacts to a target environment.
- D. It is used to store, manage, develop source code with OCI DevOps Code Repositories.

정답: C

설명:

A deployment pipeline in OCI DevOps is used to automate the deployment of application artifacts to a target environment. It is a sequence of stages that includes steps such as approvals, traffic shifts, manual interventions, and the actual deployment of the artifacts to environments like Kubernetes clusters or compute instances.

질문 # 36

As a DevOps engineer working on containerizing a microservices-based application to be hosted on OCI Cloud platforms, which step can help ensure that the container images have not been modified after being pushed to Oracle Cloud Infrastructure Registry (OCIR)?

- A. Enabling scanning of container images stored in OCI Registry
- B. Signing the image using the Container Registry CLI and creating an image signature that associates the image with the master encryption key and key version in the Vault service
- C. Scanning the image upon ingestion and comparing the image size for changes
- D. Deploying a manifest to the Kubernetes cluster that references the container image and its unique hash

정답: B

설명:

To ensure that container images have not been modified after being pushed to the Oracle Cloud Infrastructure Registry (OCIR), you should sign the image. This involves using the Container Registry CLI to create a digital signature for the image, which associates the image with a master encryption key and key version stored in the OCI Vault service. This signature can then be verified at the time of deployment, ensuring that the image has not been tampered with since it was signed.

질문 # 37

.....

ITDumpsKR에서 출시한 Oracle인증 1Z0-1109-25 덤프는 시험문제점유율이 가장 높은 시험대비자료입니다. 실제 Oracle인증 1Z0-1109-25 시험문제유형과 같은 형식으로 제작된 Oracle인증 1Z0-1109-25 시험공부자료로서 ITDumpsKR 덤프의 실용가치를 자랑하고 있습니다. 덤프를 공부하여 시험불합격하시면 덤프비용은 환불처리해드립니다.
